To whom it may concern,

Regarding the C&H Hog Farm General Permit ARG590000, there should not be any modifications to the existing permit until all errors, omissions, and land ownership issues in the original permit process are corrected and verified accurate. Remember "the Arkansas Department of Environmental Quality (ADEQ) is the state's main environmental protection agency, charged with protecting, enhancing, and restoring the environment for Arkansans"! It has been determined in a recent federal court ruling that the Environment Assessment of C&H Hog Farm was "cursory and flawed". Until that is corrected any modification to the existing permit flies in the face of the the purpose of the ADEQ and Federal Law!

The C&H Hog Farm should not be allowed to operate until a thorough and scientifically sound Environmental Assessment is completed. C&H Hog Farm is located in an area of karst topography where the spraying and open pond storage of raw sewage poses a scientifically established risk to the safety of both surface and subsurface water supplies.

Please do as your department is charged to protect, enhance, and restore the environment for Arkansans.

Sincerely,
Clayton Davis
