Please seriously reconsider building a first CAFO in the karst zone of the Ozarks, above Buffalo River. We cannot afford the pollution, the contamination and the stench of a giant facility right in this pristine region. If the state of Arkansas wants to go this route, do it somewhere else that is not as environmentally sensitive. We Euro-Americans have destroyed alot of resources throughout our short stay in North America. Let's not keep doing it. Time to protect our natural resources, not destroy them, as a hog farm would do to the Buffalo River watershed.
