Dear ADEQ,

The following are reasons I would like you to prevent C&H hog farm from adding a tanker truck.

--Dye tracing studies have confirmed the numerous statements by geologists that the C&H hog factory should not be introducing raw sewage into karst topography.

--Spraying untreated sewage within a community where some residents rely on wells for drinking water, where a school is in close proximity to spray fields, and where thousands of visitors come to swim, canoe, and fish is creating a public health problem.

--Scientific monitoring of water quality in Big Creek where it enters the Buffalo National River has indicated periods when E. coli levels are elevated and dissolved oxygen is low. The ponds may be leaking and/or the run-off from fields (or both) are causing or contributing to the problem.

We need to pay attention to the evidence that is coming to light so that the Buffalo will be there and clean for the people that come after us.

Thank you,

Elizabeth Scott
