Questions Comments:

Hi. I have been reading about the permitting process and approval of C&H Hog farms. I have been so very sorry that ADEQ has ever allowed such an operation come to be SO close to our national treasure of the Buffalo National River watershed. I am not a geologist but have read your latest report on the most recent drilling samples. If no contamination was found now it was hard to believe. It will just be a matter of time before the leaching of the limestone in the karst topography DOES find its way into the Buffalo. And THEN way? Take away the pigs? How can you even think that this is not a disaster in the making? Really? Please reconsider your decision on this and START the scale back and eventual closure of C&H. I am just a concerned citizen and lover of the BNR, but I have a voice and a heart & wish to put both against such an operation as this. The newspaper said this was open to public comment, but this doesn't seem very easy. I guess that on porous? Anyway, if there is another or better way to

comment please let me know. Please please please save our River. Thank you, David Finch
