Subject: 03-00051 NABORS LF ground water report

Karen,
I need the following put toward the NABORS LF.

<S:\Facilities\AFIN-01 to 25\03-00051 Nabors Landfill\GW SAMPLING 2017 report\2017 - 1 Quarter Groundwater and Gas Reports.pdf>

Thanks,
Wes

Mr. Bill Sadler, P.G.
ADEQ – Solid Waste Management Division
5301 Northshore Drive
North Little Rock, Arkansas 72118

Subject: **NABORS Landfill**
First Quarter 2017 Groundwater Monitoring and Gas Monitoring Reports

Mr. Sadler,

In accordance with Contract Number 4600033394, SCS Engineers is submitting the First Quarter Groundwater Monitoring Report (GWMR) and First Quarter Gas Monitoring Report summarizing monitoring activities performed in March 2017 at the NABORS Landfill.

If you have questions or comments regarding these reports, please do not hesitate to contact us at (913) 681-0030.

Sincerely,

Dillon Baird, P.E.
Project Engineer

1 INTRODUCTION

This report summarizes the results of the First Quarter 2017 Groundwater Assessment Monitoring event at the NABORS Landfill. Field work was conducted by personnel from SCS Engineers (SCS) on March 27-29, 2017. This report was prepared under the provisions of Contract No. 4600033394 between the Arkansas Department of Environmental Quality (ADEQ) and SCS.

The NABORS Landfill originally operated under Solid Waste Disposal Permit number 0249-S, as issued to RLH, Inc. (RLH) by the Arkansas Department of Environmental Quality (ADEQ) on June 14, 1988. The solid waste permit was transferred to NABORS on August 31, 2005. The NABORS Landfill is currently under Solid Waste Disposal Permit 0249-S1-R2 issued by the ADEQ on August 10, 2006. Although the permit is considered “open”, the landfill is not receiving waste. The ADEQ is currently managing the closure of the site. The analytical work for this sampling event was conducted by Environmental Science Corporation (ESC) of Nashville, Tennessee and groundwater sampling was conducted by SCS.

1.1 SITE DESCRIPTION

The Northwest Arkansas Regional Solid Waste Management District (District) owns both a Class 1 and Class 4 Landfill at the subject site. The NABORS Landfills (herein referred to as Landfill) are located on approximately 700 acres near Three Brothers (Baxter County), Arkansas. The permitted Class 1 area is located in a portion of the SW1/4 of SE1/4 of Section 26, Township 21 North, Range 14 West, and NW1/4 of NE1/4 of Section 35, Township 21 North, Range 14 West. A general geographic location map is included as **FIGURE 1** in **APPENDIX A**. All report Figures are provided in **APPENDIX A**.

1.2 SITE GROUNDWATER MONITORING SYSTEM

The Landfill groundwater monitoring system has evolved over time into a system of monitoring points including both monitoring wells and local springs. The current Assessment Monitoring Program was triggered by the statistically significant occurrence of certain parameters documented in the original Detection Monitoring System. In turn, the required contingencies for Nature and Extent characterization and other regulatory provisions were addressed through the development of the site.

More specifically, the Second Detection Monitoring System for the site that was intended to comply with the provisions of Reg.22.1202 through Reg.22.1204 was approved by ADEQ in 1998. Following the Second Half 2005 sampling event, the ADEQ was notified under the provisions of 22.1204(c) of a statistically significant increase for volatile organic compounds (VOC) at MW-1. These detections were verified during the Second Half 2006 sampling event and the facility began Assessment Monitoring at wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, and MW-7 in June of 2006 as required by Regulation 22.1205. At that time these seven wells were the only permitted facility Detection Monitoring wells.

The Assessment Monitoring program was later expanded to include all the wells/springs listed below when the new permit was issued in August of 2006 (0249-S1-R2), and when the Nature and Extent Characterization was completed. Monitoring was conducted under this program through the Third Quarter 2012.

Assessment Monitoring continued on a quarterly basis as per 22.1205(d) based upon:

- The presence of VOCs at MW-1
- Detected concentrations of arsenic at various wells, some of which were above the Groundwater Protection Standard (GWPS)
- Vinyl chloride detections at CAO-1 which historically exceed the GWPS.

The current groundwater monitoring system for the NABORS Landfill consists of twenty-four (24) monitoring wells, thirteen (13) springs, and a Leachate sample for a total of thirty-eight (38) Assessment Monitoring points. These sampling points are listed below and are located on **FIGURE 2**.

