RE: El Dorado Chemical Company – AFIN 70-00040  
Background Flow Study

Dear Mr. Shafii:

El Dorado Chemical Company (EDCC) has been conducting a background storm water flow study for a potential new outfall (combining existing outfalls 006 and 007) at the El Dorado facility. The purpose of the study was to evaluate the feasibility of constructing collection and conveyance facilities to consolidate the existing storm water outfalls and relocating the new outfall approximately one-half mile east.

We have determined that relocation of the consolidated storm water outfall is not a cost-effective option for EDCC, and have terminated the current study prior to its scheduled completion date of June 30, 2008. Outfalls 006 and 007 will not be altered at this time. We therefore request that the background flow ratios for storm water discharges presented in the September 21, 2006 report be utilized by ADEQ for EDCC outfalls 006 and 007 in the renewal of NPDES Permit No. AR0000752.

We appreciate your cooperation in this matter. If you have any question, please call me at 870-863-1400.

Sincerely,  
El Dorado Chemical Company
