Please let me commend you & your staff for denying the new Reg 5 No-Discharge Permit application by C&H Hog Farm. I agree with you that the original Permit should never have been issued on karst terrain near the Buffalo River - esp if public comment was allowed in a clear public manner.

I totally support private property rights & appropriate scale farming. We are the Natural State - farming in harmony with land (karst) & neighbors (smell) would be the best practice over industrial scale. Water is a precious shared commodity. Add to this tourism that brings in strong economic value.

I urge you, as director of ADEQ to take steps to permanently implement a moratorium on CAFOs on the Buffalo Nat. River Watershed. As your denying the permit shows, C&H is in the wrong place.

Thank you for PROTECTING
our National River.
