**Re: Second Half 2023 Groundwater Monitoring Report
Eco-Vista, LLC, Class 1 Landfill
AFIN: 72-00144, Permit No.: 0290-S1-R4**

Dear Mr. Baggett:

Jett Environmental Consulting is pleased to submit the Second Half 2023 Groundwater Monitoring Report. In addition, on behalf of Eco-Vista, LLC, Jett Environmental Consulting is submitting this letter to satisfy the notification requirements of Arkansas Pollution Control and Ecology Commission Regulation No. 22.1204(c)(1). This notice has been placed in the facility operating record and as identified and discussed in the enclosed Report, summarizes the confirmed statistically significant increases on **Table A**. The Report also identified the following confirmed statistically significant levels above a groundwater protection standard: cadmium at MW-3N, MW-8N, and LGW-9; and cobalt at LGW-5, LGW-6, LGW-10, and MW-21.

Professional Geologist Certification

I certify that I am a qualified groundwater scientist who has received a baccalaureate or post-graduate degree in the natural sciences and am registered in the State of Arkansas. I have sufficient training and experience in geology, geohydrology, and groundwater hydrology that enable me to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.

I further certify that this summary report was prepared by me or by a subordinate working under my direction. Sampling was conducted by Promus Engineering, LLC, laboratory analytical testing was performed by Pace Analytical National, and statistical analyses were completed by Otter Creek Environmental Services, LLC.

If you have any questions or comments, please contact me at steve.jett@jettenviro.com or 314-496-4654.

Sincerely,

Steve Jett, P.G. No. 1826
Owner

1.0 INTRODUCTION

Eco-Vista, LLC operates the Eco-Vista Class 1 Municipal Solid Waste Landfill under Solid Waste Permit Number 290-S1-R4 (Permit) issued July 31, 2023. This report was prepared in accordance with the Permit and the Arkansas Department of Energy and Environment, Division of Environmental Quality (DEQ) approved Groundwater Sampling and Analysis Plan (GWSAP, Document 70560, dated November 2016).

The Eco-Vista Landfill is currently in a groundwater assessment/corrective action monitoring program pursuant to DEQ Regulation 22.1205. All procedures detailed in this document are designed to provide an accurate representation of groundwater quality at groundwater wells installed at the site and to be protective of human health and the environment.

This report covers the results of the two Second Half 2023 groundwater sampling events, which were conducted in third quarter (July 2023) and fourth quarter (October 2023). This report includes all field measurements, analytical data, statistical evaluation, and the associated potentiometric surface maps for the Second Half 2023. Sampling was conducted by Promus Engineering, LLC (Promus), laboratory analytical testing was performed by Pace Analytical National (Pace), and statistical analyses were completed by Otter Creek Environmental Services, LLC (Otter Creek).

2.0 SITE LOCATION

The facility is located at 2210 Waste Management Drive, approximately 2.5 miles south of Tontitown, primarily within Section 23, Township 17 North, Range 31 West, Washington County, Arkansas. **Figure 1** (See **Appendix A**) presents the location of the Eco-Vista Landfill.

3.0 SITE BACKGROUND AND MONITORING NETWORK

The current groundwater monitoring system consists of twenty-three wells designated as MW-1N, MW-2N, MW-3N, MW-7N, MW-8N, MW-10N, MW-11N, MW-15, MW-16, MW-17, MW-19, MW-20, MW-21, LGW-2, LGW-3R, LGW-4, LGW-5, LGW-6, LGW-7, LGW-8R, LGW-9, LGW-10, and LGW-14R (See **Figures 2** and **3** in **Appendix A**). The original seven “N” wells were installed in September 1997 by Anderson Engineering Consultants, Inc. (AECI) and Flippin Brothers, Inc., under the supervision of Genesis Environmental Consulting, Inc. (GEC). Ten LGW wells were installed by AECI under the supervision of Terracon Consultants, Inc. (Terracon) in September 2005. Monitoring wells LGW-8R and LGW-14R were installed in August 2008 by AECI and supervised by Terracon as replacement wells for LGW-8 and LGW-14. LGW-3 was damaged during site construction activities and was replaced with LGW-3R in June 2015 by AECI under the supervision of Chimney Rock Consulting (CRC). Monitoring wells MW-15, MW-16, MW-17, MW-19, MW-20, and MW-21 were installed in May 2015 by AECI and supervised by CRC in accordance with the site’s Permit.

During the Third Quarter 2019 event, wells NE-10 and NE-11 were not able to be sampled. Well NE-10 was dry, while well NE-11 was damaged. Well NE-11 was repaired in August 2019 with DEQ approval (Document 76629) and redeveloped prior to sampling in Fourth Quarter 2019. NE-10 was abandoned with DEQ approval (Document 76443) and replacement well NE-10D was installed in July 2019. Well NE-10D was first sampled in the Fourth Quarter 2019.

In addition, several Nature and Extent wells (NE-suffix) have been installed over the years ranging from September 2001 through July 2019. The Nature and Extent wells and Corrective Action Monitoring Program (CAMP) are discussed in detail in **Section 6.0**.

4.0 SECOND HALF 2023 SAMPLING EVENTS

According to Promus, the groundwater monitoring system was sampled in accordance with the Landfill Permit and the DEQ-approved GWSAP (Document 70560).

The Second Half 2023 sampling events were conducted in third quarter (July 2023) and fourth quarter (October 2023). The procedures for obtaining groundwater samples, parameters analyzed, and sample preservation and handling are discussed in the DEQ-approved GWSAP. Field measurements were recorded on Field Information Forms and are presented in **Appendices B** and **C**. A summary of the field measurements for the Second Half 2023 sampling events is presented on **Tables 2** and **3**. QA/QC samples were collected and submitted along with the groundwater samples to Pace. Laboratory analytical results and copies of the Chain-of-Custody forms are included in **Appendices B** and **C**.

During the Third Quarter 2023 event, the wells on **Table 1** were sampled for the full Assessment Monitoring Constituent (AMC) list. During the Fourth Quarter 2023 event, only the wells with Groundwater Protection Standard (GWPS) exceedances from the Third Quarter 2023 event were sampled for the AMC list. In addition, any well-parameter pairs with unverified statistical exceedances during the Third Quarter 2023 event were resampled in Fourth Quarter 2023. The results of the Third Quarter 2023 and Fourth Quarter 2023 sampling events are discussed in **Section 4.2**.

During the Third Quarter 2023 sampling event, wells MW-20 and NE-13 were dry and not able to be sampled. Also, during the Third Quarter 2023 and Fourth Quarter 2023 sampling events, well NE-15S was dry and not able to be sampled.

4.1 Groundwater Elevation, Flow Direction, & Flow Rate

Figures 2 and **3** in **Appendix A** present the groundwater potentiometric surface maps based on depth to water data measured in Third Quarter 2023 and Fourth Quarter 2023. **Tables 2** and **3** include the groundwater elevation data for the groundwater monitoring wells. During the Third Quarter 2023 and Fourth Quarter 2023 events, groundwater flow direction was generally to the southeast, consistent with past events.

