Permit # 5264-W comments

I think and my research has confirmed that the C&H Hog Farm draft permit 5264-W was improperly approved by ADEQ and should be denied because -

1. the NPDES permit assume water discharge not hog feces and it violates Reg 5.301
2. This is a KARST area and all the facility and most of the spreading fields are atop the karst. It doesn't take a rocket scientist to know that is so so WRONG and absolutely will pollute. Because of the inarguable presence of karst and the inordinate risks it poses, particularly in the watershed of the Buffalo National River, this permit should be denied.
3. It does not comply with AWMFH - there are numerous examples of non-compliance that are being supplied to you via the Buffalo River Alliance and I concur with those examples.
4. There are already a raised level of nitrates in Big Creek which can be correlated to the initial C&H permit.
5. C&H is trying to increase the number of swine.  
etc etc etc etc etc

Do your job, do diligence and do not grant a No-Discharge permit and revoke the current permit for the C&H Hog Factory. STOP THE POLLUTION OF THE BUFFALO RIVER, A NATIONAL TREASURE.
