UTV	Utility Terrain Vehicle
µS/cm	Micro Siemens per centimeter
µg/L	Micrograms per liter
VOC	Volatile organic compound

1.0 Introduction

This report summarizes the October 2020 groundwater assessment monitoring event at the North Arkansas Board of Regional Sanitation (NABORS) Landfill (the "facility" or the "site") near Three Brothers, Baxter County, Arkansas. Field work was conducted by Harbor Environmental and Safety (Harbor) on October 5-7, 2020. All groundwater sampling activities were directed by an Arkansas-registered Professional Geologist (PG). This report was prepared for the Arkansas Department of Energy and Environment, Division of Environmental Quality (DEQ), formerly known as the Arkansas Department of Environmental Quality (ADEQ).

The NABORS Landfill is located approximately 0.7-mile northeast of the community of Three Brothers, Arkansas, which is approximately nine miles north/northwest of Mountain Home in Baxter County, Arkansas. The facility location is further described as being in portions of Sections 25, 26, 35, and 36, Township 21 North, Range 14 West, at latitude 36.46339 N and longitude 92.44402 W. A site location map is included as Figure 1.

The facility consists of approximately 56 acres west of Arkansas State Highway 5. Areas surrounding the facility are rural and sparsely populated. Land use is largely agricultural and consists of cleared pasture for cattle farming or is wooded and undeveloped. Review of the United States Geological Survey (USGS) 7.5-minute topographic map of the area (Midway, AR quadrangle) shows moderate topographic relief across the area with elevations ranging from approximately 900 feet above mean sea level (amsl) to over 1,100 feet amsl at the site. The facility is situated on top of a drainage divide. The site drainage is to the east, south, and west to several named and unnamed tributaries of Pigeon Creek, which flows southeast into Norfork Lake, an impoundment of the North Fork of the White River.

1.1 Geologic Setting

The site is located in the Ozark Plateaus physiographic province, which consists of Pennsylvanian to Ordovician-aged, mostly marine deposited sedimentary rocks. The Ozark Plateaus province is comprised of three plateaus, from youngest to oldest, the Boston Mountains in the south, the Springfield Plateau to the west, and the Salem Plateau to the east. The site is located in the Salem Plateau, where the surface geology consists primarily of dolostone, with some limestone and sandstone.

Review of the Geologic Worksheet of the Midway quadrangle (Glick, 1974) shows that the site and surrounding areas are underlain by the early Ordovician-aged Cotter Dolomite. According to the Stratigraphic Summary of Arkansas (McFarland 1998), the "Cotter Dolomite is composed of dolostone of predominantly two types: a fine-grained, argillaceous, earthy textured, relatively soft, white to buff or gray dolostone called "cotton rock," and a more massive, medium-grained, gray dolostone that weathers to a somewhat hackly surface texture and becomes dark on exposure. The formation contains chert, some minor beds of greenish shale, and occasional thin interbedded

sandstone. The chert nodules associated with the Cotter frequently have concentric light and dark bands."

Several DEQ documents available via download from their website (www.adeq.state.ar.us) were reviewed to evaluate existing geology at the site. Primary amongst these documents was the original Geotechnical and Hydrogeological Study prepared by Grubs, Garner & Hoskin, Inc. (GGH) in 1987. Their report described three typical stratums below the site. Stratum I consisted of tan and brown sandy silt with chert fragments to depths of 1.5 to 3.5 feet below ground surface (bgs). Stratum II consisted of reddish tan to tan silty clay with chert to depths up to 55 feet bgs. Stratum III consisted of medium hard to hard gray and tan dolomite with chert interbedded with greenish gray and dark gray shale layers.

Usable sources of groundwater in this region occur within the Ozark Plateaus aquifer system, which consists of three distinct water-bearing zones separated by two distinct confining units *(Groundwater Atlas of the United States, Segment 5 – Arkansas, Louisiana, Mississippi, 1998)*. The uppermost aquifer in this system, the Springfield Plateau aquifer, is absent at the site and surrounding areas. The primary aquifer in use below the site and surrounding areas is the Ozark aquifer, which consists of the Ordovician-aged stratigraphic units that underlie the site (Cotter Dolomite). Although the Cotter Dolomite is used for low-yield domestic wells in the vicinity of the site, the primary water-bearing zones below the site include the Rubidoux Formation and the Gunter Sandstone Member of the Van Buren Formation. The uppermost occurrence of groundwater below the site occurs in the pore spaces of overburden soils and weathered rock at the soil-rock interface, and in fractures, bedding planes, and solution cavities in the underlying bedrock.

1.2 Site Background

Solid Waste Permit No. 0249-S was originally issued to RLH, Inc. by the Arkansas Department of Pollution Control & Ecology (predecessor to ADEQ) in 1988 to begin operations as a Class I landfill. In 2005, NABORS took over operations at the landfill and the permit was transferred accordingly. NABORS operated the landfill under this permit until a new permit was issued in 2006 (No. 0249-S1-R2). NABORS continued operating the landfill until November 2012 when it ceased accepting waste. NABORS began conducting post-closure activities in late 2012; however, due to financial constraints, they could not fulfill their obligations. At this time, closure activities were taken over by DEQ. In addition, DEQ also took over leachate management at the facility. Currently, leachate is stored in aboveground storage tanks at the facility. Leachate is periodically transported to the City of Springfield, Missouri for disposal under Wastewater Contribution Permit No. 593, which was issued in September 2016. The landfill has been capped with ClosureTurf® over a 12-inch intermediate soil cover. The ClosureTurf® consists of a 40-mil linear low-density polyethylene (LLDPE) microspike geomembrane overlain by an engineered synthetic turf and 0.5-inch sand layer.

1.3 Previous Investigations

As required by the permit, ongoing groundwater monitoring is being conducted at the facility. A series of monitoring points have been established and expanded over time as a result of detections of volatile organic compounds (VOCs) and metals in several of the wells. Currently, the monitoring network consists of a network of two-inch monitoring wells and natural springs within and around the facility.

1.4 Groundwater Monitoring Network

The NABORS landfill currently has 24 two-inch polyvinyl chloride (PVC) monitoring wells and 13 documented springs and seeps, referred to as monitoring points. Due to the recent closure activities, access to some of the wells, springs and seeps have been affected. Table 1-1 below summarizes the monitoring points and their current condition. Figure 2 attached to this report shows the monitoring point locations.

Table 1-1 – Summary of Monitoring Points

Monitoring Wells	Status	Sampled (Y/N)
MW-1	Well intact and accessible by vehicle.	Y
MW-1R	Well intact and accessible by vehicle.	Y
MW-2	Well intact and accessible by foot behind new chain link fence.	Y
MW-3	Well has been extended and is accessible by utility terrain vehicle (UTV). Behind new chain link fence.	Y
MW-4	Well intact and accessible by UTV. Behind new chain link fence.	Y
MW-5	Well intact but direct access blocked due to erosion. Equipment was carried on foot. Behind new chain link fence.	Y
MW-6	Well intact and accessible by UTV. Access road needs clearing.	Y
MW-7	Well intact and accessible by UTV. Access road needs clearing.	Y
CAO-1	Well intact and accessible by vehicle.	Y
CAO-2	Well has been extended and is accessible by UTV. Behind new chain link fence.	Y
CAO-3	Well intact and accessible by UTV.	Y
NAB-2	Well has been extended and is accessible by UTV.	Y
NAB-3	Well intact and accessible by UTV. Access road needs clearing.	Y
NAB-4	Well has been extended but is on steep slope with dense vegetation. Partially accessible by UTV. Behind new chain link fence.	Y
NAB-7	Well intact and accessible by UTV. Access road needs clearing.	Y
NAB-8	Well has been extended and is accessible by vehicle. Purged and sampled with bailer – insufficient volume of water to collect sample.	N
MW-509D	Well on top of topographic mound, but mostly accessible by UTV. Grading would help access.	Y
MW-577	Well on top of topographic mound, but mostly accessible by UTV. Grading would help access.	Y

Table 1-1 – Summary of Monitoring Points (continued)

Monitoring Wells	Status	Sampled (Y/N)
MW-633D	Well intact and accessible by vehicle.	Y
MW-689D	Well intact and accessible by UTV. Access road needs clearing.	Y
NE-2	Well intact and accessible by foot. Purged and sampled with bailer.	Y
NE-3	Well intact and accessible by UTV. Access road needs clearing.	Y
NE-4	Well intact and accessible by foot only. Need better access.	Y
NE-6	Well intact and mostly accessible by UTV.	Y
Springs/Seeps	**Status**	**Sampled (Y/N)**
Entrance seep	Flowing. Very difficult access due to steep, uneven slopes.	Y
Spring A	No flow observed.	N
Spring B	No flow observed.	N
TSP-1	No flow observed.	N
TSP-2	No flow observed.	N
TSP-3	No flow observed.	N
TSP-4	No flow observed.	N
Class I Draw	No flow observed.	N
Class IV Draw	No flow observed.	N
SP-4	No flow observed.	N
SP-5	No flow observed.	N
SP-7	Daylighting in stream channel.	Y
Spring near NE-3	No flow observed.	N

1.5 Leachate Sampling

Semi-annual monitoring of the landfill leachate is required under the City of Springfield wastewater contribution permit. A leachate sample (plus duplicate) was collected and included as part of the assessment monitoring. A summary of the leachate analysis is included in Section 4.0 below.