To assist in calculating the average linear groundwater velocity, the hydraulic gradient of the bedrock system was measured from the figures. The groundwater velocities are then calculated from the following equation:

$$v = Ki/n$$

where:

v = groundwater flow velocity (feet/year)

K = hydraulic conductivity (feet/second)

i = hydraulic gradient (feet/feet)

n = effective porosity (dimensionless)

[with 31,536,000 feet/second to feet/year conversion factor]

Based on Chimney Rock Consulting's October 2013 "Hydrogeologic and Geotechnical Investigation Report, Major Permit Modification, Lateral Expansion Area, Eco-Vista Landfill" (Document 63689), slug tests were performed on the overburden, overburden/bedrock contact, and competent bedrock. Table 4.7 of the above document summarized the calculated hydraulic conductivities from the slug tests of the overburden/epikarst and the bedrock. For the overburden/epikarst, hydraulic conductivities ranged from 1.925×10^{-7} ft/sec to 8.927×10^{-5} ft/sec. For the competent bedrock, hydraulic conductivities ranged from 6.675×10^{-9} ft/sec to 3.037×10^{-5} ft/sec. Effective porosities were estimated as 20% for the overburden and overburden/bedrock contact and 3% for the competent bedrock.

Due to the wide range of hydraulic conductivities determined from the aquifer slug tests, a geometric mean calculation would be more representative for calculation of the groundwater flow rate. The geometric mean of the hydraulic conductivity was 7.57276×10^{-6} ft/sec for the overburden/epikarst and 2.31578×10^{-7} ft/sec for the bedrock. A hydraulic gradient of 0.017 feet/feet was calculated across the site for the Fourth Quarter 2023 event (see **Figure 3**). Therefore, the geometric mean of the groundwater flow rates would be approximately 20 ft/year for the overburden/epikarst and 4 ft/year for the bedrock.

The groundwater flow rates fall within the range consistent with past events. Groundwater at the site as a whole generally exists in a dual-porosity system and the flow rates provided above are estimates. The higher hydraulic conductivities and pore space in the epikarst would result in groundwater moving more laterally along the overburden/weathered bedrock interface rather than downward into the competent bedrock. In various discrete zones or preferential pathways, larger than average volumes of groundwater are possible in localized areas, as documented in previous site investigations.

4.2 Groundwater Results

During the Third Quarter 2023 event, the wells on **Table 1** were sampled for the full AMC list, with the exception of MW-20, NE-13, and NE-15S that were dry. During the Fourth Quarter 2023 event, the wells with GWPS exceedances from the Third Quarter 2023 event were sampled for the AMC list. In addition, well-parameter pairs with initial statistical exceedances identified during the Third Quarter 2023 event were resampled in Fourth Quarter 2023. As shown on **Tables 4** through **7**, the following results exceeded a GWPS during the Third Quarter 2023 event, and therefore; these wells were sampled for the AMC list in Fourth Quarter 2023: cadmium at MW-3N, MW-8N, LGW-9, NE-5E, and NE-9; and cobalt at LGW-5, LGW-6, LGW-10, MW-21, NE-5, NE-5E, and NE-5W. DEQ requested that the GWPS for cobalt be changed from 0.011 mg/L to 0.006 mg/L in a letter dated November 21, 2019 (Document 77318).

The full DEQ Regulation 22 Appendix 2 list is sampled annually (typically in third quarter) at the wells with GWPS exceedances during the previous calendar year. The site is required to sample each well on a triennial basis (i.e., 2024, 2027, 2030, etc.) for the full ADEQ Regulation 22 Appendix 2 list. Each well will be sampled for the full ADEQ Regulation 22 Appendix 2 list during the Third Quarter 2024 event, with the exception of the Nature & Extent wells, which are sampled for the AMC list.

The data presented in **Appendix D** represents the historical groundwater analytical results compiled since the monitoring system was first sampled at the site in October 1997. Attachment B within **Appendix E** provides the historical organic groundwater detections since October 1997. A comparison to applicable GWPSs and a summarization of the groundwater quality at all monitoring points for the Second Half 2023 sampling events are presented on **Tables 4** through **7**.

As shown on **Tables 4** through **7**, the following results exceeded a GWPS during the Fourth Quarter 2023 event: cadmium at MW-3N, MW-8N, LGW-9, NE-5E, and NE-9; and cobalt at LGW-6, LGW-10, MW-21, NE-5, and NE-5E. Results were generally consistent with past events.

During the Third Quarter 2023 and Fourth Quarter 2023 events, one volatile organic compound (VOC) was detected above the laboratory practical quantitation limit (PQL) at a quantified concentration at LGW-10 (1,4-dichlorobenzene) (see **Table 4** and **5**). The VOC detection at LGW-10 was consistent with previous events. None of the Third Quarter 2023 or Fourth Quarter 2023 VOC detections exceeded a GWPS. It is noted, LGW-10 (an interior point of compliance well) is installed immediately adjacent to the unlined pre-Subtitle D waste cells identified in historical documentation as Site 4.

The analytical results for monitoring wells and their corresponding field duplicate sample at LGW-6/DUP-1 and NE-12/DUP-2 were consistent for the Third Quarter 2023 event, with the exception of selenium in the DUP-1 duplicate sample. However, the duplicate result for selenium was consistent with historical results at LGW-6. The analytical results for monitoring wells and their corresponding field duplicate sample at NE-10D/DUP and NE-14D/DUP-2 were consistent for the Fourth Quarter 2023 events. Laboratory QA/QC analytical results and copies of the Chain-of-Custody forms are included in **Appendices B and C**.

4.3 Surface Water Results

In accordance with Permit Condition 40 of the Class 1 Permit, sampling must be conducted at the Wildcat Creek location just north of the intersection of County Road 31 (Harmon Road) and County Road 863 (Clear Water Road). Wildcat Creek must be sampled semi-annually for iron, manganese, total organic carbon (TOC), hardness, and the AMC list, while the site is in Assessment Monitoring. Per the Permit, the sampling results for the Wildcat Creek sampling are not subject to the groundwater monitoring regulations within Chapter 12 of Rule 22 and will not be statistically evaluated; however, graphs of detected parameters are to be included in the semi-annual reports.

Wildcat Creek was sampled during the Third Quarter 2023 event. Laboratory analytical results are included in **Appendix B**. Graphs of detected parameters are included in **Appendix F**.

5.0 STATISTICAL EVALUATION

The statistical evaluation was generated with the statistical analysis program DUMPStat™ and performed by Otter Creek. The statistical program was used to identify outliers, statistically significant trends; and to determine if statistically significant increases (or decreases in the case of pH) in parameter concentrations have occurred above background. The statistical evaluation was also utilized to determine whether parameter concentrations statistically exceed established GWPSs. A detailed explanation of the statistical methods applied, and results are summarized within **Appendix E** for the Second Half 2023.

5.1 Detection Monitoring Statistical Evaluation Results

Statistically derived intra-well statistical limits were calculated for each Assessment Monitoring well to determine if statistically significant increases have occurred above background.

Chloride and ammonia are not statistically evaluated during the quarterly events, but rather addressed in the Monthly Reports that are submitted per Permit 0290-S1-R4, Condition 42.

The Detection Monitoring statistical evaluation on all well-parameter pairs are provided in **Appendix E**. Multiple verified exceedances were identified based on the Third Quarter 2023 data. Verification sampling of the eleven initial exceedances noted in Third Quarter 2023 was completed in Fourth Quarter 2023. Statistical evaluation of the Fourth Quarter 2023 resampling results indicated six of the eleven initial exceedances exhibited verified exceedances: cadmium at LGW-8R; nickel at LGW-8R; TOC at LGW-2, LGW-4 and MW-7N; and zinc at LGW-8R.

