**Subject:** L.A. Darling (ARP000011) July 2010 Semi-Annual Report Response (Corning AR0033979)

Mr. Campbell,

Your July '10 semi-annual pretreatment report was received 7/7/29/10, reviewed, deemed complete and compliant with 40 CFRs 433 and 403.

There is no further necessary action on your part at this time.

Two comments/observations from this office:

- 1) How have you ensured your Fe phosphatizing lines are running at optimum flows? It's felt more water conservation measures could be established for your process, but only you or your QA/QC person can answer this question.
- 2) Recent chemistry seen at one facility in the state has completely eliminated their Fe phosphatizing in prep for powder coating generating no wastewater. If more information is sought, this office could provide you with it. This new chemistry may or not meet your customer specs, but it may be worth looking into. Energy, water, chemical and sludge disposal savings have increased their bottom line.

Thank you for your timely submittal and cooperation,

Sincerely,

Allen Gilliam
