The Buffalo river will be ruined by this hog farm operation. It should be shut down immediately. The karst topography allows the hog waste to enter the groundwater very quickly without any filtration.

I live in North Carolina during the summer and every person I meet knows Arkansas because of the BNR. If this farm continues to exist, sadly I will recommend that they not bother coming. They know all too well how horribly polluting large hog farms are.

Arkansas "The Natural State" will be just another empty slogan if we allow this hog farm.
