Subject: Comment on C&H Modification Request : ARG590001 AFIN 51-00164
Date: Thursday, August 06, 2015 2:49:02 PM

To whom it may concern:

According to engineers who constructed the clay lined sewage ponds, leakage was expected. Now further hog sewage will seep into the earth as sludge is removed to lay new liners. Membrane liners can develop punctures leading to undetected leaks.

There is a school within half a mile of C&H. There has been no public notice of the components of gases now emanating with the odor of sewage, nor have components of the proposed gas flare been projected.

For these reasons, the request for modification should be denied.

Sincerely,

Pam Stewart