1.6 Investigative-Derived Wastes

Investigative-derived wastes (IDW) generated during the groundwater sampling event included purged groundwater, decontamination water, and expendables (e.g., nitrile gloves, plastic sheeting, plastic tubing, bailers, etc.). Purge and decontamination water were disposed of onsite into the leachate collection system. Expendables were placed in garbage bags for disposal offsite.

1.7 Assessment Monitoring Constituents

The Assessment Monitoring Constituents (AMCs) were established based on the Arkansas Pollution Control and Ecology Commission Regulation 22 assessment monitoring requirements. The designated AMCs for groundwater are summarized in Table 1-2 below. In addition, field-

monitoring parameters are also listed in Table 1-2. Specific laboratory analytical methods for the AMCs are listed in Tables 3-3 and 3-4 in Section 3.0 below.

Table 1-2 – Field Parameters and Assessment Monitoring Constituents

Field Parameters		
Dissolved Oxygen (DO)	pH	Temperature
Oxidation-Reduction Potential (ORP)	Specific Conductance	Turbidity
Indicator Parameters		
Chloride	Sulfate	Total Dissolved Solids (TDS)
Cyanide	Sulfide	Total Organic Carbon (TOC)
Volatile Organic Compounds		
Acetone	1,4-Dichlorobenzene	Styrene
Acrylonitrile	trans-1,4-Dichloro-2-butene	1,1,1,2-Tetrachloroethane
Benzene	1,1-Dichloroethane	1,1,2,2-Tetrachloroethane
Bromochloromethane	1,2-Dichloroethane	Tetrachloroethene
Bromodichloromethane	cis-1,2-Dichloroethene	Toluene
Bromomethane	trans-1,2-Dichloroethene	1,1,1-Trichloroethane
Carbon disulfide	1,2-Dichloropropane	1,1,2-Trichloroethane
Carbon tetrachloride	cis-1,3-Dichloropropene	Trichloroethene
Chlorobenzene	trans-1,3-Dichloropropene	Trichlorofluoromethane
Dibromochloromethane	Ethylbenzene	1,2,3-Trichloropropane
Chloroethane	2-Hexanone	Vinyl acetate
Chloroform	Iodomethane	Vinyl chloride
Chloromethane	Methyl ethyl ketone	Xylenes
Dibromomethane	Methylene chloride	
1,2-Dichlorobenzene	4-Methyl-2-pentanone	
Inorganics		
Antimony	Copper	Selenium
Arsenic	Iron	Silver
Barium	Lead	Thallium
Beryllium	Manganese	Tin
Cadmium	Mercury	Vanadium
Chromium	Nickel	Zinc
Cobalt		

2.0 Field Activities and Sampling Methodology

Sample identification, labeling, preservation, quality assurance/quality control (QA/QC) methods, and laboratory analytical methods were conducted in accordance with the following sections. All field work was conducted in accordance with the site-specific Health and Safety Plan (HASP), included in Appendix A of the previously submitted Sampling and Analysis Plan (SAP).

2.1 Well/Spring Assessment and Water Level Measurement

Prior to sample collection, each well or spring was visually evaluated for physical condition including condition of riser and well pad, presence of locking device, and presence of any biohazards such as wasps, snakes, etc. Photographs were taken to document the condition of wells as needed. After each well riser was opened and the internal well cap removed, an electronic water level indicator was used to measure static groundwater level and total depth of each well. The static water level was allowed to equilibrate to atmospheric pressure prior to recording the final depth. Groundwater levels (measured to the nearest 0.01-foot) and total depths (TDs, measured to the nearest 0.1-foot) were measured from the surveyed reference mark on the top of the well casing (if available), or from the highest point of the well casing if no survey reference mark was present. Groundwater depths and total depths were recorded on a Groundwater Sampling Record (see Appendix A – Field Forms) prepared for each well or spring.

2.2 Monitoring Well Purging and Sampling

Most of the wells were purged utilizing the low-flow sampling technique. Wells were purged utilizing either a centrifugal submersible pump or an aboveground peristaltic pump. A peristaltic pump was used for shallower wells (generally 25 feet or less) in which only the low-density polyethylene (LDPE) tubing was lowered into the well. On deeper wells, a stainless-steel or polyethylene submersible pump with dedicated LDPE tubing was gently lowered into each well to a point within the screened interval of the well. Regardless of pump type, the discharge tubing was connected to a flow-through cell to enable measurement of field parameters by a multi-parameter instrument. Field parameters measured included DO, ORP, pH, specific conductance, temperature, and turbidity. All field meters were calibrated daily per the manufacturer's recommendations prior to sampling (see Appendix A – Field Forms).

The United States Environmental Protection Agency's (EPA's) *Low-Flow (Minimal Drawdown) Groundwater Sampling Procedures* (April 1996) was generally utilized to purge and sample the wells. Once the field parameters had stabilized, turbidity was less than 10 nephelometric turbidity units (NTU), and minimal drawdown had occurred, the wells were sampled. Groundwater is considered stabilized if the field parameters are within ten percent for three consecutive readings. All data collected was recorded on Groundwater Sampling Records.

Upon stabilization, the discharge tube was disconnected from the flow-through cell and groundwater samples were collected from each well and placed in laboratory-supplied pre-preserved containers. Samples were collected in order of volatility – VOCs, TOC, then indicator

parameters, then inorganics. The samples were properly labeled and preserved on ice. Final field measurements and other sampling information (date and time, sample ID#s) were recorded on the Groundwater Sampling Record. Wells that could not be purged and sampled with the low-flow technique (NAB-8 and NE-2) were bailed dry and allowed to recharge overnight. NE-2 was sampled the following morning with the bailer. NAB-8 did not recover enough and could not be sampled.

2.3 Spring Sampling

Prior to collecting groundwater samples from the springs, a multi-parameter instrument was utilized to measure the field parameters at each spring. Data was recorded on a Spring Sampling Record located in Appendix A. Springs were sampled by dipping the sample container directly into the spring flow where practical. Most of the springs were observed with little or no flow and could not be sampled. Samples were collected from spring SP-7 and the Landfill Entrance Seep.

2.4 Leachate Sampling

As previously noted, a leachate sample and a duplicate leachate sample were collected from the leachate tank battery. The samples were collected directly from the tank discharge valve located on the southeast side of the tank farm. The leachate samples were appropriately labeled and preserved on ice for later transport to the analytical laboratory under chain-of-custody. The leachate samples were analyzed for the constituents required under the City of Springfield wastewater contribution permit. Additional information regarding analytes and analytical procedures for the leachate samples are provided in Section 4.0 below.

2.5 Equipment Decontamination

All non-dedicated groundwater sampling equipment, such as the submersible pump and the water level indicator, was properly decontaminated before first use and between wells using the following procedure:

- Wash equipment using tap water and phosphate-free soap (e.g., Liquinox);
- Turn pump on to allow soap solution to clean internal portion of pump;
- Thoroughly rinse equipment with potable water (including running pump);
- Double-rinse equipment with organic-free deionized water (including running pump); and
- Allow equipment to air dry and wrap in aluminum foil (if not used immediately).

