Dear Sir or Madam,

I am opposed to any measures that would disrupt the lagoons in use by C&H Hog Farms. Any attempts now to put in new liners/covers, or to further modify the lagoons has an extremely high potential of causing excessive contamination of the groundwater and the Big Creek/ Buffalo River Watershed. The proposed measures are stop gap at best, and do little to correct the ongoing contamination caused by the lagoons.

I am also opposed to the installation of flares to burn the hog waste and introduce possible contaminants into the atmosphere in the vicinity of Mount Judea. This is an unproven technology and is still in the experimental stages. It is extremely reckless to put such a system in place given the close proximity of the nearby school and town.

Please note my new phone number and email for your records.

Sincerely,

Laura Timby