As stated in **Section 4.2**, during the Third Quarter 2023 and Fourth Quarter 2023 events, a VOC was detected above the laboratory PQL at quantified concentrations at LGW-10 (1,4-dichlorobenzene) (see **Tables 4 and 5**). The VOC detections at LGW-10 were consistent with previous events. None of the Third Quarter 2023 or Fourth Quarter 2023 VOC detections exceeded a GWPS. It is noted, LGW-10 (an interior point of compliance well) is installed immediately adjacent to the unlined pre-Subtitle D waste cells identified in historical documentation as Site 4.

5.2 Assessment Monitoring Statistical Evaluation Results

Well-parameter pairs with verified statistical exceedances, verified GWPS exceedances, or verified VOC detections were evaluated against the GWPSs using confidence limits (**Appendix E**). The 95% lower confidence limit (LCL) for the mean of the data was used to evaluate whether the regulated unit was in compliance with the DEQ-approved GWPSs (e.g., whether the verified constituent is detected at a statistically significant level above the GWPS). An exceedance is verified if the LCL is above the GWPS.

The calculated LCLs for historically detected VOCs were below the respective GWPS for the Third Quarter 2023 event.

For the Third Quarter 2023 event, the LCL exceeded the GWPS for cobalt at LGW-5, LGW-6, LGW-10, and MW-21; and cadmium at LGW-9, MW-3N, and MW-8N. The cobalt and cadmium exceedances were consistent with recent events. Review of the cadmium and cobalt data for the above-mentioned GWPS exceedances indicates concentrations have been reported at either stable concentrations or decreasing during recent events at each well. It should be noted, cobalt at LGW-5 was reported as non-detect during the Fourth Quarter 2023 event.

The site is currently undergoing a corrective action program for cadmium and cobalt, as discussed in **Section 6.0** below.

Regarding cobalt, as reported in the USGS 2013 Document "*Geochemical and Mineralogical Data for Soils of the Conterminous United States*", Appendix 4a, cobalt was detected in native Arkansas soils ranging from 1.8 to 20.2 mg/kg in "C" (deeper) horizon from more than 60 samples collected. According to the Agency for Toxic Substances and Disease Registry (ATSDR) *Public Health Statement for Cobalt* (dated April 2004), cobalt is a naturally-occurring element with small amounts found naturally in most rocks, soil, water, plants, and animals. For most people, food is the largest source for the intake of cobalt (the non-radioactive isotope form). A biochemically important cobalt compound is vitamin B12, which is essential for good health in animals and humans. Metals in soil and bedrock can easily leach into the groundwater, especially if the groundwater is acidic (pH < 7.0 SU). Cobalt is considered somewhat mobile in acidic soils but less mobile as pH reaches neutrality. The pH of a majority of the groundwater samples from the site during the Third Quarter 2023 event were below 7.0 SU, and the pH of the samples from LGW-10 and NE-5, which had the highest cobalt concentrations, were 6.36 and 5.91 SU, respectively. The occurrence and levels of cobalt at the site has no indication of being related to a release from the waste unit.

6.0 CORRECTIVE ACTION MONITORING

On November 27, 2000, the site notified the DEQ that the Third Quarter 2000 sampling results from the Eco-Vista (formerly Tontitown) Landfill groundwater monitoring system had exceeded the approved GWPS for vinyl chloride (MW-1N and MW-7N) and cadmium (MW-7N and MW-8N).

The site implemented a corrective measures program under Reg.22.1208. This program was implemented in an effort to improve groundwater quality prior to the water leaving the site boundaries. This program included the installation of in-refuse and out-of-refuse gas extraction wells. The operation of this active source removal system (initiated in April 2001) included the extraction and treatment of gases and the collection of data needed to optimize future gas extraction system components.

6.1 Corrective Action Monitoring History

The site has been monitoring the effectiveness of the corrective action utilizing monitoring wells NE-1, NE-4, and NE-5 as monitoring points since 2001. In August 2011, the site submitted a

“Status of Groundwater Corrective Action” (Document 60765) to DEQ. In March 2014, DEQ provided comments on the “Status of Groundwater Corrective Action” and requested a work plan for the installation of additional wells and information regarding the site’s gas extraction system (Document 65639).

Three of the Nature and Extent wells (NE-1, NE-4, and NE-5) are monitored in accordance with the Corrective Action Monitoring Program (CAMP) for the site, which was approved by the DEQ in a letter dated December 16, 2004 (Document 25189). Well NE-3 is damaged and monitored for water elevation purposes only.

On June 12, 2014, a letter detailing the ongoing gas extraction efforts at the facility was submitted to DEQ (Document 66045). Document 69516 “Approval of Plan for Modification to the Gas Extraction System at the Eco-Vista Landfill” was received on May 5, 2016.

DEQ approved the final nature and extent work plan (Documents 70569 and 70585) and well installation began in December 2016. The installation of the eight new nature and extent wells (NE-6 through NE-13) at the site was completed in December 2016 and a field activity report was submitted to DEQ (Document 71488). Quarterly monitoring was conducted in 2017 and a report that discussed the findings of the nature and extent investigation was submitted to DEQ on January 19, 2018 (Document 73049). As stated in the January 2018 report, current corrective action at the site is based on impacts to groundwater from landfill gas. Beginning with the First Quarter 2019 event, wells NE-6 through NE-13 have been sampled semi-annually (per Document 74217).

In correspondence dated July 18, 2018, DEQ issued comments (Document 74217) on the Nature and Extent Report (Document 73049). In correspondence dated September 12, 2018, FTN Associates, Ltd. (FTN) issued a response (Document 74554) to the DEQ comments. In correspondence dated September 28, 2018, DEQ issued a response (Document 74635) to FTN’s comments. The site submitted a Nature and Extent Investigation (NEI) Phase 3 Work Plan (Document 75678) in February 2019 to address the DEQ comments. The Work Plan was approved by DEQ in a letter dated July 3, 2019 (Document 76443). NEI Phase 3 field activities were conducted in January 2021 in accordance with the conditionally approved NEI work plan and addendum to the work plan (Documents 75678, 76443, 76636, and 76645). Monitoring wells NE-5E, NE-5W, NE-6D, NE-10D, NE-14D, NE-14S, NE-15D, and NE-15S were completed by Walker-Hill Environmental, Inc and supervised by FTN. Monitoring well NE-10 was abandoned during these field activities per the NEI work plan and DEQ approval (Documents 75678 and 76443). The new monitoring wells were developed in August 2019. A groundwater monitoring well installation and abandonment report was submitted to DEQ on October 11, 2019 (Document 77170).

During the Third Quarter 2019 event, wells NE-10 and NE-11 were not able to be sampled. Well NE-10 was dry, while well NE-11 was damaged. Well NE-11 was repaired in August 2019 with DEQ approval (Document 76629) and redeveloped prior to sampling in Fourth Quarter 2019. NE-10 was abandoned with DEQ approval (Document 76443) and replacement well NE-10D was installed in July 2019. Well NE-10D was first sampled in the Fourth Quarter 2019.

The new monitoring wells, along with existing passive gas extraction wells EW-15 and EW-16, were initially sampled in Fourth Quarter 2019 and were sampled quarterly thereafter for a period of one year (Fourth Quarter 2019, First Quarter 2020, Second Quarter 2020, and Third Quarter 2020). Samples were analyzed for the landfill’s AMC list. Data from these events were submitted directly to DEQ from the laboratory and were presented in the landfill’s semi-annual groundwater monitoring reports.