NABORS GROUNDWATER ASSESSMENT MONITORING POINTS					
Wells			Springs		Leachate
MW-1	CAO-1	MW-509D	Entrance Seep	Class I Draw	Leachate
MW-1R	CAO-2	MW-577	Spring A	Class IV Draw	
MW-2	CAO-3	MW-633D	Spring B	SP-4*	
MW-3	NAB-1	MW-689D	TSP-1*	SP-5*	
MW-4	NAB-2	NE-2	TSP-2*	SP-7	
MW-5	NAB-3	NE-3	TSP-3	Spring near NE-3	
MW-6	NAB-4	NE-4	TSP-4**		
MW-7	NAB-7	NE-6			
	NAB-8				
Notes: • <i>NAB-1 is damaged at approximately 68 feet below top of casing and is no longer being sampled.</i> • <i>NE-4 will be sampled in place of NAB-1 at the request of ADEQ (Doc. 71567, April 18, 2017)</i> • <i>*Covered by landfill construction and no longer exist</i> • <i>**Dry</i>					

2 GROUNDWATER SAMPLING

The First Quarter 2017 Assessment Monitoring sampling event was conducted on March 27-29, 2017. A representative of SCS collected samples from twenty-three (23) monitoring wells (MW-1 through MW-7, MW-1R, MW-509D, MW-577, MW-633D, MW-689D, CAO-1, CAO-2, CAO-3, NAB-2, NAB-3, NAB-4, NAB-7, NAB-8, NE-2, NE-3 and NE-6) and eight (8) springs (Spring A, Spring B, TSP-3, SP-NE-3, Class I Draw Spring, Class IV Draw Spring, SP-7, and the Landfill Entrance Seep). The current *Groundwater Sampling and Analysis Plan* dated December 2011 (ADEQ document #61474) was utilized for this sampling event. The procedures for obtaining groundwater samples, parameters analyzed, sample preservation and handling are discussed in the following sections.

2.1 WATER LEVEL DETERMINATION

Prior to evacuating each well for sampling, the depth to water was measured using an electronic water level probe. The measurements were taken to the nearest 0.01-foot from the top of the well casing and the information was used to calculate the volume of water in the well. Because non-dedicated equipment was used to obtain water levels, procedures were instituted to insure the samples were not contaminated. The electronic water level probe is constructed of inert materials and was de-contaminated with distilled water prior to use at each well.

2.2 WELL EVACUATION

The water in a well prior to sampling may not be representative of in-situ groundwater quality. Therefore, the groundwater technician used an electric submersible pump with dedicated sampling tubing to purge a minimum of three casing volumes at a rate that did not excessively agitate the recharge water. Since non-dedicated equipment was used to purge the wells, procedures were utilized to insure the samples were not contaminated. Clean, non-powdered, nitrile gloves were worn by the sampling personnel. Measures were taken to prevent surface soils from coming in contact with the purging equipment and lines, which could introduce contaminants to the well.

2.3 EQUIPMENT DECONTAMINATION PROCEDURES

All equipment that was used in the monitoring wells and had contact with the samples was thoroughly cleaned before use. These devices included a water level probe and a submersible pump. The water level probe was washed with potable water and phosphate-free laboratory detergent. Next, the probe was rinsed with potable water and finally, rinsed with distilled water. The water level probe was then placed in a plastic bag to reduce contact with air and transported into the field. After a water level was measured at each well, a paper towel was soaked with distilled water and as the probe was reeled up the tape and probe were wiped clean.

The submersible pump was initially flushed with potable water and phosphate-free detergent. Next, the pump was rinsed with potable water, and finally rinsed and flushed with distilled water in a portable decontamination tub prior to use in each well. The pump was transported in a clean, sealed tub to minimize contact with the air prior to use at each well.

2.4 SAMPLE EXTRACTION

The technique used to withdraw each groundwater sample from the wells was selected based on consideration of the parameters analyzed in the sample. To insure the groundwater sample is representative of the formation, it is important to minimize physically altering or chemically contaminating the sample during the withdrawal process. In order to minimize the possibility of sample contamination the groundwater technicians did the following:

- Made sure clean sampling equipment was not placed directly on the ground or other contaminated surfaces prior to insertion into the well.
- Gently lowered and retrieved sampling equipment in order to prevent undue disturbance of the water column. Monitoring wells were purged and samples were collected using a submersible pump. Wells that went dry during purging were allowed to recharge for approximately 24 hours and samples were collected using a disposable bailer.
- Transferred samples to the appropriate containers in a manner that minimized agitation and aeration.

Samples were collected and containerized in the order of volatilization sensitivity of the parameters. Spring samples are collected where able, by utilizing a grab sample method by holding the sample bottle within the spring water flow path. The list of parameters analyzed is presented in **TABLE 1**.

