## **Updated Significant Industrial Users List**

- (1) It is advised that the influent and effluent samples are collected considering flow detention time through each plant. **Analytical MQLs must be met for the effluent (and SHOULD be met for the influent) so the data can also be used for Local Limits assessment and NPDES application purposes.**
- (2) This value was calculated during the development of TBL based on State WQ criteria, EPA guidance and ADEQ Pretreatment staff Excel spreadsheets. MAHC and WQ Level/Limit from revised Pretreatment Program submitted to ADEQ November 2007. Program not approved as of December 31, 2008.
- (3) Record the name of any pollutant [40 CFR 122, Appendix D, Table II and/or Table VI] detected and the quantity at which they were detected.

MAHL - Maximum Allowable Headworks Level

WQ - "Water Quality Levels not to exceed" OR actual permit limit.

- (1) It is advised that the influent and effluent samples are collected considering flow detention time through each plant. **Analytical MQLs must be met for the effluent (and SHOULD be met for the influent) so the data can also be used for Local Limits assessment and NPDES application purposes.**
- (2) This value was calculated during the development of TBL based on State WQ criteria, EPA guidance and ADEQ Pretreatment staff Excel spreadsheets. MAHC and WQ level/limit from revised Pretreatment Program submitted to ADEQ November 2007. Program not approved as of December 31, 2008.
- (3) Record the name of any pollutant [40 CFR 122, Appendix D, Table II and/or Table V] detected and the quantity at which they were detected.