On May 18, 2022, a Groundwater Corrective Action Status Update was submitted to DEQ. On November 28, 2023, an updated Groundwater Corrective Action Plan was submitted to DEQ.

6.2 Corrective Action Monitoring Results

During the Third Quarter 2023 event, GWPSs were exceeded for cadmium at NE-5E and NE-9; and cobalt at NE-5, NE-5E, and NE-5W. During the Fourth Quarter 2023 event, GWPSs were exceeded for cadmium at NE-5E and NE-9; and cobalt at NE-5 and NE-5E. The cadmium and cobalt concentrations at these wells have been reported at relatively stable levels over the last couple of years.

7.0 CONCLUSIONS

The following conclusions are based on the results of the Second Half 2023 groundwater sampling events and analytical testing:

- The water level data for the Third Quarter 2023 and Fourth Quarter 2023 sampling events indicated that the groundwater flow direction within the uppermost aquifer was generally to the southeast across the site, consistent with past events. Due to the wide range of hydraulic conductivities determined from past aquifer slug tests, a geometric mean calculation would be more representative for calculation of the groundwater flow rate. A hydraulic gradient of 0.017 feet/foot was calculated across the site for the Fourth Quarter 2023 event. The geometric mean of the groundwater flow rates were calculated to be approximately 20 ft/year for the overburden/epikarst and 4 ft/year for the bedrock.
- The groundwater flow rates fall within the range consistent with past events. Groundwater at the site as a whole generally exists in a dual-porosity system and the flow rates provided above are estimates. The higher hydraulic conductivities and pore space in the epikarst would result in groundwater moving more laterally along the overburden/weathered bedrock interface rather than downward into the competent bedrock. In various discrete zones or preferential pathways, larger than average volumes of groundwater are possible in localized areas, as documented in previous site investigations.
- The following inorganic results exceeded a GWPS during the Third Quarter 2023 event: cadmium at MW-3N, MW-8N, LGW-9, NE-5E, and NE-9; and cobalt at LGW-5, LGW-6, LGW-10, MW-21, NE-5, NE-5E, and NE-5W. The following results exceeded a GWPS during the Fourth Quarter 2023 event: cadmium at MW-3N, MW-8N, LGW-9, NE-5E, and NE-9; and cobalt at LGW-6, LGW-10, MW-21, NE-5, and NE-5E.
- During the Third Quarter 2023 and Fourth Quarter 2023 events, a VOC was detected above the laboratory PQL at quantified concentrations at LGW-10 (1,4-dichlorobenzene). The VOC detections at LGW-10 were consistent with previous events. None of the Third Quarter 2023 or Fourth Quarter 2023 VOC detections exceeded a GWPS. It is noted, LGW-10 (an interior point of compliance well) is installed immediately adjacent to the unlined pre-Subtitle D waste cells identified in historical documentation as Site 4.

Statistical Evaluation

- The Detection Monitoring statistical evaluation on all well-parameter pairs are provided in **Appendix E**. The trace metals and inorganic indicator data were statistically compared to background using control charts/prediction limits. Multiple verified exceedances were identified based on the Third Quarter 2023 data. Verification sampling of the eleven initial exceedances noted in Third Quarter 2023 was completed in Fourth Quarter 2023. Statistical evaluation of the Fourth Quarter 2023 resampling results indicated six of the ten initial exceedances exhibited verified exceedances: cadmium at LGW-8R; nickel at LGW-8R; TOC at LGW-2, LGW-4, and MW-7N; and zinc at LGW-8R.

- Due to verified statistical limit exceedances, GWPS exceedances, or confirmed VOCs, select wells and parameters were evaluated using assessment statistics. The calculated LCLs for historically detected VOCs were below the respective GWPS for the Third Quarter 2023 event. For the Third Quarter 2023 event, the LCL exceeded the GWPS for cobalt at LGW-5, LGW-6, LGW-10, and MW-21; and cadmium at LGW-9, MW-3N, and MW-8N. It should be noted, cobalt at LGW-5 was reported as non-detect during the Fourth Quarter 2023 event.
- Review of the cadmium and cobalt data for the above GWPS exceedances indicates concentrations have been reported at either stable concentrations or decreasing during recent events at each well.

Corrective Action

- A summary of the statistical evaluation for corrective action is found in **Appendix E**.
- Corrective action is currently on-going at the site. The site is closely monitoring the carbon dioxide levels and adjustments to the entire gas extraction system are routinely made to optimize the removal of carbon dioxide.
- A report discussing the findings of the most recent nature and extent investigation was submitted to DEQ on September 9, 2021 (Document 80807). As stated in the September 2021 report, current corrective action at the site is based on impacts to groundwater from landfill gas.
- On May 18, 2022, a Groundwater Corrective Action Status Update was submitted to DEQ.
- On November 28, 2023, a Groundwater Corrective Action Monitoring Plan was submitted to DEQ.

Monthly Indicator Monitoring

- In accordance with the Eco-Vista Landfill Permit Number 0290-S1-R4 Conditions 31 and 38, the Landfill is required to conduct monthly sampling for the indicator parameters pH, specific conductance, ammonia, and chloride.
- The monthly indicator monitoring program during the second half of 2023 determined no “significant finding” with regard to groundwater quality data. As such, no further actions were required by the landfill and routine monthly monitoring and reporting will continue for this program.
- In accordance with the Permit, the Landfill began recording daily volume and rate data from the leak detection system (LDS) and leachate collection system (LCS) since construction of the first cell in the lateral expansion area was completed. In addition, in accordance with the site’s Action Leakage Rate Contingency Plan (Document 18104, dated August 22, 2002), a table of daily volume and rate data is included in each monthly report that is submitted to DEQ.

Upcoming Monitoring

The next quarterly monitoring event (first quarter) is scheduled to be conducted in January 2024.

	<i>Per Permit Condition 38(b), semi-annual sampling for the AMC list during the 1st and 3rd Quarter and any * well/parameter that exceeds a GWPS during the prior quarter is sampled during the 2nd and 4th Quarter, respectively.</i>			
Notes: 1	AMC – Parameter list consists of Regulation 22 Appendix 1 parameters, Regulation 22.1204(d) parameters, and those parameters detected from the full Appendix 2 Sampling Event that are not already on the Appendix 1 parameter list (none to date).			
2	Ammonia, chloride, pH, and specific conductance required per Permit 0290-S1-R3 Condition 38(a).			
3	Per Permit Condition 38(c), full Appendix 2 sampling at all the wells will be completed on a Triennial basis beginning in 2015 (e.g., 2015, 2018, 2021, etc.). The full list of Appendix 2 parameters will also be sampled annually at the wells with parameters which had an exceedance of the GWPS the previous calendar year. Typically in July.			
4	Quarterly sampling of the AMC list at NE-1, NE-2, NE-4, and NE-5 governed by the GWSAP and CAMP, with the remaining NE-wells governed by the Phase 3 NEI Work Plan.			
5	Semi-annual sampling during the 1 st and 3 rd Quarter per the Phase 3 NEI Work Plan.

CASE NARRATIVE

Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Stacy Kennedy
Project Manager

Project Comments

The requested project specific reporting limits may be less than laboratory standard quantitation limits (PQL) but will be greater than or equal to the laboratory method detection limits (MDL). It is noted that results reported below lab standard quantitation limits (PQLs) may result in false positive/false negative values that may require additional laboratory quality assurance review, if requested. Routine laboratory procedures do not initiate a data review process for detections below the laboratory's PQL unless requested by the client.