TABLE 1. ASSESSMENT MONITORING CONSTITUENTS (AMC)

<u>APPENDIX 1 VOLATILES</u>	<u>INDICATOR PARAMETERS</u>	<u>INORGANICS</u>
ACETONE	CHLORIDE	ANTIMONY
ACRYLONITRILE	pH	ARSENIC
BENZENE	SULFATE	BARIUM
BROMOCHLOROMETHANE	TDS	BERYLLIUM
BROMODICHLOROMETHANE	TOC	CADMIUM
CHROMIUM	SPECIFIC CONDUCTANCE	CHROMIUM
CARBON TETRACHLORIDE		COBALT
CARBON DISULFIDE		COPPER
CHLOROBENZENE		LEAD
CHLOROETHANE		NICKEL
CHLOROFORM		SELENIUM
DIBROMOCHLOROMETHANE		SILVER
1,2, DICHLOROBENZENE		THALLIUM
1,4, DICHLOROBENZENE		VANADIUM
TRANS- 1,4-DICHLORO-2-BUTENE		ZINC
1,1 DICHLOROETHANE		IRON
1,2 DICHLOROETHANE		MANGANESE
CIS-1,2,-DICHLOROETHYLENE		TIN
TRANS-1,2-DICHLOROETHYLENE		
1,2-DICHLOROPROPANE		
CIS-1,3-DICHLOROPROPENE		
TRANS-1,3-DICHLOROPROPENE		
ETHYLBENZENE		
2-HEXANONE		
METHYL BROMIDE		
METHYL CHLORIDE		
METHYLENE BROMIDE		
METHYLENE CHLORIDE		
METHYL ETHYL KETONE		
METHYL IODIDE		
4- METHYL-2-PENTANONE		
STYRENE		
1,1,1,2-TETRACHLOROETHANE		
1,1,2,2,-TETRACHLOROETHANE		
TETRACHLOROETHANE		
TOLUENE		
1,1,1-TRICHLOROETHANE		
1,1,2-TRICHLOROETHANE		
TRICHLOROETHYLENE		
TRICHLOROFLUOROMETHANE		
1,2,3-TRICHLOROPROPANE		
VINYL ACETATE		
VINYL CHLORIDE		
XYLENE		

The collection order for the common groundwater parameters was as follows:

- Volatile Organic Compounds (VOCs)
- Total Organic Carbon (TOC)
- Sulfate, Chloride, and Total Dissolved Solids (TDS)
- Total Metals

2.5 FIELD TESTING

Some of the parameters evaluated are physically or chemically unstable and were measured immediately after collection by the SCS representative using a flow cell. Examples of unstable elements or properties include pH and temperature. Although the turbidity and specific conductance (inverse of electrical resistance) of a substance are relatively stable, these parameters were also measured in the field. This information was recorded on *Groundwater Monitoring Sampling Records* presented in **APPENDIX B**. A summary of the field measurements for the First Quarter 2017 Assessment Monitoring sampling event is presented in **TABLE 2**.

TABLE 2. FIRST QUARTER 2017 FIELD MEASUREMENTS

Well #	Date	Time	TOC Elev. (ft.)	GW Depth (ft.)	GW Elev. (ft.)	pH (SU)	Temp. (°C)	Spec. Cond. (uS/cm)	Turbidity (NTU)
MW-1R	3/28/2017	1708	1067.57	69.50	998.07	6.58	17.0	1537	8.66
MW-1	3/28/2017	1640	1067.26	67.22	1000.04	6.52	16.8	1681	5.05

*NE-3	3/28/2017	0730	846.91	7.16	839.75	7.48	11.1	614	2.52
NE-6	3/29/2017	0942	901.42	6.21	895.21	7.23	13.4	639	3.39

*Note: NAB-8 and NE-3 went dry during purging (at approx. 3 and 4.5 gallons, respectively)

2.6 FIELD QA/QC PROCEDURES

For QA/QC purposes, a duplicate sample of MW-6 was collected and labeled Dupe. Procedures utilized for collecting the duplicate sample were identical to the sampling protocol detailed in Section 2.4 and collected at the same time as the MW-6 samples. The duplicate sample was collected to verify the consistency and precision of the sampling and testing procedures.

A field blank was also collected and labeled FB. The field blank consisted of distilled water poured into a sample container under field conditions and returned for laboratory analysis. The SCS field representative prepared the field blank for all the required monitoring parameters. The field blank was used to verify that the sample collection and handling process or ambient conditions, such as airborne materials or other factors unique to the sampling area did not affect the quality of the samples. A volatile organic analyte (VOA) trip blank was also included as part of the field QA/QC procedures. The trip blank was prepared in the laboratory utilizing de-ionized water, transported to the site, handled as a sample (yet never opened in the field), and returned to the laboratory for analysis. Trip blank results are used to verify that the sample containers were adequately prepared/handled in the laboratory, and that the groundwater samples were protected from contamination during transport.

An equipment blank, labeled EB, was prepared on site by pouring de-ionized water over the water level probe, gloves, and through a disposable bailer. Equipment blank results are used to verify that proper protocols for collection of samples and decontamination of equipment were followed.

2.7 HANDLING/TRANSPORT/CUSTODY

Samples were accompanied by a Chain-of-Custody record that includes the name of the facility, collector's signature, monitoring point identification number, date, time, type of sample, number of containers, and analyses required. Samples collected from the Landfill site were placed in sample containers provided by the Laboratory. Containers were certified clean by the supplier and transported with ice to preserve samples.

Attached to the sample container at the time of collection is the sample label. The following information is recorded on the sample label:

- Project or facility name
- Sample type
- Sample location number (well number)
- Preservation type
- Sampling date and time
- Sample collector's name or initials

Documentation for the sample collection process and other important information was recorded on the chain of custody. The standard format includes the date, time, type of sample, code for sample analysis, unique sample number, and sampling location. The entries were signed by the sample collector.