The decontamination area contained a gross wash bucket with brush, tap water sprayer, deionized water sprayer, and equipment drying area. Plastic sheeting was used to contain any spills from the decontamination process. New polyethylene tubing was used for each well and did not require decontamination.

2.6 Sample Documentation and Shipment

Field notes were kept by each employee in a bound logbook using indelible ink. Information recorded included date, weather, site personnel, sampling procedures, site conditions, sample locations and identification (ID) codes, sampling dates and times, record of onsite arrival and departure, explanation of photographs, visual observations, sample handling or management procedures, deviations from the SAP, and any other pertinent site or project information. Harbor documented any abnormal conditions observed, such as damaged wells or other infrastructure, by photograph. Notes pertaining to any photographs taken were written in the field logbook. Groundwater sample collection forms were completed for each well or spring sampled. Completed field forms are included in Appendix A.

All samples were labeled according to the existing monitoring point network as listed in Table 1-1 of Section 1.4. The designated laboratory, Arkansas Analytical, Inc. of Little Rock, provided appropriate sample containers with pre-printed labels. In general, each label contained the following information: date, time, sample ID number, preservatives, and requested analysis.

A chain-of-custody form was completed for the samples collected and submitted to the designated laboratory for analysis. The chain-of-custody provides chronological documentation, or a paper trail, showing the collection, custody, control, transfer, analysis, and disposition of the samples. Information on the chain-of-custody includes general project information, personnel contact information, sample code identification, date and time of sampling, sample type, containers, preservatives, requested analyses, sampler signature, and shipping/delivery information. The chain-of-custody was transferred from Harbor to Arkansas Analytical upon hand-delivery of the sample ice chest(s) to the laboratory. Copies of the chains-of-custody are included in Appendix B – Analytical Results.

Tamper-evident custody seals were secured on the sample ice chests when the ice chests were not in Harbor's custody. When this occurred, the ice chests were locked in a vehicle, hotel room, or other secure structure. The custody seals were signed, dated, and placed on the lid of the ice chests to assure that the ice chests are not tampered with. The samples were hand delivered on October 7, 2020 at 1505 and October 8, 2020 at 1012 to Arkansas Analytical to ensure that hold times were met.

2.7 Field QC Sample Objectives and Collection Frequency

Primary measurements for field (and laboratory) QA/QC were derived from blind duplicate samples, matrix spike/matrix spike duplicate (MS/MSD) samples, rinsate (equipment) blanks, field blanks, and trip blanks collected in the field. QC samples utilized in the field during the groundwater monitoring event include field duplicates, rinsate blanks, and trip blanks. MS/MSD samples were prepared by the lab.

A field duplicate is an identical sample collected from the same location, at the same time, under identical conditions as the investigative sample. Field duplicate samples are analyzed along with

the original to ascertain procedural precision and inherent source variability. Two field duplicate samples were collected (5 percent) and analyzed for the same parameters as the associated investigation samples.

Rinsate (or equipment) blanks were collected by pouring distilled water over decontaminated sampling equipment (e.g., pump, water level indicator) and into a sample container. These blanks assess cross-contamination from improper decontamination. Equipment rinsate samples were collected at a rate of one per day.

Trip blanks prepared by the analytical laboratory were shipped with each cooler. Trip blanks were kept unopened in the sample coolers until the collected samples and coolers were returned to the lab for analysis. The trip blanks were then opened in the laboratory and analyzed for VOCs along with the investigative field samples. One trip blank per cooler was analyzed.

MS/MSD analyses are conducted by the laboratory to assess the heterogeneity of contaminant concentrations in the groundwater samples. MS/MSD samples were analyzed at a rate of 1 in 20 samples (5 percent) per matrix for the same parameters as the associated investigation samples.

2.8 Sample Identification, Collection, Processing and Documentation

Samples were collected and labeled according to the existing well and spring identification numbers. The following is a list of general sampling procedures and practices implemented during the groundwater sampling event to ensure consistency during sample collection.

- Pre-cleaned sample containers were provided by the designated laboratory.
- Sampler(s) donned clean pairs of protective Nitrile gloves between sampling locations and intervals.
- Samples for laboratory analysis were collected using either a peristaltic pump with dedicated polyethylene tubing, a decontaminated submersible pump (polyethylene or stainless-steel) with new disposable polyethylene tubing, or a disposable polyethylene bailer.
- All non-disposable sampling equipment was decontaminated in accordance with the procedures outlined in Section 2.5 above.
- Sample containers were labeled immediately prior to sample collection, and collected samples were preserved on ice in an ice chest.

2.9 Equipment Calibration

Field meters (pH, temperature, specific conductance, DO, ORP, and turbidity) were calibrated daily prior to use per the manufacturer's specifications. Calibration data was recorded on a calibration log and also in the field logbook. Field calibration logs are included in Appendix A.

3.0 Groundwater Analytical Results

The groundwater samples were delivered to Arkansas Analytical under proper chain-of-custody for analysis of the project AMCs. Depth to groundwater and total depth of each well were all measured on the first day of field work. This information is listed in Table 3-1 below. Groundwater elevations were utilized to prepare a potentiometric surface map which is included as Figure 2 of this report. Field parameters (DO, specific conductance, ORP, pH, temperature and turbidity) were monitored during groundwater purging of wells to ensure that the well water was stabilized prior to sampling. The final field readings for each well prior to sampling are also listed in Table 3-1 below. Additionally, field parameters were measured at each spring location prior to sampling. Groundwater Sampling Records, completed for each sampling point, are included in Appendix A of this report.

3.1 Conceptual Groundwater Flow

The 24 monitoring wells in use for groundwater monitoring activities at the landfill were utilized to construct the potentiometric surface map. Figure 2 attached to this report shows the potentiometric groundwater surface below the site. The highest groundwater elevation during this event was measured in monitoring well CAO-1, located south of Area 1-2. The lowest groundwater elevation occurred in monitoring well NE-3, located southeast of Area 1-3. The landfill is situated on a topographic high spot. Several monitoring wells (MW-1, CAO-1, MW-1R, MW-6, MW-577, and NAB-7) define the highest groundwater elevations at the site. Groundwater generally flows radially outward and downward from these points.

Review of the 1987 Geotechnical and Hydrogeological Study prepared by GGH indicated an average hydraulic conductivity of 1.0×10^{-3} centimeters per second (cm/sec) for the unconfined aquifer below the site. Porosity in dolomite bedrock ranges from 0–20 percent but could be higher in soils and weathered rock above the bedrock. For consistency in calculating groundwater flow velocity at the site, Harbor utilized a porosity of ten percent and an effective porosity of nine percent (as utilized in previous groundwater sampling events).

The hydraulic gradient in the Area 1-2 portion of the landfill was calculated by comparing the upgradient well, MW-1R, to the downgradient well, MW-5. The change in head of 71.35 feet between the two wells over a distance of approximately 1,432 feet produces a hydraulic gradient of 0.050 foot per foot (ft/ft).

The hydraulic gradient in the Area 1-3 portion of the landfill was calculated by comparing the upgradient well, MW-1R, to a downgradient well, NAB-3. The change in head of 101.89 feet between the two wells over a distance of approximately 1,811 feet produces a hydraulic gradient of 0.056 ft/ft.

The hydraulic gradient was then used to calculate the average linear groundwater velocity (for unconfined conditions) for Areas 1-2 and 1-3 utilizing the following equation:

$$V_x = Ki/n_e$$

where, V_x is the average linear velocity (cm/sec), K is the hydraulic conductivity (cm/sec), i is the hydraulic gradient (ft/ft), and n_e is the effective porosity (%). From this, the following groundwater velocities were obtained for Areas 1-2 and 1-3.