Gravimetric Analysis by Method 2540 C-2011

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2093348	(DUP) R3948623-4	Dissolved Solids

Metals (ICP) by Method 6010B

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG2092145	(MSD) R3949977-5	Sodium, Total Recoverable

Additional Information - Results for field analyses are not accredited to ISO 17025

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
V	The sample concentration is too high to evaluate accurate spike recoveries.

CASE NARRATIVE

Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Stacy Kennedy
Project Manager

Project Comments

The requested project specific reporting limits may be less than laboratory standard quantitation limits (PQL) but will be greater than or equal to the laboratory method detection limits (MDL). It is noted that results reported below lab standard quantitation limits (PQLs) may result in false positive/false negative values that may require additional laboratory quality assurance review, if requested. Routine laboratory procedures do not initiate a data review process for detections below the laboratory's PQL unless requested by the client.

Gravimetric Analysis by Method 2540 C-2011

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2094125	(DUP) R3949273-4	Dissolved Solids
WG2094232	(DUP) R3949810-4	Dissolved Solids
WG2094878	(DUP) R3949943-4, L1633864-02	Dissolved Solids

Wet Chemistry by Method 350.1

RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Batch	Lab Sample ID	Analytes
WG2092799	(DUP) R3947829-7, L1633864-13	Ammonia Nitrogen

Wet Chemistry by Method 9056A

The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Batch	Lab Sample ID	Analytes
WG2096705	(MSD) R3949944-5	Chloride

Metals (ICP) by Method 6010B

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG2092916	(MS) R3948019-4, (MSD) R3948019-5	Calcium, Total Recoverable and Sodium, Total Recoverable

CASE NARRATIVE

Metals (ICPMS) by Method 6020

The same analyte is found in the associated blank.

Batch	Analyte	Lab Sample ID
WG2092924	Zinc, Total Recoverable	L1633864-01, 02, 03, 04, 05, 06, 07, 08, 10, 12, 13

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG2092924	(MS) R3948842-4, (MSD) R3948842-5	Zinc, Total Recoverable

Volatile Organic Compounds (GC/MS) by Method 8260B

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
V	The sample concentration is too high to evaluate accurate spike recoveries.

FIELD INFORMATION FORM

Site Name: EVLF Low-7
 Site No.:
 Sample Point: MW 17
 Sample ID:

This Waste Management Field Information Form is Required
 This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID:
U1633864

PURGE INFO
 PURGE DATE: 07/10/23 PURGE TIME: 10:00 ELAPSED HRS:
 WATER VOL IN CASING: ACTUAL VOL PURGED: WELL VOLS PURGED:
(MM DD YY) (2400 Hr Clock) (hrs:min) (Gallons) (Gallons) (ft/msl)
 Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT
 Purging and Sampling Equipment ... Dedicated: Y or N
 Purging Device: C A- Submersible Pump D-Bailer
 Sampling Device: C B-Peristaltic Pump E-Piston Pump
 X-Other: C-QED Bladder Pump F-Dipper/Bottle
 Filter Device: Y or X 0.45 μ or μ (circle or fill in)
 Filter Type: A-In-line Disposable C-Vacuum
 B-Pressure X-Other
 Sample Tube Type: D A-Teflon C-PVC X-Other:
 B-Stainless Steel D-Polypropylene

WELL DATA
 Well Elevation (at TOC): (ft/msl) Depth to Water (DTW) (from TOC): 43.17 (ft) Groundwater Elevation (site datum, from TOC): (ft/msl)
 Total Well Depth (from TOC): (ft) Stick Up (from ground elevation): (ft) Casing ID: 2 (in) Casing Material: PVC
 Note: Total Well Depth, Stick Up, Casing Id, etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (umhos/cm @ 25 °C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
10:05	250 1 st	8.00	564	19.5	5.0	6.8	155.8	43.85
10:10	250 2 nd	7.30	520	19.4	4.2	4.1	155.2	43.85
10:15	250 3 rd	6.90	555	19.1	4.4	3.4	159.2	43.85
10:20	250 4 th	6.67	605	19.1	3.8	2.7	167.5	43.85
10:25	250	6.46	658	19.1	3.7	2.0	176.8	43.85
10:30	250	6.41	667	19.1	3.8	1.9	178.3	43.85
10:35	250	6.40	669	19.0	3.8	1.8	179.2	43.85

Suggested range for 3 consec. readings or note Permit/State requirements:
 pH: +/- 0.2 Conductance: +/- 3% Temp: -- Turbidity: -- D.O.: +/- 10% eH/ORP: +/- 25 mV DTW: Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

FIELD DATA
 SAMPLE DATE (MM DD YY): 07/10/23 pH (std): 6.40 CONDUCTANCE (umhos/cm @ 25°C): 669 TEMP. (°C): 19.0 TURBIDITY (ntu): 3.8 DO (mg/L-ppm): 1.8 eH/ORP (mV): 179.2 Other:
 Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

Sample Appearance: Clear Odor: None Color: Clear Other:
 Weather Conditions (required daily, or as conditions change): Sunny Direction/Speed: SE 5 mph Outlook: Clear 90° Precipitation: Y or N
 Specific Comments (including purge/well volume calculations if required):

Suggested range for 3 consec. readings or note Permit/State requirements: pH +/- 0.2, Conductance +/- 3%, Temp. --, Turbidity --, D.O. +/- 10%, eH/ORP +/- 25 mV, Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/State. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

FIELD DATA
 SAMPLE DATE (MM DD YY): 07/02/23 pH (std): 6.23 CONDUCTANCE (umhos/cm @ 25°C): 581 TEMP. (°C): 17.5 TURBIDITY (ntu): 4.2 DO (mg/L-ppm): 5.6 eH/ORP (mV): 1.78.1 Other:
 Units

Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/State).

Sample Appearance: clear Odor: none Color: clear Other:
 Weather Conditions (required daily, or as conditions change): Direction/Speed: Outlook: Precipitation: Y or N
 Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: Units
071023	6.42	779	16.9	3.7	0.2	172.2	

Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

Sample Appearance: Clear Odor: NONE Color: Clear Other:
 Weather Conditions (required daily, or as conditions change): Direction/Speed: Outlook: Precipitation: Y or N
 Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):
7/10/23 C. Finley [Signature] Proimus
 Date Name Signature Company

DISTRIBUTION: WHITE/ORIGINAL - Stays with Sample, YELLOW - Returned to Client

FIELD INFORMATION FORM

Site Name: EVLF
 Site No.: Sample Point: LGW-9
 Sample ID

This Waste Management Field Information Form is Required
 This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID:
L1633864

PURGE INFO
 PURGE DATE: 07/10/23 PURGE TIME: 13:30 ELAPSED HRS: WATER VOL IN CASING: ACTUAL VOL PURGED: WELL VOLS PURGED:

CASE NARRATIVE

Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Stacy Kennedy
Project Manager

Project Comments

The requested project specific reporting limits may be less than laboratory standard quantitation limits (PQL) but will be greater than or equal to the laboratory method detection limits (MDL). It is noted that results reported below lab standard quantitation limits (PQLs) may result in false positive/false negative values that may require additional laboratory quality assurance review, if requested. Routine laboratory procedures do not initiate a data review process for detections below the laboratory's PQL unless requested by the client.

Sample Delivery Group (SDG) Narrative

The laboratory analysis was performed from an unpreserved, insufficiently or inadequately preserved sample.