2.8 SAMPLE PRESERVATION

In accordance with the facility's *Sampling and Analysis Plan*, the samples were placed in an ice chest for preservation and cooled to approximately 4 degrees Celsius. Custody was retained by a SCS representative from the time of collection until shipment via Federal Express to Environmental Science Corp. (ESC) in Nashville, Tennessee. Laboratory analytical results and a copy of the ESC Chain-of-Custody form are included in **APPENDIX C**.

3 FIRST QUARTER 2017 ASSESSMENT MONITORING EVENT

The sampling results summarized in this report are for the First Quarter 2017 Assessment Monitoring Event. The results for this event, conducted on March 27-29, 2017 are provided in the following sections, tables, and appendices. In addition, all historical groundwater data was evaluated statistically to determine if significant differences exist between compliance and background concentrations at each monitoring point.

3.1 GROUNDWATER ELEVATION, FLOW DIRECTION & RATE

There are currently twenty-three monitoring wells located around the Landfill area. Water level elevations were measured for monitoring wells MW-1R, MW-1, MW-2, MW-3, MW-4, MW-5, MW-6, MW-7, CAO-1, CAO-2, CAO-3, NAB-2, NAB-3, NAB-4, NAB-7, NAB-8, NE-2, NE-3, NE-6, MW-509D, MW-577, MW-689 and MW-633D during the First Quarter 2017 event. **TABLE 2** summarizes the results of the water level and field measurements for this event. The highest water level elevation during this event was measured in monitoring well CAO-1, located east of Area 1-2, and the lowest elevation occurred in monitoring well NE-3, located southeast of Area 1-3. A potentiometric surface map was constructed utilizing the water levels measured during the First Quarter 2017 Assessment Monitoring Event and is presented as **FIGURE 2**.

As **FIGURE 2** indicates, groundwater within the uppermost aquifer was found to flow to the west/northwest in Area 1-2 and generally to the east-southeast in Area 1-3. Based on this flow pattern, monitoring wells MW-1, MW-1R, MW-7, and NAB-7 are upgradient wells, and wells MW-2, MW-3, MW-4, MW-5, MW-6, NAB-2, NAB-3, NAB-4, NAB-8, MW-509D, MW-633D, MW-577, MW-689, CAO-1, CAO-2, and CAO-3 monitor the groundwater downgradient of the landfill.

Based on the principles of Darcian flow, the average linear velocity (groundwater flow rate) during the First Quarter 2017 Assessment Monitoring event was calculated utilizing the following equation:

$$V_x = (K \cdot i) / n_e$$

where,

V_x is the average linear velocity (length/time),
 K is the hydraulic conductivity (length/time),
 i is the hydraulic gradient (length/length),
and n_e is the effective porosity (decimal).

The hydraulic gradient in the Area 1-2 portion of the Landfill was calculated by comparing upgradient well, MW-1R, to the most directly downgradient well, MW-5. The change in head of 70.82 feet between the two wells over a distance of approximately 1,432 feet produces a hydraulic gradient of 0.049 (ft/ft).

The hydraulic gradient in the Area 1-3 portion of the Landfill was calculated by comparing upgradient well, MW-1R, to the most directly downgradient well, NAB-2. The change in head of 74.21 feet between the two wells over a distance of approximately 693 feet produces a hydraulic gradient of 0.107 (ft/ft).

Grubbs, Garner, & Hoskyn, Inc. reported an average hydraulic conductivity of 1.0×10^{-3} cm/sec in the site's *Hydrogeologic and Geotechnical Report* (1987). This hydraulic conductivity for the uppermost aquifer was used to aid in the flow rate calculations. SCS utilized an estimated porosity for this report of 10 percent for dolomite bedrock (Freeze and Cherry, 1979). An effective porosity was then determined by multiplying the porosity by 0.90 (90 percent). Effective porosity is always equal to or less than the porosity and utilizing 90 percent is a conservative approach since part of the total porosity is occupied by static fluid held to the mineral surface by surface tension. The effective porosity determined was nine percent.

Area 1-2:

$$V_x = [(1.0 \times 10^{-3} \text{ cm/sec})(0.049)]/(0.09) = 5.50 \times 10^{-4} \text{ cm/sec or } \mathbf{1.558 \text{ ft/day}}$$

Area 1-3:

$$V_x = [(1.0 \times 10^{-3} \text{ cm/sec})(0.107)]/(0.09) = 1.19 \times 10^{-3} \text{ cm/sec or } \mathbf{3.373 \text{ ft/day}}$$

3.2 STATISTICAL EVALUATION

The historical statistical database (provided in **APPENDIX D**) was first reviewed for anomalies or outliers using the statistical program SANITAS™ for Groundwater. There were no statistical outliers calculated during this event.

