RE: Site Diagram for the L. A. Darling Company facility located in Corning, AR.

Dear Mr. Gilliam:

Enclosed, you will find a Site Diagram for the L. A. Darling Company facility located in Corning, AR. This diagram will show all wastewater collection pits, the on-site wastewater treatment system, as well as a general overview of the facility manufacturing operations.

Please note, that the three (3) powder coating surface preparation washers all dump into adjacent floor drains. These floor drains, in turn, dump into small collection pits. Contents from the small collection pits are then pumped to the main wastewater collection pit adjacent to the on-site treatment system. Please note, that the main wastewater collection pit is divided, so that normal rinse water is segregated from spent cleaner dumps (which only occur 1 to 2 times per year).

It is also important to note, that this facility is currently working on a project to eliminate the large, on-site metals precipitation wastewater treatment system. I have provided details of this project previously, and will provide additional information as we do final analytical work to verify that zinc (from processing galvanized steel), is no longer an issue.

As always, please don't hesitate to contact me should you have questions, or need additional information.
