**Subject:** HOG FARM ON BUFFALO RIVER

I was told by your office 2 years ago that you were monitoring this hog farm and that you would shut it down at the first sign of pollution. You have documentation from Oklahoma State and University of Arkansas stating that there are signs of pollution and yet you sit there doing nothing. When you look at other states such as North Carolina and Indiana and Iowa there is one thing in common---the streams are all polluted. Why you hid the original notice of the farm on your website that less than 10% of the population would have any idea of this going on is very questionable. You need to think of the people of this state that rely on this river for a living. You need to do what is best for the majority. Hog farms can be put somewhere where they cannot pollute the the streams. This farm could potentially pollute everything downstream. You cannot move the river so you should do you job and protect our natural resources. You are looking to affect everything from Mt Judea to the Mississippi River. Shut down this farm or you will eventually suffer the wrath of people that respect nature and this UNIQUE river. Sadly, if you continue to do nothing you will reach a point that you cannot reverse. PLEASE CLOSE THIS DAMN HOG FARM. You are really being absurd by continuing to ignore scientific facts,

Sincerely,  
Roger Hooks