Batch	Method	Lab Sample ID
WG2097397	9060A	L1632964-20

Wet Chemistry by Method 9060A

RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Batch	Lab Sample ID	Analytes
WG2097397	(DUP) R3950509-5, L1632964-05	TOC

Metals (ICP) by Method 6010B

The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.

Batch	Lab Sample ID	Analytes
WG2091021	L1632964-03	Calcium, Total Recoverable

Volatile Organic Compounds (GC/MS) by Method 8260B

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG2091714	(LCS) R3947881-2, L1632964-01, 02, 03, 04, 05, 06, 07, 08, 09	2-Hexanone
WG2091743	(LCS) R3946635-1, L1632964-10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20	1,1,2-Trichloroethane and Dibromomethane

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2091743	(LCSD) R3946635-2, L1632964-10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20	Vinyl acetate

CASE NARRATIVE

Volatile Organic Compounds (GC/MS) by Method 8260B

The sample matrix interfered with the ability to make any accurate determination; spike value is high.

Batch	Lab Sample ID	Analytes
WG2091743	(MS) R3946635-4, (MSD) R3946635-5	Bromomethane

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Suggested range for 3 consec. readings or note Permit/State requirements: pH +/- 0.2, Conductance +/- 3%, Temp. --, Turbidity --, D.O. +/- 10%, eH/ORP +/- 25 mV, DTW Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

FIELD DATA
 SAMPLE DATE (MM DD YY): 070623
 pH (std): 6.13
 CONDUCTANCE (umhos/cm @ 25°C): 607
 TEMP. (°C): 17.5
 TURBIDITY (ntu): 3.8
 DO (mg/L - ppm): 0.9
 eH/ORP (mV): 193.1
 Other:
 Units:

Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

Sample Appearance: Clear Odor: None Color: Clear Other:
 Weather Conditions (required daily, or as conditions change): Direction/Speed: Outlook: Precipitation: or N
 Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

- Parameter(s) past holding time
- Temperature not in range
- Improper container type
- pH not in range
- Insufficient sample volume
- Sample is biphasic
- Vials received with headspace
- Broken container
- Sufficient sample remains
- If broken container: Insufficient packing material around container
- If broken container: Insufficient packing material inside cooler
- If broken container: Improper handling by carrier: _____
- If broken container: Sample was frozen
- If broken container: Container lid not intact

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Stacy Kennedy
Project Manager

Report Revision History

Level II Report - Version 1: 07/26/23 12:42

Project Comments

Customer requested review of selenium method 200.7. -02, -03, -04, -05 selenium were reanalyzed after data review request. The results in this report have been updated to reflect the reanalysis results. SK 8/25/23

The requested project specific reporting limits may be less than laboratory standard quantitation limits (PQL) but will be greater than or equal to the laboratory method detection limits (MDL). It is noted that results reported below lab standard quantitation limits (PQLs) may result in false positive/false negative values that may require additional laboratory quality assurance review, if requested. Routine laboratory procedures do not initiate a data review process for detections below the laboratory's PQL unless requested by the client.

Sample Delivery Group (SDG) Narrative

The laboratory analysis was performed from an unpreserved, insufficiently or inadequately preserved sample.

Batch	Method	Lab Sample ID
WG2092801	350.1	L1633891-06, 07, 08, 09, 10, 11, 12, 14, 15, 16, 17, 20, 21, 22, 23
WG2092818	353.2	L1633891-20, 21, 22, 23, 27, 28
WG2094637	350.1	L1633891-27, 28

Gravimetric Analysis by Method 2540 C-2011

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2093348	(DUP) R3948623-4	Dissolved Solids

Wet Chemistry by Method 350.1

RPD value not applicable for sample concentrations less than 5 times the reporting limit.

Batch	Lab Sample ID	Analytes
WG2092799	(DUP) R3947829-7	Ammonia Nitrogen

CASE NARRATIVE

Wet Chemistry by Method 9056A

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG2097280	(MS) R3950233-4, L1633891-18	Chloride
WG2097563	(MS) R3950797-3, (MSD) R3950797-4	Sulfate

Volatile Organic Compounds (GC/MS) by Method 8260B

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG2093479	(LCS) R3948671-1, L1633891-01, 02, 03, 04, 05	Vinyl acetate

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
P1	RPD value not applicable for sample concentrations less than 5 times the reporting limit.
V	The sample concentration is too high to evaluate accurate spike recoveries.

FIELD INFORMATION FORM

Site Name: EVLF
 Site No.: Sample Point: NE 100
 Sample ID

This Waste Management Field Information Form is Required
 This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID:
L1633891

PURGE INFO: 070823 | 1330 | | | |
PURGE DATE (MM DD YY) | **PURGE TIME** (2400 Hr Clock) | **ELAPSED HRS** (hrs:min) | **WATER VOL IN CASING** (Gallons) | **ACTUAL VOL PURGED** (Gallons) | **WELL VOLS PURGED**
Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGING AND SAMPLING EQUIPMENT ... Dedicated: Y or X
 Purging Device: A A-Submersible Pump D-Bailer | Filter Device: Y or N | 0.45 μ or μ (circle or fill in)
 Sampling Device: A B-Peristaltic Pump E-Piston Pump | Filter Type: | A-In-line Disposable C-Vacuum
 X-Other: | C-QED Bladder Pump F-Dipper/Bottle | B-Pressure X-Other:
 Sample Tube Type: D | A-Teflon C-PVC X-Other:
 B-Stainless Steel D-Polypropylene

WELL DATA: Well Elevation (at TOC) (ft/msl) | Depth to Water (DTW) (from TOC) 101.28 (ft) | Groundwater Elevation (site datum, from TOC) (ft/msl)
 Total Well Depth (from TOC) (ft) | Stick Up (from ground elevation) (ft) | Casing ID 2 (in) | Casing Material PVC
Note: Total Well Depth, Stick Up, Casing Id, etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (umhos/cm @ 25°C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
13:35	300 1 st	9.55	240	17.6	718	7.9	146.6	101.45
13:40	300 2 nd	6.23	241	17.8	470	8.0	151.0	101.45
13:45	300 3 rd	5.93	241	17.9	328	8.1	155.1	101.45
13:50	300 4 th	5.81	239	17.6	189	8.1	159.6	101.45
13:55	300	5.80	239	18.1	142	8.1	160.6	101.45
14:00	300	5.78	238	17.9	91	8.1	161.5	101.45

Suggested range for 3 consec. readings or note Permit/State requirements: pH +/- 0.2 | Conductance +/- 3% | Temp. - | Turbidity - | D.O. +/- 10% | eH/ORP +/- 25 mV | DTW Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

FIELD DATA: SAMPLE DATE (MM DD YY) 070823 | pH (std) 5.78 | CONDUCTANCE (umhos/cm @ 25°C) 238 | TEMP. (°C) 17.9 | TURBIDITY (ntu) 91 | DO (mg/L-ppm) 8.1 | eH/ORP (mV) 161.5 | Other:
 Sample Appearance: Clear | Odor: None | Color: Clear | Other:
 Weather Conditions (required daily, or as conditions change): | Direction/Speed: | Outlook: | Precipitation: Y or N
 Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS:

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):
7.8.23 | C. Funder | |
 Date | Name | Signature | Company

DISTRIBUTION: WHITE/ORIGINAL - Stays with Sample, YELLOW - Returned to Client

18:35	200	6.18	366	18.0	5.0	6.5	166.3	63.55

Suggested range for 3 consec. readings or note Permit/State requirements:
 pH: +/- 0.2 Conductance: +/- 3% Temp: -- Turbidity: -- D.O.: +/- 10% eH/ORP: +/- 25 mV DTW: Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

