Subject: Buffalo River Hog Farm

I am opposed to the addition of gas flares to the hog farm. Since ADEQ does not regulate odors this will action will approve something that ADEQ can not address in the future. You would approve something that you could not even oversee. The flares will also impact air quality and increase methane and CO2. I can't even imagine local rural residents wanting to see gas flares on their rural landscape.

This farm in the Buffalo Watershed was a bad idea and continuing to allow additional assaults within the watershed is an even worse idea.

Thanks for your consideration,