Area 1-2:

$$V_x = [(1.0 \times 10^{-3} \text{ cm/sec})(0.050 \text{ ft/ft})]/(0.09) = 5.54 \times 10^{-4} \text{ cm/sec or } 1.6 \text{ ft/day}$$

Area 1-3:

$$V_x = [(1.0 \times 10^{-3} \text{ cm/sec})(0.056 \text{ ft/ft})]/(0.09) = 6.25 \times 10^{-4} \text{ cm/sec or } 1.8 \text{ ft/day}$$

Table 3-1 – Summary of Field Parameters

Well/ Spring ID	Sample Date	Sample Time	TOC Elevation (feet amsl)	GW Depth (feet below TOC)	GW Elevation (feet amsl)	TD (feet below TOC)	Dissolved Oxygen (mg/L)	Specific Conductance (µS/cm)	Oxidation-Reduction Potential (mV)	pH (standard units)	Temperature (°C)	Turbidity (NTU)

Notes: All groundwater depths in the monitoring wells were measured on 4/20/20. NS – not sampled; TOC – top of casing; amsl – above mean sea level; GW – groundwater; TD – total depth; mg/L – milligrams per liter; µS/cm – micro Siemens per centimeter; mV – millivolts; °C – degrees Celsius; NTU – nephelometric turbidity units; LE – Landfill Entrance; dash indicates data not available or sample not collected.

3.2 Groundwater Analytical Results

The results of the laboratory analysis of the groundwater samples are summarized in Tables 3-2 and 3-3 below. The results were compared to the US EPA National Primary Drinking Water Regulations (NPDWR) – Maximum Contaminant Levels (MCLs) and the National Secondary Drinking Water Regulations (NSDWR) secondary maximum contaminant levels (SMCLs). MCLs are legally enforceable primary standards that protect public health by limiting the levels of contaminants in drinking water. The NSDWR SMCLs are non-mandatory (non-enforceable) contaminant levels that have been established for 15 contaminants. The SMCLs are established as guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor. Some AMCs were compared to regional screening levels (RSLs) which have been established by EPA in lieu of or in addition to MCLs. The RSL used for comparison purposes was the residential tapwater screening level. Significant constituent detections that exceeded the MCLs or RSLs are discussed in the following paragraphs. The results of inorganic laboratory analyses are summarized in Table 3-2 below. The letter "J" indicates the value was estimated by lab. Exceedances are listed below:

- Sulfate was detected in the sample from NE-2 at a concentration of 264 mg/L, which exceeded the SMCL of 250 mg/L for sulfate.
- TDS was measured in the samples from CAO-1, CAO-2, MW-1, MW-1R, MW-3, and NE-2 at concentrations ranging from 512 to 877 mg/L. The detected concentrations exceeded the SMCL of 500 mg/L for TDS.
- Arsenic was detected in the samples from CAO-1, MW-1, MW-1R, NAB-2, and NAB-7 at concentrations ranging from 12.2 to 128 micrograms per liter (µg/L). The detected concentrations exceeded the MCL of 10 µg/L for arsenic.
- Cobalt was detected in the samples from CAO-1, MW-1, MW-1R, MW-3, and the Landfill Entrance Seep at concentrations ranging from 9.32 to 59.6 µg/L. The detected concentrations exceeded the RSL of 6 µg/L for cobalt.
- Iron was detected in the samples from MW-1, MW-2, MW-3, MW-689D, NAB-7, NE-4, SP-7, and the Landfill Entrance Seep at concentrations ranging from 344 to 8,960 µg/L. These concentrations exceed the SMCL of 300 µg/L for iron. Iron was detected in the samples from CAO-1 and MW-1R at concentrations of 25,400 and 34,900 µg/L, respectively, which exceed the RSL of 14,000 µg/L for iron.
- Lead was detected in the samples from CAO-2 and NAB-7 at concentrations of 19.5 and 63.5 µg/L, respectively, which exceed the MCL of 15 µg/L for lead.
- Manganese was detected in the samples from CAO-1, CAO-2, MW-1R, MW-633D, NAB-2, NAB-3, and NE-3 at concentrations ranging from 51.4 to 419 µg/L. The detected concentrations exceeded the SMCL of 50 µg/L for manganese. Manganese was detected in the samples from MW-1, MW-3, NAB-4, SP-7 and the Landfill Entrance Seep at concentrations ranging from 630 to 2,800 µg/L, which exceed the RSL of 430 µg/L for manganese.

- Mercury was detected in the sample from NAB-4 at a concentration of 1.22 µg/L, which exceeds the RSL of 0.63 µg/L for mercury. Mercury was detected in the sample from MW-633D at a concentration of 2.00 µg/L, which equals the MCL of 2 µg/L RSL for mercury.
- Thallium was detected in the samples from CAO-2, CAO-3, MW-1R, MW-633D, and NAB-4 at concentrations ranging from of 0.205 J to and 1.62 µg/L, respectively, which exceed the RSL of 0.2 µg/L for thallium.

The results of the organic laboratory analyses are summarized in Table 3-3 below. Exceedances are listed below:

- TOC was detected in ten of the wells and the two sampled springs at concentrations ranging from 1.11 to 10.3 mg/L. No screening levels have been established for TOC.
- Benzene was detected in the samples from CAO-1, MW-1, and MW-1R at concentrations ranging from of 1.22 and 4.94 µg/L, respectively, which exceed the RSL of 0.46 µg/L for benzene.
- 1,4-Dichlorobenzene was detected in the samples from CAO-1, MW-1, and MW-1R at concentrations ranging from 2.76 to 4.97 µg/L, which exceed the RSL of 0.48 µg/L for 1,4-dichlorobenzene.
- 1,1-Dichloroethane was detected in the samples from CAO-1, MW-1, and MW-1R at concentrations ranging from 3.33 to 16.8 µg/L, which exceed the RSL of 2.8 µg/L for 1,1-dichloroethane.
- 1,2-Dichloroethane was detected in the samples from MW-1 and MW-1R at concentrations of 0.632 J and 0.681 J µg/L, respectively which exceed the RSL of 0.17 µg/L for 1,2-dichloroethane. 1,2-Dichlorethane was also detected in the equipment blank sample EB-2 at a concentration of 0.307 J µg/L, which also exceeds the RSL of 0.17 µg/L for 1,2-dichloroethane.
- Methyl-tert-butyl ether (MTBE) was detected in the samples from CAO-1, MW-1, and MW-1R at concentrations ranging from 29.7 to 49.6 µg/L, which exceed the RSL of 14 µg/L for MTBE.
- Trichloroethene was detected in the sample from MW-1R at a concentration of 0.590 J, which exceed the RSL of 0.49 µg/L for trichloroethene.
- Vinyl chloride was detected in the samples from CAO-1 and MW-633D at concentrations of 1.14 J and 0.575 J µg/L, respectively, which exceed the RSL of 0.019 µg/L for vinyl chloride. Vinyl chloride was detected in the samples from MW-1 and MW-1R at concentrations of 9.33 and 4.51 µg/L, respectively, which exceeds the MCL of 2 µg/L for vinyl chloride.

Additional VOC constituents were detected at concentrations lower than their respective RSLs or MCLs in several of the wells. These compounds included, but are not limited to benzene, 2-butanone, chlorobenzene, chloroethane, 1,2-dichloropropane, 1,1-dichloroethane, cis-1,2-dichloroethene, trans-1,2-dichloroethene, MTBE, toluene, and o-xylene. Most of these were "J-flagged" by the analytical laboratory as estimated concentrations.

Exceeds MCL MCL = Maximum Contaminant Level (May 2020)

Exceeds RSL RSL = Regional Screening Level (EPA Regional Screening Level - Resident Tapwater – May 2020)

Exceeds SMCL SMCL = Secondary Maximum Contaminant Level

Bold Indicates constituent detected below screening levels.

Dash (—) Indicates no screening level has been established.

Notes: SO_4 - sulfate; mg/L - milligrams per liter; µg/L – micrograms per liter; Dup - duplicate; LE - landfill entrance; EB - equipment blank; J - Indicates "estimated" results that are below the quantitation limit but above the method detection limit.

Exceeds MCL MCL = Maximum Contaminant Level (May 2020)

Exceeds RSL RSL = Regional Screening Level (EPA Regional Screening Level - Resident Tapwater – May 2020)

Exceeds SMCL SMCL = Secondary Maximum Contaminant Level

Bold Indicates constituent detected below screening levels.

Dash (—) Indicates no screening level has been established.

Notes: SO_4 - sulfate; mg/L - milligrams per liter; µg/L – micrograms per liter; Dup - duplicate; LE - landfill entrance; EB - equipment blank; J - Indicates "estimated" results that are below the quantitation limit but above the method detection limit.

Exceeds MCL MCL = Maximum Contaminant Level

Exceeds RSL RSL = Regional Screening Level (EPA Regional Screening Level - Resident Tapwater - November 2019)

Bold Indicates constituent detected below screening levels.

