Subject: Roach Manufacturing - February 2023 Semiannual Pretreatment Report

Mr. Davis,

Thank you for submitting Roach Manufacturing's (Pretreatment ID ARP001060 & AFIN 56-0031) August 1, 2022 – February 28, 2023 semiannual pretreatment report. The report was reviewed and deemed complete with the reporting requirements in 40 CFR 403.12(e) and the Metal Finishing Standards in 40 CFR 433.

Within the General Comments section of the report, you noted that due to recent fluctuations in results that your facility would start sampling the supply water and include those lab results. Although your comments were not specific on which results you were referring to in this statement, I believe you are referring to both copper and zinc. According to past semiannual reports, results for copper and zinc have increased over these reporting periods. However, these pollutant limits have not been exceeded. Please investigate the cause and identify any potential changes in the facility's processes and/or raw materials that may be contributing to these increases.

In addition, please ensure that custody seals are also utilized and intact when samples are collected.

If you have any questions or concerns, or if I can be of any assistance, please do not hesitate to reach out.

Regards,
