Subject: Emerson (ARP000026) resumption of process at permanent site (Mena AR0036692)

Aaron,

Our phone call this a.m. indicating there has been an ownership change from Emerson to NIDEC was noted. No changes in operations, raw material, etc were to be made; name change only. It was advised a letter to this office state the same identifying a new signatory authority.

I should have been thinking a little clearer/quicker to relay to you these other requests.

Now would also be a good time to submit a new schematic showing the process equipment portrayed as it's laid out on the floorplan. A process description and a process schematic showing wastewater flow to the ultimate sampling point can not be located in your file. One was requested by this office just after the tornado hit last April.

Updated wastewater flow lines/direction, chemical storage areas, work-piece flow, etc should also be detailed on this schematic. It does not have to be to scale, but please include as much detail as you can "work" into the drawing. This would be greatly appreciated helping this State auditor understand your processes generating wastewater flows all the way to the new sampling point.

From what I understand in your files, your die casting operations do not generate any wastewater. Is this true? Depiction of its/their location(s) on the floorplan would be also helpful. A description of how or why there is no wastewater generated from this regulated process would also be appreciated.

Your next semi-annual report will be due this coming October. Hopefully, Mr. Hightower is still in the vicinity for any necessary explanations on this report.

If there are any questions or comments, please feel to contact this office.