Dash (—) Indicates no screening level has been established or constituent not analyzed.

Notes: µg/L - micrograms per liter; Dup - duplicate; LE - landfill entrance; EB - equipment blank; J - Indicates "estimated" results that are below the quantitation limit but above the method detection limit; TOC - total organic carbon.

Table 3-3 - Summary of Organic Parameter Analyses (continued)

Exceeds MCL MCL = Maximum Contaminant Level

Exceeds RSL RSL = Regional Screening Level (EPA Regional Screening Level - Resident Tapwater - November 2019)

Bold Indicates constituent detected below screening levels.

Dash (—) Indicates no screening level has been established.

Notes: µg/L - micrograms per liter; Dup - duplicate; LE - landfill entrance; EB - equipment blank; J - Indicates "estimated" results that are below the quantitation limit but above the method detection limit; TOC - total organic carbon.

3.3 Statistical Analysis

Sanitas™ version 9.6.07 software was utilized to conduct a statistical analysis of the groundwater data for the October 2020 sampling event. The methods used in the Sanitas™ program are based on statistical procedures outlined in the EPA's Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities (*Unified Guidance*, March 2009).

Time plots of individual AMCs at wells showing current and historic detections were plotted to provide a visual summary of current and historic detections at individual wells, along with possible trends in the data and variability among the wells. The time plots also evaluate the potential presence of outliers that could disproportionally affect increasing or decreasing trends. Wells showing potential AMC outliers were then further analyzed using Rosner's Outlier Test and Tukey's Outlier Screening to evaluate outliers. Outliers were observed for nickel in the groundwater samples from CAO-2, NAB-4, NE-4 and NE-6, chromium in the groundwater sample from MW-1, and barium in the groundwater sample from MW-633D. No other outliers were observed. Time plots and outlier analysis are included in Appendix C.

The Mann-Kendall test for temporal trends combined with the Sen's slope estimate was performed on current and historically detected AMCs to evaluate whether statistical trends are evident in the data. The significant trend results are shown on the Mann-Kendall/Sen's Slope plots presented in Appendix C. Increasing and decreasing statistical trends for AMCs and wells are summarized in Table 3-4 below.

Table 3-4 – Summary of Statistical Trends

Well	Significant Increasing Trends	Significant Decreasing Trends
CAO-1	Arsenic, barium, benzene, chloride, iron	Cadmium, chromium, cobalt, copper, 1,1-dichloroethane, cis-1,2-dichloroethene, manganese, nickel, sulfate, vanadium, vinyl chloride, zinc
CAO-2	Barium, chloride	Cadmium, cobalt, copper, vanadium, zinc
CAO-3	Chloride	Arsenic, barium, cadmium, chromium, cobalt, copper, nickel, sulfate, TOC, vanadium, zinc
MW-1	Arsenic, barium, benzene, chloride, 1,1-dichloroethane, 1,2-dichloroethane, cis-1,2-dichloroethene, 1,4-dichlorobenzene, cobalt, TDS, iron, manganese, MTBE, nickel, sulfate, TOC, trichloroethene, vinyl chloride, zinc	Cadmium, **chromium**, vanadium
MW-1R	Arsenic, 1,1-dichloroethane, 1,2-dichloroethane, 1,4-dichlorobenzene, iron	Cobalt, manganese, **zinc**
MW-2	—	Cadmium, chromium, cobalt, copper, manganese, vanadium, zinc
MW-3	Barium, iron, manganese, nickel, TDS, TOC, zinc	Chromium, cobalt, copper, sulfate, thallium, vanadium
MW-4	Chloride, sulfate, TDS, zinc	Arsenic, cadmium, chromium, cobalt, copper, manganese, mercury, **nickel**, vanadium
MW-5	Chloride, sulfate, TDS, zinc	Arsenic, cadmium, chromium, cobalt, copper, manganese, mercury, **nickel**, vanadium
MW-6	Chloride, sulfate, TDS, zinc	Arsenic, cadmium, chromium, cobalt, copper, manganese, **nickel**, vanadium
MW-7	—	Arsenic, barium, cadmium, chloride, chromium, cobalt, copper, vanadium, zinc
MW-509D	Chloride, sulfate	Chromium, cobalt, copper, nickel, **TOC**
MW-577	Chloride	Barium, cadmium, chromium, cobalt, copper, nickel, sulfate, TDS, **TOC**, vanadium
MW-633D	Barium, chloride, TDS, zinc	Chromium, cobalt, copper, **mercury,** nickel, sulfate, vanadium
MW-689D		Cadmium, chromium, cobalt, copper, nickel, TOC, vanadium, zinc
NAB-2	Barium, chloride, manganese, TDS	Cadmium, **chromium**, cobalt, copper, nickel, sulfate, TOC, vanadium
NAB-3	Barium, chloride, ***TDS***	**Arsenic**, cadmium, chromium, cobalt, copper, nickel, vanadium
NAB-4	Barium, sulfate, TDS, zinc	Chromium, cobalt, copper, vanadium
NAB-7	Barium, iron, zinc	Cadmium, chromium, cobalt, copper, nickel, vanadium
NAB-8	Chloride, TDS	Barium, chromium, cobalt, copper, nickel, vanadium
NE-2	—	Chloride, iron, **nickel,** sulfate, TOC, TDS
NE-3	—	**Zinc**
NE-4	—	—
NE-6	—	—

Generally, statistically increasing and decreasing trends were consistent with previous trends. Several constituents that were previously noted as increasing or decreasing were shown to be no longer significant – these constituents are shown in italicized green text. Conversely, several constituents were added, which are shown in bold red text.

As discussed in previous reports, an important consideration is whether the data is significantly influenced by seasonal changes. If so, then the data should be adjusted for seasonal influences. Based on the data generated to date, and as stated in previous reports, it is suspected that concentration levels are significantly influenced by the amount of precipitation and the timing of individual precipitation events in relation to sampling events. It is likely that the recently installed landfill cap will reduce the effect of precipitation at the site.

Confidence intervals are commonly used for assessment monitoring to demonstrate significance in AMC concentrations. The Groundwater Protection Standards (GWPS) utilized in the statistical evaluation (MCLs, RSLs and SMCLs) are included in Table 3-2 and Table 3-3 attached to this report. The statistical evaluation was conducted in accordance with recommended procedures found in the Unified Guidance (UG). Confidence intervals were constructed for any metal or VOC constituent detected in concentrations greater than the applicable screening level, also listed in Tables 3-2 and 3-3. Confidence interval statistical analysis was not performed for indicator parameters.

The calculation of confidence intervals consisted of the establishment of 95% Lower Confidence Limits (LCLs) and 95% Upper Confidence Limits (UCLs). If one or more of the events used for the confidence interval was above the constituent's MCL and the calculated coefficient of variation (CV) for the population was greater than 0.3, then additional evaluations were performed for that well/constituent pair. If, after further evaluation, a population that was compiled with the statistical procedures outlined in UG Section 22.1.1 & UG Table 22-3, then a visual inspection of the data was performed to identify shift points in the data set. From these shift points, the most recent population was used in the calculation of confidence limits.

The evaluation results show that the calculated LCLs were exceeded for the following AMC parameters at the following monitoring points, indicating with statistical confidence that the measured concentrations are above the established GWPS.

Table 3-5 – Summary of LCL Exceedances

Monitoring Point	AMC
CAO-1	1,1-dichloroethane
MW-1	1,1-dichloroethane, 1,2-dichloroethane, 1,4-dichlorobenzene, MTBE
MW-1R	1,1-dichloroethane, 1,2-dichloroethane, 1,4-dichlorobenzene, MTBE, trichloroethene

The complete confidence interval evaluation results for the October 2020 sampling event are presented in Appendix C. Historic and current data are presented in Appendix D.

4.0 Leachate Analytical Results

As previously referenced, the leachate generated at the NABORS Landfill is transported to the City of Springfield's wastewater collection system under Wastewater Contribution Permit No. 593. A sample of the leachate plus a duplicate sample were collected on October 20, 2020 at 1020 and submitted for laboratory analysis. Table 4-1 below summarizes the analytical methods and results of the analyses.