FIELD DATA
 SAMPLE DATE (MM DD YY): 07/08/23 pH (std): 6.18 CONDUCTANCE (umhos/cm @ 25°C): 366 TEMP. (°C): 18.0 TURBIDITY (ntu): 5.0 DO (mg/L-ppm): 6.5 eH/ORP (mV): 166.3 Other:
 Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

Sample Appearance: clear Odor: NONE Color: clear Other:
 Weather Conditions (required daily, or as conditions change): Direction/Speed: Outlook: Precipitation: Y or N
 Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Hailey Melson (responsible)

Stacy Kennedy

Due on 14 July 2023 8:00 AM for target Done

- Parameter(s) past holding time
- Temperature not in range
- Improper container type
- pH not in range
- Insufficient sample volume
- Sample is biphasic
- Vials received with headspace
- Broken container
- Sufficient sample remains
- If broken container: Insufficient packing material around container
- If broken container: Insufficient packing material inside cooler
- If broken container: Improper handling by carrier: _____
- If broken container: Sample was frozen
- If broken container: Container lid not intact
- Client informed by Call
- Client informed by Email
- Client informed by Voicemail
- Date/Time: _____
- PM initials: _____
- Client Contact: _____

Comments

- Hailey Melson* *11 July 2023 1:45 PM*
 pH out of range for all LCS IDs. Sample reacted with Sulfuric so no samples were preserved.
- Stacy Kennedy* *11 July 2023 2:08 PM*
 Noted. Please proceed with analysis. These are a leachate-type matrix.
- Hailey Melson* *11 July 2023 2:09 PM*
 Done

Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Stacy Kennedy
Project Manager

Report Revision History

Level II Report - Version 1: 10/22/23 20:33

Project Comments

L1663702-01, sample "DUP", ammonia container was not received. Lab proceeded with all other analysis. SK 10/16/23

-17 TDS was initially analyzed within holding time. The lab reanalyzed the sample upon data review; however, sample hold time was not met. SK 10/19/23

Report reissued to update project specific reporting limits per request. SK 10/26/23

The requested project specific reporting limits may be less than laboratory standard quantitation limits (PQL) but will be greater than or equal to the laboratory method detection limits (MDL). It is noted that results reported below lab standard quantitation limits (PQLs) may result in false positive/false negative values that may require additional laboratory quality assurance review, if requested. Routine laboratory procedures do not initiate a data review process for detections below the laboratory's PQL unless requested by the client.

Sample Delivery Group (SDG) Narrative

pH outside of method requirement.

Batch	Method	Lab Sample ID
WG2148873	8270C	L1663702-06

Sample was prepared and/or analyzed past recommended holding time. Concentrations should be considered minimum values.

Batch	Method	Lab Sample ID
WG2150228	2540 C-2011	L1663702-17

Gravimetric Analysis by Method 2540 C-2011

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2148179	(DUP) R3985480-3, (DUP) R3985480-4	Dissolved Solids
WG2148182	(DUP) R3985447-4	Dissolved Solids

CASE NARRATIVE

Wet Chemistry by Method 9056A

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG2149864	(MS) R3987601-5, (MSD) R3987601-6	Chloride

The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Batch	Lab Sample ID	Analytes
WG2149864	(MS) R3987601-5, (MSD) R3987601-6	Sulfate
WG2149878	(MS) R3986850-7	Sulfate

Metals (ICPMS) by Method 6020

The sample matrix interfered with the ability to make any accurate determination; spike value is high.

Batch	Lab Sample ID	Analytes
WG2146872	(MSD) R3985095-5, L1663702-01	Chromium, Total Recoverable, Copper, Total Recoverable and Nickel, Total Recoverable

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2146872	(MSD) R3985095-5, L1663702-01	Chromium, Total Recoverable, Copper, Total Recoverable and Nickel, Total Recoverable

Volatile Organic Compounds (GC/MS) by Method 8260B

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG2147452	(LCS) R3983704-1, (LCSD) R3983704-2, L1663702-01, 02, 12, 13, 14, 15, 16	Chloromethane

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2147154	(LCSD) R3984821-2, L1663702-06	Vinyl acetate
WG2148115	(LCSD) R3985695-2, L1663702-17, 18, 19, 20, 21, 22	1,2-Dibromo-3-Chloropropane and 2-Butanone (MEK)

Chlorinated Acid Herbicides (GC) by Method 8151

RPD between the primary and confirmatory analysis exceeded 40%

Batch	Lab Sample ID	Analytes
WG2145481	(LCS) R3984708-2	2,4,5-T
WG2145481	(LCSD) R3984708-3	2,4,5-T and 2,4-D

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2145481	(LCSD) R3984708-3, L1663702-06	2,4,5-T, 2,4,5-Tp (Silvex) and 2,4-D

Semi Volatile Organic Compounds (GC/MS) by Method 8270C

The associated batch QC was below the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG2148873	(LCS) R3987287-1, L1663702-06	1,4-Naphthoquinone, 3,3-Dimethylbenzidine and p-Phenylenediamine

The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Batch	Lab Sample ID	Analytes
WG2148873	(MS) R3986579-3	Indeno(1,2,3-cd)pyrene

CASE NARRATIVE

Semi Volatile Organic Compounds (GC/MS) by Method 8270C

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2148873	(MSD) R3986579-4	2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2,4-Dimethylphenol, 2-Methylphenol, 4-Chloro-3-methylphenol and Hexachlorocyclopentadiene

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P	RPD between the primary and confirmatory analysis exceeded 40%.
Q	Sample was prepared and/or analyzed past holding time as defined in the method. Concentrations should be considered minimum values.
V	The sample concentration is too high to evaluate accurate spike recoveries.

FIELD INFORMATION FORM

Site Name: EVLF
 Site No.:
 Sample Point: LCW-2
 Sample ID

This Waste Management Field Information Form is Required
 This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID: _____

PURGE INFO
 PURGE DATE (MM DD YY): 10 04 23
 PURGE TIME (2400 Hr Clock): 11:00
 ELAPSED HRS (hrs:min):
 WATER VOL IN CASING (Gallons):
 ACTUAL VOL PURGED (Gallons):
 WELL VOLS PURGED:

Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ "Water Vol in Tubing/Flow Cell" and "Tubing/Flow Cell Vols Purged". Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT
 Purging and Sampling Equipment ... Dedicated: Y or N
 Purging Device: A-Submersible Pump D-Bailer
 Sampling Device: B-Peristaltic Pump E-Piston Pump
 X-Other: _____
 Filter Device: Y or N 0.45 μ or _____ μ (circle or fill in)
 Filter Type: _____
 Sample Tube Type: 0
 A-In-line Disposable C-Vacuum
 B-Pressure X-Other _____
 A-Teflon C-PVC X-Other: _____
 B-Stainless Steel D-Polypropylene

WELL DATA
 Well Elevation (at TOC) _____ (ft/msl)
 Depth to Water (DTW) (from TOC) 7278 (ft)
 Groundwater Elevation (site datum, from TOC) _____ (ft/msl)
 Total Well Depth (from TOC) _____ (ft)
 Stick Up (from ground elevation) _____ (ft)
 Casing ID 2 (in) Casing Material PVC