In addition to outlier analysis, parameter concentrations were plotted versus time for each of the parameters. These graphs are included in **APPENDIX E**. Graphs provide a summary of the historical data that are more easily visualized on graphs than tables. Another important application of these graphs is for detecting possible trends or drifts in the data from a given well. Furthermore, when visually comparing the plots of all the wells for a parameter, it is easy to identify the variability among the wells. This variability may be spatial or due to contamination from an off-site source.

An important consideration in any graphical presentation is whether the data is significantly influenced by seasonal changes. If this is the case, then the data should be adjusted for seasonal influences. In order to make such a determination, there should exist at least eight and preferably sixteen observations for each parameter. However, seasonal influences will likely be first suspected from visual observation of the data graphs discussed above. Based on the data generated thus far and as stated in previous reports, it is suspected that concentration levels are significantly influenced by the amount of precipitation and the timing of individual precipitation events in relation to sampling events.

The methods used to evaluate the groundwater data for the statistical analysis are based on statistical procedures outlined in the *Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities (Unified Guidance, March 2009)*. The SANITAS™ for Groundwater program was utilized to statistically evaluate the data for the First Quarter 2017 sampling event. A brief description of the procedures used in the statistical evaluation is provided on each statistical plot (See **APPENDIX E**).

3.2.1 Sen's Slope/Mann-Kendall

When used in conjunction with one another, the Mann-Kendall test for temporal trend and the Sen's slope estimate are two types of Evaluation Monitoring Statistics useful in determining the significance of an apparent trend and to estimate the magnitude of that trend. The Sen's Slope/Mann-Kendall was

performed on all detected constituents from each well to determine whether a statistical trend is present in the data. The results of the Sen's Slope/Mann-Kendall plots associated with the First Quarter 2017 sampling event are presented in **APPENDIX E**. A number of constituents presented a false trend due to a change in reporting limits. Only constituents with true statistical trends in detected concentrations are presented below:

Well	Significant Decreasing Trends	Significant Increasing Trends
CAO-1	1,1-dichloroethane, cis-1,2-dichloroethene, cobalt, lead, nickel, sulfate, zinc	arsenic, barium, benzene, chloride, iron, total organic carbon
CAO-2	sulfate	chloride
CAO-3	lead, sulfate	chloride

NE-6	sulfate, zinc	

3.2.2 Results of Assessment Monitoring Statistical Analyses

Confidence intervals are the recommended statistical strategy for assessment monitoring. The Groundwater Protection Standards (GWPS) utilized in the statistical evaluation are included in **TABLE 3**. The statistical evaluation was conducted in accordance with recommended procedures found in the Unified Guidance. Confidence Intervals were constructed, with a minimum of 4 events, for any metal or VOC constituent detected in concentrations greater than the PQL. Confidence Interval statistical analysis was not performed for indicator parameters. Data evaluation consisted of the establishment of 95% Lower Confidence Limits (LCLs) and 95% Upper Confidence Limits (UCLs). If one, or more, of the 4 events used for the confidence interval was above the constituent's MCL and the calculated coefficient of variation (CV) for the population was greater than 0.5 then additional evaluations were performed for that well/constituent pair. If after further evaluation a population with a CV under the 0.5 (Unified Guidance 7.4.1) threshold could not be established a visual inspection of the data was performed to identify shift points in the data set. From these shift points the most recent stable population was used in the calculation

of confidence limits. If the 95% LCL of one parameter exceeds action levels defined as Maximum Contaminant Levels (MCLs), if applicable, or a health-based alternate Groundwater Protection Standards (GWPS) as stipulated in Section 22.1205(d)(4), the site will conduct an Assessment of Corrective Measures in coordination with ADEQ.

The results of the assessment monitoring statistical evaluations indicated the concentrations of the following parameters at the following wells, statistically exceeded the established Groundwater Protection Standards.

FIRST QUARTER 2017 GWPS EXCEEDANCES

MONITORING POINT	AMC
CAO-1	1,1-dichloroethane, arsenic, cobalt, vinyl chloride
MW-1	1,1-dichloroethane, arsenic, cobalt
MW-1R	1,1-dichloroethane, arsenic, cobalt, vinyl chloride

The results of the First Quarter 2017 Sampling Event indicate that AMC concentrations statistically exceed the GWPS at sample points CAO-1, MW-1, and MW-1R

The results of the confidence interval evaluation associated with the First Quarter 2017 sampling event are presented in **APPENDIX E**. In accordance with Regulation 12.1205(d)(4), an *Assessment of Corrective Measures Report* (June 2015, Document 67822) was submitted to ADEQ for approval.