Table 4-1 – Summary of Leachate Analysis Results

Parameter	Analytical Method	Units	Leachate	Leachate Duplicate
Chloride	EPA 300.0, 2.1-1993	mg/L	**988**	**1020**

Notes: mg/L – milligrams per liter; µg/L – micrograms per liter

The VOC detection limits were substantially elevated during this sampling event. The lab indicated that the samples were yellow, viscous, and soapy and that dilution was necessary for analysis. The dilution resulted in elevated detection limits.

5.0 Quality Assurance/Quality Control Results

Duplicate samples were collected from monitoring wells MW-1R and MW-509 during the October 2020 groundwater sampling event. In addition, a duplicate sample of leachate was also collected. With a few exceptions, comparison of the original and duplicate data shows generally good agreement between sample and duplicate pairs.

The calculated relative percent differences (RPD) for the MW-1R duplicate sample pair were all below 20 percent. The calculated RPDs for the MW-509 duplicate sample pair were all below 20 percent, with one exception. The RPD for copper was 167 percent, which is an order of magnitude difference between the sample and duplicate sample. Copper was detected at a concentration of 6.85 µg/L in the original sample, while copper was detected at a concentration of 0.615 µg/L in the duplicate sample. Calculated RPDs for the leachate duplicate sample pair were all below 20 percent with four exceptions. The RPD for barium was 85.2 percent, copper was 39.4 percent, iron was 34.8 percent, and lead was 35.0 percent.

Three equipment blanks (one per day) were collected during groundwater sampling activities. The equipment blanks were collected by running deionized water over decontaminated equipment directly into the sample containers. Several inorganic constituents (TDS, barium, chromium, copper, and/or iron) were detected in some or all of the equipment blanks. The VOC constituent 2-butanone was detected in all three equipment blanks. Several other VOC constituents, including 1,2-dichloroethane, ethylbenzene, 2-hexanone, 4-methyl-2-pentanone, styrene, 1,2,4-trimethylbenzene, m,p-xylene, and/or o-xylene, were detected in equipment blank EB-2.

Five trip blanks (TB-1 through TB-5) were analyzed for VOCs to evaluate the potential for sample cross-contamination. No VOCs were detected in any of the trip blanks above their respective detection limits.

(20) 10/5/20 - NABORS LANDFILL

AM - Clear, cool.

PM - Clear, mild.

0820 - M. Lybrand arrives at NABORS site, M. Dollar onsite. Unload equipment, prepare for groundwater gauging and sampling.

0850 - Prepare to gauge wells - see field data sheet.

1125 - Gauging complete, prepare for groundwater sampling. YSI meter has been calibrated by Field Env.

1135 - Start purging MW-7. See Groundwater Sampling Record forms for purging and sampling info.

1455 - Groundwater sampling completed for day. Samples collected by M. Lybrand:

MW-7	1210
NAB-7	1300
NAB-3	1355
NE-3	1450

Note: NE-3 Spring and

TSP-4 dry - no flow.
1545 - Collect Equipment Blank EB-1 from water level indicator. Deionized water from Ark. Analytical used.
1550 - Assist M. Dollar with landfill gas Monitoring - see field form. M. Dollar to gauge deep well NAB-4 with 200' W.L. indicator.
1630 - Prepare to leave site for day.
1645 - M. Lybrand leaves site. All groundwater samples on ice in ice chests - M. Dollar will secure samples overnight.

M.S. Hand

(22) 10/6/20 - NAS 025 LANDFILL

AM - Cool, mostly sunny.
PM - Clear, warm.
0700 - M. Lybrand arrives at site, prepares for groundwater sampling.
0725 - Calibrate YSI field meter - see calibration log.
0745 - Start purging MW-509, see field forms for purging and sampling data.
1201 - Mobilize to base to switch from peristaltic pump to submersible pump. Decon pump and flow-through cell.
1230 - Continue purging/sampling @ MW-577. See field forms. Pump and flow through cell decon'd between groundwater samples.
1645 - Groundwater sampling completed for day - decon pump and flow through cell. Groundwater samples collected

today:

MW-509D	0830
MW-509D Dup.	
CAO-3	0930
NE-6	1035
MW-689D	1120
CAO-1	1200
MW-577	1310
MW-2	1400
MW-3	1525
CAO-2	1640

1705 - Collect equipment blank EB-2 from decon'ed submersible pump.

1740 - Leave site for day. All samples on ice in ice chests. M. Dollar will secure samples overnight.

M. J. [illegible]

(24) 10/7/20 - NABORS LANDFILL
AM - Clear, mild.
PM - Clear, warm.
0700 - Mi. hybrid arrives at site, prepares for day's activities.
0715 - Calibrate YSI meter - see calibration log.
0745 - Spring A dry - no flow.
0755 - Start purging @ MW-6, see field forms.
0845 - Clear I Dram Spring dry, no flow.
Note - Pump and flow-through cell decon'd between groundwater samples.
1105 - Complete groundwater sampling w/ submersible pump; decon equipment.
1215 - Collect equipment blank EB-3 from flow-through cell.
1255 - Collect MW-2 groundwater sample using bailer. Well was purged by M. Dolan - no field measurements.

1310 - Prepare to leave site, load equipment. Groundwater samples collected today:

MW-6	0830
MW-1	0945
MW-1R	1100
MW-1R Dup.	1100
NE-2	1255

1345 - M. Lybrand leaves site for day. M. Dollar will deliver samples to lab. NOTE: Leachate truck was not operating this week - no leachate sample. M. Dollar will collect leachate sample during upcoming site visit. Samples collected 10/5/20 and 10/6/20 were picked up by Harbor courier for lab delivery today.

M. S. Lybrand

NABORS LANDFILL 5 OCTOBER 2020
SEMI-ANNUAL SAMPLING MONDAY
1 EVENT.
WEATHER: CLEAR SKIES, SLIGHT BREEZE, LOW 40's.
0754 M. DOLLAR ON SITE
0758 UNLOAD EQUIP, UTV, ETC...
M. LYBRAND ARRIVE
0858 ~~LTD~~ BEGIN G.P. MONITORING
0909 ARRIVE AT GP11.
0925 ARRIVE AT GP13.
1000 ARRIVE AT MAIN OFFICE.
1023 ARRIVE AT GP15.
1034 ARRIVE AT GP16R.
1048 ARRIVE AT SCALE HOUSE.
SEE PREVIOUS PAGE (S.W.) ~~1208~~ 1220 ARRIVE AT GP14R
1214 ARRIVE AT GP14
1242 ARRIVE AT GP17
1315 ARRIVE AT GP18R
1332 ARRIVE AT GP1.
1343 ARRIVE AT GP18, COVERED / SURROUNDED BY 4-5 FT ~~OF~~ TALL. VEGETATION
1402 ARRIVE AT GP-2.
1408 ARRIVE AT GP-3.
1418 ARRIVE AT GP-4.

NABORS CONT.
1430 ARRIVE AT GP-5.
1437 ARRIVE AT GP-6.
1456 ARRIVE AT GP-8.
1507 ARRIVE AT GP-7.
1515 ARRIVE AT GP-9
1527 ARRIVE AT GP-10
1549 ARRIVE AT LEACHATE TANKS
1600 ARRIVE AT MAB-4 TO MEASURE WATER LEVEL. KEYS DID NOT WORK. WILL HEAD BACK & TRY M. LYBRAND KEYS.
1623 M. LYBRAND WENT TO MEASURE MAB-4.

NABORS LANDFILL 6 OCT 2020
SEMI-ANNUAL SAMPLING TUESDAY
WEATHER: CLEAR SKIES, UPPER 40's.

0708 M. DOLLAR ON SITE, M. LYBRAND ALREADY ON SITE. UNLOAD EQUIPMENT, PREP FOR DAY.

0742 ~~M. DOLLAR~~ HEADED TO NAB-4.

