Questions\_Comments:

I guess my question is: if your purpose is to protect, enhance and restore the natural environment for the well-being of all Arkansans, why would you allow a corporate hog farm on the banks of the Big Creek in Newton County? My mother lives about 1/2 mile downstream from this proposed hog farm. It's our sanctuary and our home. We camp there and have family reunions and swim and boat. That creek regularly gets out of banks. I just don't see how it would ever be possible, that 6500 swine excreting fecal matter and urine will not seep into the water...let alone the air pollution and ruined property value. Hog farm odors in general are not healthy. Toxic wastes released into air and water can contain viruses, parasites, antibiotic resistant bacteria, hormones, as well as ammonia, methane,

and hydrogen sulfide. Who will protect our water and air. By the time pollution is registered, it will be too late. And, who will be monitoring the water and air quality? I just don't understand how this can happen. Can you please stop it?! Just on the fact alone that Newton County residents were not notified of the request for a permit and given an opportunity to respond should warrant at least a delay. Can you PLEASE help us? Thank you sincerely, Pam
