**Subject:** C&H Hog farm nutrient mgt. modification request  
**Date:** Wednesday, April 15, 2015 3:52:40 PM

---

The recent request by C&H Farms to modify their nutrient management plan greatly concerns me because of the potential for runoff into the Buffalo National River. My concern is this request may be only the beginning of the proverbial "slippery slope" which could lead to further degradation of the fragile eco system in this pristine area.

Specifically, I would like to know if an environmental impact study will be conducted by ADEQ prior to a decision being made. I also request to be kept informed by ADEQ of developments pertaining to this nutrient management modification request.
