Subject: Harrison's (AR0034321) 2009 Annual Pretreatment Report Review

Rick,

Your 2009 Annual Pretreatment Report was received (3/29/10), reviewed and determined complete and compliant. No further actions are required at this time.

Comments: Please report all levels of analytes detected above their MQLs on the influent/effluent summary sheet. After talking to your contract lab on 4/2, your 8/27/09 Hg level should have been reported as 1.32 ng/l (mql = 0.5 ng/l), not 0 ng/l.

The Hg levels shown on 6/4/09 and 11/12/09 (21.34 ng/l and 11.69 ng/l) are above the calculated WQ level not to exceed of 10 ng/l. It is recommended to carefully watch these effluent levels and if they persist, a source identification program should be devised and followed. Based on this data alone, the potential exists your next NPDES permit may contain a Hg limit.

Thank you for the timely report,

Allen Gilliam
ADEQ State Pretreatment Coordinator