0745 ARRIVE AT NAB-4, SET-UP WELL.

0829 BEGIN SAMPLING NAB-4. TROUBLE W/ FLOW RATE USING TRUCK BATTERY AS POWER SOURCE.

1000 NAB-4 COMPLETED, HEAD TO LEACHATE TANKS FOR DECON & TO ICE SAMPLES.

1006 NAB-8 BAILED, APPRX 1/3-GALLON, TO RECHARGE OVERNIGHT & SAMPLE.

1020 ARRIVE AT LEACHATE TANKS TO DECON EQUIPMENT.

1046 DECON COMPLETE, HEAD TO NE-2 TO BAIL & ALLOW TO RECHARGE.

1053 ARRIVE AT NE-2 TO BAIL.

NABORS CONT. 6 OCT. 2020

1128 NE-2 BAIL COMPLETE, APPRX. 2.5 GALLONS, HEAD TO NE-4. TUESDAY

1142 ARRIVE AT NE-4, SET UP WELL

1158 WELL SETUP COMPLETE, BEGIN SAMPLING.

1307 SAMPLE TAKEN AT NE-4.

1338 EQUIPMENT LOADED ON UTV, NE-4 LOCKED, HEAD TO LEACHATE TANKS FOR DECON.

1353 EQUIPMENT DECON COMPLETE, HEAD TO MW-4.

1400 ARRIVE AT MW-4; SETUP WELL.

1418 WELL SETUP COMPLETE, BEGIN SAMPLING MW-4.

1535 MW-4 COMPLETE, WELL LOCKED, EQUIP. LOADED HEAD TO LEACHATE TANK AREA FOR DECON.

1542 ARRIVE AT LEACHATE TANK AREA FOR DECON.

1606 DECON COMPLETE, HEAD TO MW-5.

1618 ARRIVE AT MW-5.
1628 MW-5 WELL SETUP COMPLETE, BEGIN SAMPLING.
1732 MW-5 COMPLETE, EQUIP. LOADED. HEAD TO LEACHATE TANK AREA FOR DECON.
1745 DECON COMPLETE, CLEAN UP FOR TOMORROW.
1815 M. DOLLAR OFF SITE.

NABORS LANDFILL 7th OCT. 2020
SEMI-ANNUAL WEDNESDAY
SAMPLING EVENT
WEATHER: CLEAR SKIES, SLIGHT BREEZE, MID 50S.
0658 M. DOLLAR ONSITE, M. LYBRAND ON SITE, PREP FOR DAY - LOAD EQUIP. & WELL SAMPLING PLAN.
0737 HEAD TO NAB-2.
0744 ARRIVE AT NAB-2, BEGIN WELL SETUP.
0800 WELL SETUP COMPLETE, BEGIN SAMPLING NAB-2
0842 NAB-2 SAMPLE COLLECTED
0908 SAMPLING COMPLETE, EQUIP LOADED. HEAD TO LEACHATE TANK AREA FOR DECON.
0912 CHECKED TSP-1 FOR FLOW, NO FLOW.
0925 ARRIVE AT LEACHATE TANK AREA FOR DECON.
0948 DECON COMPLETE, HEAD TO NAB-8 TO BAIL & SAMPLE.
0952 ARRIVE AT NAB-8, BEGIN BAILING.

NABORS CONT. 7 OCT. 2020

1004 NAB-8 DRY WEDNESDAY
NO SAMPLE TAKEN.

1015 ARRIVE AT CLASS IV DRAW, NO FLOW.

1023 UNLOAD EQUIP AT MW-633

1044 ARRIVE AT TSP-3, NO FLOW.

1055 ARRIVE AT LEACHATE TANK AREA TO PREP ITEMS FOR A. SMITH

1100 LOADED SAMPLES/EQUIP. W/ A. SMITH.

1115 A. SMITH OFF SITE

1119 ARRIVE AT MW-633D. BEGIN WELL SETUP.

1127 WELL SETUP COMPLETE, BEGIN SAMPLING MW-633D.

1258 MW-633D SAMPLE COLLECTED

1320 EQUIP LOADED, WELL COMPLETE, HEAD TO LEACHATE TANK AREA.

1325 ARRIVE AT LEACHATE TANK AREA. UNLOAD/LOAD EQUIP. DECON EQUIP.

1337 M. LYBRAND OFFSITE.

1357 HEAD TO LE SEEP

1415 ARRIVE AT LE SEEP.

1431 BEGIN READINGS

1439 SAMPLE COLLECTED FROM LE SEEP.

1445 HEAD TO SP-7.

1456 ARRIVE AT SP-7, BEGIN READINGS.

1514 SAMPLE COLLECTED FROM SP-7.

1521 ARRIVE AT LEACHATE TANK AREA.

1532 ARRIVE AT SP-4, NO FLOW.

1544 BEGIN NABORS LANDFILL BI-WEEKLY SITE INSPECTION.

1616 LOAD UTV & REMAINING EQUIPMENT.

1657 M. DOLLAR OFF SITE.

CASE NARRATIVE

Sample Delivery Group – 2010141

One *OR* more of the qualifiers described below may appear in this report. Qualifiers in RED apply to this SDG (Sample Delivery Group).

E31: The analytical results qualified by E31, may have been affected by a temperature exceedance which occurred due to a power outage or storage refrigerator failure.

ANALYTICAL QUALIFIERS:

Qualifier	Description
EDL	Result was non-detect at an elevated detection limit due to one or more of the following: Sample Matrix, Sample Dilution, or Limited Sample Volume.
EX	Result exceeds DAILY MAXIMUM and/or MONTHLY AVERAGE.
EX2	The result exceeds the TCLP limit.
J	At client request, J-Values are reported. J-Values are considered "estimated" results as they are below the limit of quantitation yet above the method detection limit (MDL).
N	Insufficient Sample Weight as Required by Method.
T40	The ambient temperature exceeded 23 +/- 2oC during the TCLP rotation process
TCLP-1	TCLP extraction done in alternate ZHE due to sample matrix.

CALIBRATION QUALIFIERS:

Qualifier	Description
CR	Result above highest calibration standard, but within linear calibration range.
Est3	Result at the instrument was above the concentration of the highest standard in the calibration curve.
E2-F	Second Source Verification Failure
E7	Internal Standard Response Failure
E11	Initial Calibration Minimum Response Factor Failure
E21	CCV Low
E-01	CCV High
E35	Low Level CCV Failure

QUALITY CONTROL QUALIFIERS:

Qualifier	Description
E20	Sample used as "parent" for the associated analytical batch.
%D3/S-01	Surrogate failed to recover within acceptance criteria (%D3/S-01).
E1	Results associated with this surrogate were qualified as "estimated" (E1).
B	Present in the Associated Blank
B1	Present in Blank, but Not In the Sample.
%D2 / E5	Laboratory Control Spike (LCS) and/or Laboratory Control Spike Duplicate (LCSD) failed to recover with acceptance criteria (%D2). Associated results were qualified as "estimated" (E5).
%D1	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) failed acceptance criteria.
MBA	Failed criteria due to the high concentration of analyte in the parent sample.
MBI	Failed criteria due to an interference in the parent sample.
%D3	Quality Control Surrogate failed acceptance criteria.
NREC	Quality Control Surrogate failed.

This report must be reproduced in its entirety.

ANALYTICAL RESULTS

Lab Number: **2010141-11**
Sample Name: **NE-6**
Date/Time Collected: **10/6/20 10:35**
Sample Matrix: **Water**

Anions	Units	Result	Qualifier(s)	Date/Time Analyzed	Batch	Method
Chloride	mg/L	**2.16**	E31	10/14/20 18:33	B010287	EPA 300.0, 2.1-1993
Sulfate as SO4	mg/L	**29.8**	E31	10/14/20 18:33	B010287	EPA 300.0, 2.1-1993

Total Metals	Units	Result	Qualifier(s)	Date/Time Analyzed	Batch	Method
Antimony	ug/L	< 2.08		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Arsenic	ug/L	**0.424**		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Barium	ug/L	**27.5**		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Beryllium	ug/L	< 0.260		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Cadmium	ug/L	**0.083**	J	10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Chromium	ug/L	**0.340**		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Cobalt	ug/L	**0.159**	J	10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Copper	ug/L	< 0.395		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Iron	ug/L	**73.8**		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Lead	ug/L	**0.110**	J	10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Manganese	ug/L	**2.93**		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Mercury	ug/L	< 0.200		10/14/20 15:00	B010252	SW7470A/EPA245.1,3.0- 1994
Nickel	ug/L	**0.25**	J	10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Selenium	ug/L	< 5.20		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Silver	ug/L	< 0.312		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Thallium	ug/L	**0.055**	J	10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Tin	ug/L	< 20.8		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Vanadium	ug/L	< 0.260		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014
Zinc	ug/L	**421**		10/22/20 15:34	B010363	SW 6020B, Rev 2-2014

Volatiles	Units	Result	Qualifier(s)	Date/Time Analyzed	Batch	Method
1,1,1,2-Tetrachloroethane	ug/L	< 1.00		10/9/20 18:15	B010187	SW 8260C, Rev 3, 2006

QUALIFIER(S)

*B:	Analyte Is Found In The Associated Blank
*E20:	Estimated Result Due to Matrix Spike and/or Matrix Spike Duplicate Failure; This sample was used as the "parent sample" in MS/MSD prep.
*E21:	Estimated Result; This Analyte failed (low) in the CCV.
*E31:	Analytical Results Qualified by E31. Results may have been affected by a temperature exceedance which occurred due to a power outage or storage refrigerator failure.
*J:	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
*MBI:	Masked By Interference

All Analysis performed according to EPA approved methodology when available:
SW 846, Revised December, 1996; EPA 600/4-79-020, Revised March, 1983; Standard Methods.
Instrument calibration and quality control samples performed at or above frequency specified in analytical method.

