Please deny the C&H Hog Farm proposed modification nutrient management plan that would allow land application of hog wastewater from waste storage pond 2 by tanker-wagon.

It is not appropriate and it should not be permitted for C & H to use a vac-tanker truck to apply hog wastewater to any of the fields from Pond 2 without reliable, accurate information about the content of the waste - the amount of Phosphorus, Nitrogen and other nutrients and without reliable data on the level of nutrients, Phosphorus and Nitrogen already applied to some of the fields.

Based on the recent federal court ruling that requires a redo of the flawed Environmental Assessment of C&H, it is hard to understand how ADEQ can approve this or any other permit modification. By approving this modification request, ADEQ would be saying that C&H can continue in the face of the court ruling, the scientific research, and public concerns.

The Arkansas Department of Environmental Quality (ADEQ) is the state's main environmental protection agency, charged with protecting, enhancing, and restoring the environment for Arkansans. The citizens of Arkansas are asking for environmental protection!

Thank you for allowing me to comment.