Note: Total Well Depth, Stick Up, Casing Id, etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (umhos/cm @ 25 °C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
<u>11:05</u>	<u>200</u>	<u>6.10</u>	<u>216</u>	<u>20.4</u>	<u>6.9</u>	<u>6.7</u>	<u>169.5</u>	<u>73.35</u>
<u>11:10</u>	<u>200</u>	<u>6.57</u>	<u>603</u>	<u>20.1</u>	<u>3.5</u>	<u>7.0</u>	<u>161.2</u>	<u>73.55</u>
<u>11:15</u>	<u>200</u>	<u>6.71</u>	<u>699</u>	<u>19.4</u>	<u>3.1</u>	<u>7.1</u>	<u>157.3</u>	<u>73.75</u>

FIELD INFORMATION FORM

Site Name: NE-100
 Site No.: Sample Point:
 No.: Sample ID:

This Waste Management Field Information Form is Required
 This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

Laboratory Use Only/Lab ID:

PURGE INFO
 PURGE DATE: 100323 PURGE TIME: 18:30 ELAPSED HRS:
 WATER VOL IN CASING: ACTUAL VOL PURGED: WELL VOLs PURGED:
(MM DD YY) (2400 Hr Clock) (hrs:min) (Gallons) (Gallons) (ft/msl)
Note: For Passive Sampling, replace "Water Vol in Casing" and "Well Vols Purged" w/ Water Vol in Tubing/Flow Cell and Tubing/Flow Cell Vols Purged. Mark changes, record field data, below.

PURGE/SAMPLE EQUIPMENT
 Purging and Sampling Equipment ... Dedicated: Y or Y Filter Device: Y or Y 0.45 μ or μ (circle or fill in)
 Purging Device: A A-Submersible Pump D-Bailer Filter Type: A-In-line Disposable C-Vacuum
 Sampling Device: A B-Peristaltic Pump E-Piston Pump B-Pressure X-Other:
 C-QED Bladder Pump F-Dipper/Bottle
 X-Other: Sample Tube Type: D A-Teflon C-PVC X-Other:
 B-Stainless Steel D-Polypropylene

WELL DATA
 Well Elevation (at TOC): (ft/msl) Depth to Water (DTW) (from TOC): 10185 (ft) Groundwater Elevation (site datum, from TOC): (ft/msl)
 Total Well Depth (from TOC): (ft) Stick Up (from ground elevation): (ft) Casing ID: 2 (in) Casing Material: PVC
Note: Total Well Depth, Stick Up, Casing Id, etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (umhos/cm @ 25 °C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)
18:35	250 1 st	6.78	265	17.8	225	7.8	875	1019
18:40	250 2 nd	6.80	260	16.2	927	8.0	940	1019

CASE NARRATIVE

Unless qualified or notated within the narrative below, all sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Stacy Kennedy
Project Manager

Project Comments

Method 8270, -01, -04, -05, -06, -09: 2-Picoline, a,a-Dimethylphenethylamine, p-Phenylenediamine, and 3,3-Dimethylbenzidine are reporting with critically low recovery in the laboratory control sample(s). These compounds are a method defined poor performer. Results are estimated.

The requested project specific reporting limits may be less than laboratory standard quantitation limits (PQL) but will be greater than or equal to the laboratory method detection limits (MDL). It is noted that results reported below lab standard quantitation limits (PQLs) may result in false positive/false negative values that may require additional laboratory quality assurance review, if requested. Routine laboratory procedures do not initiate a data review process for detections below the laboratory's PQL unless requested by the client.

Wet Chemistry by Method 9012B

The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Batch	Lab Sample ID	Analytes
WG2148826	(MS) R3984879-5, (MS) R3984879-7, (MSD) R3984879-6, (MSD) R3984879-8, L1664045-04	Cyanide

Metals (ICP) by Method 6010B

The sample concentration is too high to evaluate accurate spike recoveries.

Batch	Lab Sample ID	Analytes
WG2150984	(MS) R3986468-4, (MSD) R3986468-5	Manganese, Total Recoverable

Volatile Organic Compounds (GC/MS) by Method 8260B

The associated batch QC was above the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG2148782	(LCS) R3984893-1, L1664045-01, 04, 05, 09, 12	1,1,2-Trichloroethane and Dibromochloromethane

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2148115	(LCSD) R3985695-2, L1664045-07, 08, 10, 11	1,2-Dibromo-3-Chloropropane and 2-Butanone (MEK)

CASE NARRATIVE

Chlorinated Acid Herbicides (GC) by Method 8151

RPD between the primary and confirmatory analysis exceeded 40%

Batch	Lab Sample ID	Analytes
WG2145481	(LCS) R3984708-2	2,4,5-T
WG2145481	(LCSD) R3984708-3	2,4,5-T and 2,4-D

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2145481	(LCSD) R3984708-3, L1664045-01, 04	2,4,5-T, 2,4,5-Tp (Silvex) and 2,4-D

Polychlorinated Biphenyls (GC) by Method 8082

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2148878	(LCSD) R3986371-5, L1664045-05, 09	PCB 1016 and PCB 1260

Semi Volatile Organic Compounds (GC/MS) by Method 8270C

The associated batch QC was below the established quality control range for accuracy.

Batch	Lab Sample ID	Analytes
WG2148873	(LCS) R3987287-1, L1664045-01, 04, 05, 09	1,4-Naphthoquinone, 3,3-Dimethylbenzidine and p-Phenylenediamine

The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Batch	Lab Sample ID	Analytes
WG2148873	(MS) R3986579-3	Indeno(1,2,3-cd)pyrene

The associated batch QC was outside the established quality control range for precision.

Batch	Lab Sample ID	Analytes
WG2148873	(MSD) R3986579-4	2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2,4-Dimethylphenol, 2-Methylphenol, 4-Chloro-3-methylphenol and Hexachlorocyclopentadiene

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier Description

E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
P	RPD between the primary and confirmatory analysis exceeded 40%.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Suggested range for 3 consec. readings or note Permit/State requirements:
 pH: +/- 0.2
 Conductance: +/- 3%
 Temp: ---
 Turbidity: ---
 D.O.: +/- 10%
 eH/ORP: +/- 25 mV
 DTW: Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

FIELD DATA	SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (μ mhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: _____ Units
	<u>100523</u>	<u>6.34</u>	<u>868</u>	<u>18.8</u>	<u>31</u>	<u>0.8</u>	<u>-9.3</u>	

Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

Suggested range for 3 consec. readings or note Permit/State requirements: pH +/- 0.2, Conductance +/- 3%, Temp. --, Turbidity --, D.O. +/- 10%, eH/ORP +/- 25 mV, DTW Stabilize

Stabilization Data Fields are Optional (i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.

FIELD DATA
 SAMPLE DATE (MM DD YY): 10/06/23
 pH (std): 6.91
 CONDUCTANCE (umhos/cm @ 25°C): 746
 TEMP. (°C): 14.7
 TURBIDITY (ntu): 2.8
 DO (mg/L-ppm): 1.0
 eH/ORP (mV): 52.7
 Other:
 Units:

Final Field Readings are required (i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site).

Sample Appearance: Clear | Odor: None | Color: Clear | Other:
 Weather Conditions (required daily, or as conditions change): | Direction/Speed: | Outlook: | Precipitation: Y or N
 Specific Comments (including purge/well volume calculations if required):

FIELD COMMENTS

I certify that sampling procedures were in accordance with applicable EPA, State, and WM protocols (if more than one sampler, all should sign):

Date: 10/6/23 | Name: | Signature: | Company:

DISTRIBUTION: WHITE/ORIGINAL - Stays with Sample, YELLOW - Returned to Client
