To whom it may concern,

I am Reed Storey, a 4th generation farmer in eastern AR. As farmers we are facing harsh push back from environmental groups that are not using scientific facts when they are pushing against farmers and ranchers. I ask that you will help keep C&H Hog Farm in business by issuing them their required permits to stay in business. Sound science has proven they are not posing a threat to the environment with their operation. The people that want them to have to shut down are not even Native Arkansans, they are transplant residents that are not using scientific facts to push their agenda. They are using opinions that are not supported by science. If we are to continue feeding Arkansans and the the world, we need to make decisions based on science not emotion. Please administer the required permits to C&H Hog Farm and keep Arkansas Agriculture strong.

Sincerely,

Reed Storey
