I am writing in support of granting the permit for operating C &H hog farm. Time and time again, true science has shown that this private business does not jeopardize the environment. We cannot continue to allow fringe groups to bully and harass citizens who are operating a business on their own private property. These people have jumped through every hoop presented to them to prove they are operating in a safe and efficient manner.

Let's let them go on about their private business making a living and assisting the rest of the few farmers we have left trying to feed the world.