CASE NARRATIVE

Sample Delivery Group – 2010144

One *OR* more of the qualifiers described below may appear in this report. Qualifiers in RED apply to this SDG (Sample Delivery Group).

E31: The analytical results qualified by E31, may have been affected by a temperature exceedance which occurred due to a power outage or storage refrigerator failure.

ANALYTICAL QUALIFIERS:

Qualifier	Description
EDL	Result was non-detect at an elevated detection limit due to one or more of the following: Sample Matrix, Sample Dilution, or Limited Sample Volume.
EX	Result exceeds DAILY MAXIMUM and/or MONTHLY AVERAGE.
EX2	The result exceeds the TCLP limit.
J	At client request, J-Values are reported. J-Values are considered "estimated" results as they are below the limit of quantitation yet above the method detection limit (MDL).
N	Insufficient Sample Weight as Required by Method.
T40	The ambient temperature exceeded 23 +/- 2 oC during the TCLP rotation process
TCLP-1	TCLP extraction done in alternate ZHE due to sample matrix.

CALIBRATION QUALIFIERS:

Qualifier	Description
CR	Result above highest calibration standard, but within linear calibration range.
Est3	Result at the instrument was above the concentration of the highest standard in the calibration curve.
E2-F	Second Source Verification Failure
E7	Internal Standard Response Failure
E11	Initial Calibration Minimum Response Factor Failure
E21	CCV Low
E-01	CCV High
E35	Low Level CCV Failure

QUALITY CONTROL QUALIFIERS:

Qualifier	Description
E20	Sample used as "parent" for the associated analytical batch.
%D3/S-01	Surrogate failed to recover within acceptance criteria (%D3/S-01).
E1	Results associated with this surrogate were qualified as "estimated" (E1).
B	Present in the Associated Blank
B1	Present in Blank, but Not In the Sample.
%D2 / E5	Laboratory Control Spike (LCS) and/or Laboratory Control Spike Duplicate (LCSD) failed to recover with acceptance criteria (%D2). Associated results were qualified as "estimated" (E5).
%D1	Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) failed acceptance criteria.
MBA	Failed criteria due to the high concentration of analyte in the parent sample.
MBI	Failed criteria due to an interference in the parent sample.
%D3	Quality Control Surrogate failed acceptance criteria.
NREC	Quality Control Surrogate failed.

This report must be reproduced in its entirety.

Project: NABORS Landfill Sample(s)

Project Number: October 2020
Date Received: 08-Oct-20 10:12

ANALYTICAL RESULTS

Lab Number:	**2010144-01**
Sample Name:	**MW-6**
Date/Time Collected:	**10/7/20 8:30**
Sample Matrix:	**Water**

Volatiles	Units	Result	Qualifier(s)	Date/Time Analyzed	Batch	Method
Toluene	ug/L	< 1.00		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
trans-1,2-Dichloroethene	ug/L	< 1.00		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
trans-1,3-Dichloropropene	ug/L	< 1.00		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
Trichloroethene	ug/L	< 1.00		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
Trichlorofluoromethane	ug/L	< 2.00		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
Vinyl chloride	ug/L	< 2.00		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
4-Bromofluorobenzene [surr]	%	101		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
1,2-Dichloroethane-d4 [surr]	%	109		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006
Toluene-d8 [surr]	%	99.8		10/12/20 19:06	B010229	SW 8260C, Rev 3, 2006

Wet Chemistry	Units	Result	Qualifier(s)	Date/Time Analyzed	Batch	Method
Cyanide (total)	mg/L	< 0.010	E31	10/15/20 9:58	B010328	SM 4500-CN B,E-2011
Sulfide	mg/L	< 0.150	E31	10/12/20 16:08	B010239	SM 4500-S2 D-2011
TDS	mg/L	**477**	E31	10/14/20 8:30	B010272	SM 2540 C-2011
TOC	mg/L	**1.11**	E31	10/20/20 8:00	B010395	SM 5310 B-2011

QUALIFIER(S)

*B: Analyte Is Found In The Associated Blank
*E21: Estimated Result; This Analyte failed (low) in the CCV.
*E31: Analytical Results Qualified by E31. Results may have been affected by a temperature exceedance which occurred due to a power outage or storage refrigerator failure.
*J: Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
*MBI: Masked By Interference

5500 EVERGREEN DR.
LITTLE ROCK, AR

Project Description: NABORS LANDFILL

Reporting Information
Telephone: 501.663.8800
Fax:
Email: thuetter@harborenv.com

Turnaround Time: 1 Day (100%) / 2 Day (50%) / 3 Day (25%) / 5 Day (Routine)

Preservation Codes:
1. Cool, 4 Degrees Centigrade
2. Sulfuric Acid (H_2SO_4), pH < 2
3. Nitric Acid (HNO_3), pH < 2
4. Thiosulfate for Dechlorination
5. Hydrochloric Acid(HCl)
6. Sodium Hydroxide (NaOH), pH > 12

TEST PARAMETERS

Preservative Code:	1,5	1	1,6	1,6,2 Acetate	1,5	1,3				Bottle Type Code
Bottle Type:	GV	P	P	P	GV	P				G = Glass; P = Plastic; V = Septum; A = Amber
	VOLATILES	CHLORIDE, SULFATE, TDS	CYANIDE	SULFIDE	TOX	ICP/MS 6020 - Cr, As, Ba, Be, Cd, Cu, Co, Pb, Mn, Ni, Se, Ag, Tl, Sn, V, Zn), Hg				Arkansas Analytical Work Order Number: 20101144

Sampler(s) Signature: Michael Dollar
Sampler(s) Printed: MICHAEL DOLLAR

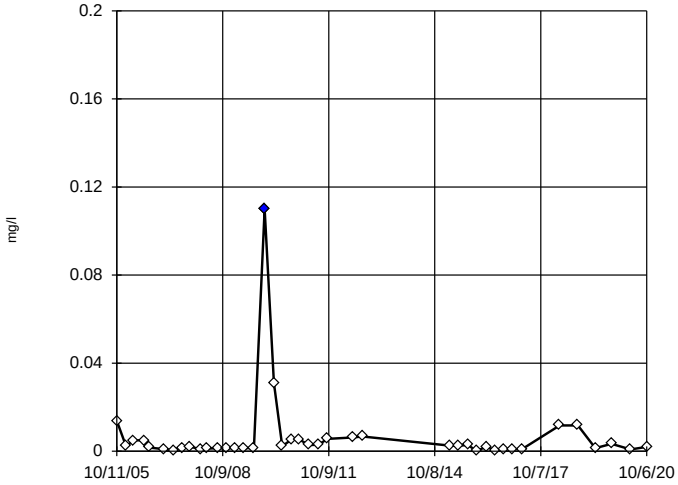
Rosner's Outlier Test

CAO-2



n = 41

Statistical outlier is drawn as solid.

k = 1
r = 3.066
Tabulated value = 2.99
Alpha = 0.01

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9561
Critical = 0.949 (after natural log transformation)
The distribution, after removal of suspect value, was found to be log-normal.

Constituent: Arsenic Analysis Run 11/17/2020 11:13 AM View: NABORS Database 4-2020