TABLE 3. Groundwater Protection Standards (Regulation 22.1205 (h)(I))

Compound	MCL**	RBSL***	Compound	MCL**	RBSL***
Total Arsenic	0.01 mg/l		Chloroethane (Ethyl Chloride)	--	21,000 ug/l
Total Barium	2 mg/l		Vinyl Chloride	2 ug/l	
Total Cadmium	0.005 mg/l		1,1-Dichloroethane	--	2.7 ug/l
Total Cobalt	--	0.011 mg/l	cis-1,2-Dichloroethene (-ethylene)	70 ug/l	--
Total Chromium	0.1 mg/l	--	Tetrachloroethene (-ethylene)	5 ug/l	
Total Nickel	--	0.39 mg/l	1,4-dichlorobenzene	75 ug/l	
Total Zinc	--	6 mg/l	Methylene Chloride	5 ug/l	
Total Selenium	0.05 mg/l		Toluene	1,000 ug/l	
Tin	--	12 mg/l	Trans 1,2-dichloroethylene	100 ug/l	
Silver	--	0.094 mg/l	Xylene (Total)	10,000 ug/l	
Thallium	0.002 mg/l		Ethyl Benzene	700 ug/l	
Vanadium	--	0.086 mg/l	Carbon Disulfide	--	810 ug/l
Antimony	0.006 mg/l		Chlorobenzene	100 ug/l	
Beryllium	0.004 mg/l		Cyanide	200 ug/l	
Copper	1.3 mg/l		Mercury	0.2 mg/l	
Lead	0.015 mg/l		Trichloroethene (-ethylene)	5 ug/l	
Benzene	5 ug/l				
Available MCL's will be used as the Groundwater Protection Standard **MCL = Maximum Contaminant Levels (current or proposed) ***RBSL = Risk-Based Screen Levels (EPA Region 6 Human Health Medium Specific Screening Level) Residential Water (Residential Scenario: Ingestion and Inhalation)					

3.3 LABORATORY ANALYTICAL RESULTS

The analytical laboratory results for the First Quarter 2017 Assessment Monitoring sampling event are summarized in **TABLE 4** and **TABLE 5**. The Tables present a comparison of parameter concentrations from the current sampling event to the applicable Primary Drinking Water Standards-Maximum Contaminant Levels (MCLs) and Secondary Drinking Water Standards (SDWS). The SDWS are set primarily for aesthetic reasons and are generally not considered health-based criteria. Constituents covered by the SDWS are those which may adversely affect the aesthetic qualities of drinking water such as taste, odor, color, and appearance and are not federally enforced.

Primary Drinking Water Standard MCL exceedances noted for well samples consisted of arsenic at MW-1, MW-1R, and CAO-1; 1,1-dichloroethane at MW-1 and MW-1R; and vinyl chloride at MW-1, MW-1R and CAO-1 (see **TABLE 4** and **TABLE 5**) during the First Quarter 2017 Assessment Monitoring event.

As shown in **TABLE 5**, Appendix 1 volatile organic compound (VOC) detections in well samples above the PQL consisted of the following:

- **MW-1** – chlorobenzene, 1,1-dichloroethane, cis-1,2-dichloroethene, Trichloroethene, and vinyl chloride
- **MW-1R** – chlorobenzene, 1,4-dichlorobenzene, 1,1-dichloroethane, cis-1,2-dichloroethene, and vinyl chloride
- **CAO-1** – benzene, 1,1-dichloroethane, and vinyl chloride
- **MW-633D** - 1,1-dichloroethane

Because VOCs are not naturally occurring, detected concentrations above the PQL are considered SSIs.

3.4 QUALITY ASSURANCE/QUALITY CONTROL RESULTS

A QA/QC comparison for the First Quarter 2017 Assessment Monitoring event is presented in **TABLES 4** and **5**. The duplicate sample was somewhat consistent with the representative sample during this event with the exceptions as follows. Copper and iron were reported as non-detect in the well sample but had value detections in the duplicate sample; total organic carbon was a detection above the PQL in the well sample and a “J” value detection in the duplicate sample; Lead had a “J” value detection in the well sample and was non-detect in the duplicate sample. The field equipment, and trip blank had no VOC detections, during the First Quarter 2017 Assessment Monitoring event.

Values in **bold** exceed applicable Primary Drinking Water EPA Standards / Values with a "B" suffix denotes the same analyte is found in the associated blank.

4 CONCLUSION

Based on the results of the First Quarter 2017 Assessment Monitoring and analytical testing, SCS reached the following conclusions:

Groundwater Flow:

- **FIGURE 2** represents a potentiometric surface map constructed from water levels measured during the First Quarter 2017 Assessment Monitoring event. As indicated, groundwater within the uppermost aquifer was found to flow in a west-northwesterly direction in the Area 1-2 portion of the site. This flow relationship is consistent with the flow direction indicated by historical water level measurements. The groundwater flow direction in the Area 1-3 portion of the site is to the east-southeast. The average linear velocity in Area 1-2 is estimated at 5.50×10^{-4} cm/sec or **1.558 ft/day**. The average linear velocity in Area 1-3 is estimated at 1.19×10^{-3} cm/sec or **3.373 ft/day**.

