Jessica,

The boilers were removed from service within the previous permit cycle. Therefore, the discharge of boiler blowdown to the wet deck has ceased and is no longer a source. Please let me know if you need anything else.

Amanda,

One more quick question about Anthony Forest Products Company- Urbana Sawmill. The previous permit lists boiler blowdown as a source for Outfall 001. I didn't see that in the application, so I just wanted to double check and see if this was intentionally left out, or maybe overlooked?

Jessica,

I will get you a new Delaware Cert of Good Standing as soon as possible.

Regarding the sanitary, Anthony will obtain additional coverage. The EHP-19 Form and documents have been submitted to the Health Department. Once approved, an NOI for an ARG55 Permit coverage will be submitted to ADEQ.

Amanda,

I'm working on the permit renewal for AR0047384, Anthony Forest Products Company- Urbana Sawmill. The certificate of good standing provided in the permit application from the State of Delaware is more than a year old. Can you please provide updated documentation from the Delaware Secretary of State showing that Anthony Forest Products Company, LLC is in good standing?

Also, in the application summary, you mention that the sanitary wastewater will be discharged under an ARG550000 general permit. I see that this facility currently has an active ARG55 permit with tracking number ARG550398. Is this where the water will be discharged, or are they planning to obtain additional coverage?

Thanks,
Jessica Temple
