Little Rock, Ar.72219-8913

Dear Sirs:

I am scheduling construction work on the Mountain View Wastewater plant that will involve building some new structures and new equipment to improve the treatment of wastewater from the City of Mountain View.

My company has done similar work before, and each time, we ask your department to review our planned purchases for the projects so that a tax exemption could be claimed on the acceptable purchases under Arkansas Regulation 26-52-402 (GR-66).

The improvements involve a new operations building, new electronic controls, an oxidation structure containing aeration equipment, new clarifier equipment, an ultra violet light treatment structure and equipment, new yard piping to these structures and new pumps for existing stations.

All of the new equipment is directly involved in the treatment process, and the structures to build are also directly associated with treating the sewage. This should make the concrete and reinforcing steel exempt, too, as I understand the rule, but I need your review and approval so that I can notify suppliers.

Below is a list we need evaluated:

- Clarifier equipment
- Weir plates and scum baffles
- Submersible pumps
- Aeration equipment
- Weir plates and Density Current Baffles
- Parshall flume & Ultra violet light equipment
- Flow meters and pinch valves
- Reinforcing steel and concrete for treatment structure (oxidation ditch)
- Electronic controls and motor controls
- New yard piping to new structures
- Grating and walkways for aeration and clarifier equipment

Please let me hear from you soon.

Thanks,
