Re: Regulation 5 Permit C&H Hog Facility

I object to the "regulation 5" permit being issued to the C&H Industrial Hog Facility. The original general permit was issued without forethought, future planning and considerations (the facility NOW needs 599 more acres to spread untreated hog manure), or a comprehensive proper environmental assessment. The facility STILL sits atop KARST topography. Anything placed on KARST land leaches through the fissures and into the underground water system. The Buffalo National River is being threatened by untreated hog waste seeping into the ground near the Buffalo National River and its tributaries. Deny the regulation 5 permit.
