Subject: C&H permit modification request
Date: Friday, April 17, 2015 4:00:28 PM

I request that the C & H Hog Farm proposed modification of their Nutrient Management Plan to allow land application of hog wastewater from Waste storage Pond 2 by tanker-wagon be denied. I wrote a letter about this same issue the last time C&H requested such a permit modification and I still believe it would be a terrible mistake to grant this new request.

It is not appropriate and it should not be permitted for C & H to use a vac-tanker truck to apply hog wastewater to any of the fields from Pond 2 without reliable, accurate information about the content of the waste – the amount of Phosphorus, Nitrogen and other nutrients and without reliable data on the level of nutrients, Phosphorus and Nitrogen already applied to some of the fields. The spray fields are located within a karst region of the watershed and have very little depth of soil. That and the close proximaty to Big Creek would cause increased compaction of the soil and aggravate already compromised runoff conditions.

Thank you for the opportunity to comment.