Analytical Results:

- A QA/QC comparison for the First Quarter 2017 Assessment Monitoring event is presented in **TABLES 4 and 5**. The duplicate sample was somewhat consistent with the representative sample during this event with the exceptions as follows. Copper and iron were reported as non-detect in the well sample but had value detections in the duplicate sample; total organic carbon was a detection above the PQL in the well sample and a “J” value detection in the duplicate sample; Lead had a “J” value detection in the well sample and was non-detect in the duplicate sample. The field equipment, and trip blank had no VOC detections, during the First Quarter 2017 Assessment Monitoring event.
- Primary Drinking Water Standard MCL exceedances noted for well samples consisted of arsenic at MW-1, MW-1R, and CAO-1; 1,1-dichloroethane at MW-1 and MW-1R; and vinyl chloride at MW-1, MW-1R and CAO-1 (see **TABLE 4** and **TABLE 5**) during the First Quarter 2017 Assessment Monitoring event.
- As shown in **TABLE 5**, Appendix 1 volatile organic compound (VOC) detections in well samples above the PQL consisted of the following:
 - **MW-1** – chlorobenzene, 1,1-dichloroethane, cis-1,2-dichloroethene, Trichloroethene, and vinyl chloride
 - **MW-1R** – chlorobenzene, 1,4-dichlorobenzene, 1,1-dichloroethane, cis-1,2-dichloroethene, and vinyl chloride
 - **CAO-1** – benzene, 1,1-dichloroethane, and vinyl chloride
 - **MW-633D** - 1,1-dichloroethane

Statistical Evaluation:

- The results of the assessment monitoring statistical evaluations indicated the concentrations of the following parameters at the following wells, statistically exceeded the established groundwater protection standards (**TABLE 3**).

MONITORING POINT	AMC
CAO-1	1,1-dichloroethane, arsenic, cobalt, vinyl chloride
MW-1	1,1-dichloroethane, arsenic, cobalt
MW-1R	1,1-dichloroethane, arsenic, cobalt, vinyl chloride

- The results of the First Quarter 2017 Sampling Event indicate that AMC concentrations statistically exceed the GWPS at sample points CAO-1, MW-1, and MW-1R
- In accordance with Regulation 12.1205(d)(4), an Assessment of Corrective Measures Report (June 2015, Document 67822) was submitted to ADEQ for approval.
- The next quarterly sampling event is scheduled for June 2017.

APPENDIX C

LABORATORY ANALYTICAL RESULTS

SCS Engineers - Little Rock, AR

Sample Delivery Group: L899515

Samples Received: 03/31/2017

Project Number:

Description: Nabors Landfill

Report To:

Stacie Whitmer

11219 Richardson Drive

North Little Rock, AR 72113

Entire Report Reviewed By:

Mark W. Beasley

Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Abbreviations and Definitions

SDG	Sample Delivery Group.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
U	Not detected at the Reporting Limit (or MDL where applicable).
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE**.

* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Rosner's Outlier Test

CAO-1

$n = 35$
 Statistical outliers are drawn as solid.
 $k = 5$
 $r = 3.147$
 Tabulated value = 3.08
 Alpha = 0.01
 Normality test used:
 Shapiro Wilk@alpha = 0.1
 Calculated = 0.9694
 Critical = 0.94
 The distribution, after removal of suspect values, was found to be normally distributed.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
 NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Tukey's Outlier Screening

CAO-2

$n = 35$
 Outliers are drawn as solid.
 Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.
 Data were natural log transformed to achieve best W statistic (graph shown in original units).
 High cutoff = 0.1992,
 low cutoff = 0.02806,
 based on IQR multiplier of 3.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
 NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Dixon's Outlier Test

MW-1R

$n = 11$
 Statistical outliers are drawn as solid.
 Testing for 1 high and 1 low outliers.
 Mean = 0.1855,
 Std. Dev. = 0.0565,
 0.35: $c = 0.9189$
 $\text{tab1} = 0.576$
 0.13: $c = 0.6$
 $\text{tab1} = 0.576$
 Alpha = 0.05.
 Normality test used:
 Shapiro Wilk@alpha = 0.1
 Calculated = 0.8987
 Critical = 0.859
 The distribution, after removal of suspect values, was found to be normally distributed.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
 NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Tukey's Outlier Screening

MW-2

$n = 49$
 Outliers are drawn as solid.
 Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.
 Data were cube root transformed to achieve best W statistic (graph shown in original units).
 High cutoff = 0.06378,
 low cutoff = 0.01057,
 based on IQR multiplier of 3.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
 NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Tukey's Outlier Screening

n = 49

Outliers are drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were cube root transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.1269,
low cutoff = 0.01357,
based on IQR multiplier of 3.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM

Tukey's Outlier Screening

MW-689D

n = 30

Outliers are drawn as solid.

Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.0585, low cutoff = 0.01536, based on IQR multiplier of 3.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Dixon's Outlier Test

NE-2

n = 11

Statistical outliers are drawn as solid.

Testing for 3 high outliers.

Mean = 0.02261.

Std. Dev = 0.007531.

0.0246; c = 0.7705

tab1 = 0.576.

Alpha = 0.05.

