---

The Arkansas Department of Environmental Quality did not adequately allow for public notice and public input in 2012 when it quickly and quietly allowed a 'no discharge' permit for C & H hog farms to build a facility on the Buffalo River watershed. This was supposedly done without even the knowledge of the 'then' director of ADEQ or Governor Beebe. The issuance of this permit shows a total disrespect for our unique and beautiful National River. It is a national disgrace and an increasing source of embarrassment for our natural state. This facility which is spreading liquified hog manure over hundreds of acres of the Buffalo watershed should be removed. This act might restore the belief that the ADEQ actually works to preserve the quality of the natural environment of Arkansas.
