**Subject:** NO modifications allowed for the C & H HOG FACTORY Nutrient Management Plan!  
**Date:** Wednesday, April 15, 2015 10:54:22 AM

---

Dear ADEQ,

It is so disappointing that the ADEQ initially failed to do their job in the beginning, by issuing a permit with such an incomplete and fraudulent application and "environmental study" LOL, (what a JOKE) to begin with. What possible reason is there to allow even MORE pollution to occur to this previously, pristine Ozark area by allowing them to modify their nutrient management plan, when they NEVER did ANYTHING right in the application process to begin with and our glorious ADEQ fell flat on their faces in issuing this permit, under such atrociously inadequate circumstances.

WHAT IS WRONG with your whole department to allow this hog factory to be built on karst topography to begin with? You KNOW the studies have already proven that the waste HAS made its way underground and down BIG CREEK into the Buffalo River! How much filth are you going to allow from this hog factory to pollute the FIRST NATIONAL RIVER in the USA???

There is NO reason to allow them anymore leeway to pollute. I say NO NO NO NO to any changes to their original plan, except SHUT IT ALL DOWN and shame on our ADEQ for being swayed from doing their job to PROTECT our environment from BIG AGRI waste!

DO THE RIGHT THING NOW and say NO!
