---

Since the entire permitting process was flawed and did not allow for public input, it is disturbing that we are being asked to comment on only the current narrow modification and are being forced to ignore the totality of the impact this facility is having on the community and the threat it poses to the economics of the region.

Dye tracing studies have confirmed the numerous statements by geologists that the C&H hog factory should not be introducing raw sewage into karst topography.

Spraying untreated sewage within a community where some residents rely on wells for drinking water, where a school is in close proximity to spray fields, and where thousands of visitors come to swim, canoe, and fish is creating a public health problem.