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9389
Critical = 0.851

The distribution, after removal of suspect values, was found to be normally distributed.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Dixon's Outlier Test

NE-3

n = 11

Statistical outlier is drawn as solid.

Testing for 1 low outlier.

Mean = 0.1366.

Std. Dev = 0.05078.

<0.00036; c = 0.7108

tab1 = 0.576.

Alpha = 0.05.

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9272
Critical = 0.869

The distribution, after removal of suspect values, was found to be normally distributed.

Constituent: Barium Analysis Run 5/16/2017 11:02 AM
NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Tukey's Outlier Screening

n = 35

Outlier is drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were cube root transformed to achieve best W statistic (graph shown in original units).

High cutoff = 70.78, low cutoff = 2.234, based on IQR multiplier of 3.

Constituent: Chloride Analysis Run 5/16/2017 11:02 AM

NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Dixon's Outlier Test

n = 11

Statistical outliers are drawn as solid.
Testing for 2 low outliers.
Mean = 98.18.
Std. Dev. = 28.57.
51: c = 0.7727
tab1 = 0.576.
Alpha = 0.05.

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9334
Critical = 0.859
The distribution, after removal of suspect values, was found to be normally distributed.

Rosner's Outlier Test

n = 30

Statistical outliers are drawn as solid.

k = 3
r = 4.101
Tabulated value = 3.41
Alpha = 0.01

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9387
Critical = 0.935
The distribution, after removal of suspect values, was found to be normally distributed.

Constituent: Chloride Analysis Run 5/16/2017 11:02 AM

NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Rosner's Outlier Test

n = 30

Statistical outlier is drawn as solid.

k = 1
r = 2.935
Tabulated value = 2.92
Alpha = 0.01

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9515
Critical = 0.937 (after natural log transformation)
The distribution, after removal of suspect value, was found to be log-normal.

Constituent: Chloride Analysis Run 5/16/2017 11:02 AM

NABORS Client: SCS Engineers Data: NABORS_DATABASE_SanitasMatrix

Rosner's Outlier Test

NAB-3

$n = 32$
Statistical outlier is drawn as solid.
 $k = 1$
 $r = 4.247$
Tabulated value = 2.932
 $\alpha = 0.01$
Normality test used: Shapiro Wilk($\alpha = 0.1$)
Calculated = 0.9795
Critical = 0.94 (after natural log transformation)
The distribution, after removal of suspect value, was found to be log-normal.

Rosner's Outlier Test

NAB-7

$n = 32$
Statistical outlier is drawn as solid.
 $k = 1$
 $r = 3.836$
Tabulated value = 2.932
 $\alpha = 0.01$
Normality test used: Shapiro Wilk($\alpha = 0.1$)
Calculated = 0.9452
Critical = 0.94
The distribution, after removal of suspect value, was found to be normally distributed.

Tukey's Outlier Screening

CAO-2

$n = 35$
Outliers are drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.
Data were natural log transformed to achieve best W statistic (graph shown in original units).
High cutoff = 0.02941, low cutoff = 0.000471, based on IQR multiplier of 3.

Dixon's Outlier Test

MW-1R

$n = 11$
Statistical outlier is drawn as solid.
Testing for 1 high outlier.
Mean = 0.06047.
Std. Dev. = 0.02913.
0.16: $c = 0.7676$
 $\text{tab1} = 0.576$.
 $\alpha = 0.05$.
Normality test used: Shapiro Wilk($\alpha = 0.1$)
Calculated = 0.955
Critical = 0.869
The distribution, after removal of suspect value, was found to be normally distributed.

Dixon's Outlier Test

MW-1R

n = 11
Statistical outlier is drawn as solid.
Testing for 1 high and 1 low outliers.
Mean = 19.33
Std. Dev. = 15.65
62: c = 0.7492
tab1 = 0.576

Subject: First Quarter 2017 Explosive Gas Monitoring
NABORS - Class I Landfill
AFIN: 03-0051 Permit No. 0249-S1-R2, 0249-S4

Dear Mr. Sadler:

Stearns, Conrad, and Schmidt, Consulting Engineers, Inc. (dba SCS Engineers) is pleased to present you with the results of the First Quarter 2017 Explosive Gas Monitoring at the NABORS – Class I Landfill (Landfill). The First Quarter Explosive Gas Monitoring Event was conducted on March 21, 2017 and consisted of monitoring the site perimeter Explosive Gas Monitoring probes GP-1 through GP-18, GP-14R, GP-16R and GP-18R. In addition to these perimeter probes, the landfill office and scale house were monitored for Explosive Gas.

Probe readings indicated methane was above 100% LEL at two (3) interior gas probes (GP-5, GP-14, and GP-16) which are not point of compliance probes but were monitored for informational purposes.

The next required Quarterly Explosive Gas monitoring event for the Landfill is scheduled for June 2017. Please contact us if we can be of further service or if you have any questions concerning this report.

Sincerely,

Kiefer Vaughn
Project Geologist
SCS ENGINEERS

Dan McCullough, PG
Project Director
SCS ENGINEERS
