Subject: C&H Hog Farm proposed modification
Date: Thursday, April 16, 2015 9:21:08 PM

I propose that the C&H Hog Farm proposed modification of their Nutrient Management Plan to allow land application of hog wastewater from Pond 2 by their tanker wagon be denied.

It is not appropriate and it should not be permitted for C&H to use a vac-tanker truck to apply hog wastewater to any of the fields from pond 2 without reliable, accurate information about the content of that waste. The amount of Phosphorous, Nitrogen and other nutrients, and without reliable data on the level of nutrients already applied to some of the fields.

Thank you for the opportunity to comment
