I would be in favor of allowing the C&H Hog Farm to modify its permit to allow the lining of ponds and the gas-flare system. It is merely one more safe guard being put in place to protect the possibility of any type of discharge of affluent. It also demonstrates the proof positive of these farmers being "true" stewards of the environment. I cannot imagine anyone being in opposition to such an action, unless they have another agenda other than safe guarding the waters of Big Creek and The Buffalo. Thank you for taking my comments concerning this issue. I appreciate the job your agency is doing despite all the negative review by those who would oppose any type of Farming operation.
