November 2023

INTRODUCTION

This report contains the results of the statistical analyses used to evaluate the ground water data obtained during the second semi-annual monitoring event in 2023 at Eco Vista Sanitary Landfill. The ground water monitoring well network at Eco Vista Sanitary Landfill includes MW-1N, MW-2N, MW-3N, MW-7N, MW-8N, MW-10N, MW-11N, MW-15, MW-16, MW-17, MW-19, MW-20, MW-21, LGW-2, LGW-3R, LGW-4, LGW-5, LGW-6, LGW-7, LGW-8R, LGW-9, LGW-10, and LGW-14R. These monitoring wells were sampled during July 7-10, 2023 and analyzed for the parameters required by permit. Monitoring well MW-20 did not produce sufficient water to be collected. A resample event was conducted on October 2-6, 2023 where required.

The statistical plan is designed to detect a release from the facility at the earliest indication so that it is protective of human health and the environment. An intrawell methodology is described and then applied to the Eco Vista Sanitary Landfill data. The statistical plan conforms with USEPA Guidance document (“*Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Unified Guidance*”, March 2009), and the American Society for Testing and Materials (ASTM) standard D6312-98, *Developing Appropriate Statistical Approaches for Ground-Water Detection Monitoring Programs*.

Ground Water Monitoring Program

The groundwater monitoring network for Eco Vista Sanitary Landfill includes the twenty-three wells designated above. Each of the groundwater monitoring wells is to be sampled and analyzed for the detection monitoring parameters listed below.

Acetone	<i>trans</i> -1,4-Dichloro-2-butene	Iodomethane
Acrylonitrile	1,1-Dichloroethane	4-Methyl-2-pentanone
Benzene	1,2-Dichloroethane	Styrene
Bromochloromethane	1,1-Dichloroethene	1,1,1,2-Tetrachloroethane
Bromodichloromethane	<i>cis</i> -1,2-Dichloroethene	1,1,2,2-Tetrachloroethane
Bromoform	<i>trans</i> -1,2-Dichloroethene	Tetrachloroethene
Carbon disulfide	1,2-Dichloropropane	Toluene
Carbon tetrachloride	<i>cis</i> -1,3-Dichloropropene	1,1,1-Trichloroethane
Chlorobenzene	<i>trans</i> -1,3-Dichloropropene	1,1,2-Trichloroethane
Chloroethane	Ethylbenzene	Trichloroethene
Chloroform	2-Hexanone	Trichlorofluoromethane
Dibromochloromethane	Bromomethane	1,2,3-Trichloropropane
1,2-Dibromo-3-chloropropane	Chloromethane	Vinyl acetate
1,2-Dibromoethane	Dibromomethane	Vinyl chloride
1,2-Dichlorobenzene	Methylene chloride	Xylenes (Total)
1,4-Dichlorobenzene	2-Butanone	
Antimony, Total	Chromium, Total	Selenium, Total
Arsenic, Total	Cobalt, Total	Silver, Total
Barium, Total	Copper, Total	Thallium, Total
Beryllium, Total	Lead, Total	Vanadium, Total
Cadmium, Total	Nickel, Total	Zinc, Total
Chloride	Sulfate	pH
Iron	Total Dissolved Solids (TDS)	Specific Conductance
Manganese	Total Organic Carbon (TOC)	

The ground water data obtained during the second semi-annual monitoring event in 2023 are summarized in Attachment A.

STATISTICAL METHODOLOGIES FOR DETECTION MONITORING

The statistical guidance provides several options for statistically evaluating the ground water data at those wells that monitor the open cells or contiguous MSWLF units. The preferred methods for comparing inorganic ground water data are using either prediction limits or using control charts. An intrawell control chart method was applied to the Eco Vista Sanitary Landfill data using the DUMPStat[®] statistical program. DUMPStat[®] is a program for the statistical analysis of groundwater monitoring data using methods described in “Statistical Methods for Groundwater Monitoring” by Dr. Robert D. Gibbons. The DUMPStat program is completely consistent with all USEPA regulations and guidance and the ASTM D6312-98 guidance. Ground water statistics are to be done on all well-parameter pairs detected above the PQL, per the requirements of ADEQ Regulation 22.1203(h)(5). The organic constituents are compared to practical quantitation limits (PQLs), in lieu of statistical comparisons to historical concentrations.

Volatile Organic Compounds

Volatile Organic Compounds (VOCs) are generally man-made compounds not present in ambient ground water. If VOCs are initially detected above their statistical limit (i.e., the laboratory PQL or reporting limit), a verification resample will be collected. A statistical exceedance will be indicated if the VOC detection is confirmed.

VOCs detected in the ground water at Eco Vista Sanitary Landfill during the second semi-annual monitoring event in 2023 are summarized in the table below. Historical VOC detections are summarized in Attachment B.

VOCs detected at Eco Vista Sanitary Landfill during the second semi-annual monitoring event in 2023

Well	VOC Detected	Jul 2023 Result, $\mu\text{g/L}$	Oct 2023 Result, $\mu\text{g/L}$	Reporting Limit, $\mu\text{g/L}$	Verified/ Awaiting Verification	GWPS, $\mu\text{g/L}$
LGW-10	1,4-Dichlorobenzene	1.57	1.88	1	Verified	75

GWPS – Groundwater Protection Standard. Proposed in Document No. 65838 and approved in Document No. 65893.

The current verified VOC detections and those confirmed VOCs identified in the past eight sampling events were evaluated against the ground water protection standards (GWPS) using confidence limits (Attachment C). The 95% lower confidence limit (LCL) for the mean of the most recent eight rounds of data were used to evaluate whether the regulated unit is in compliance with the approved ground-water protection standards (e.g. whether the verified constituent is detected at a significant level above the GWPS). An exceedance is verified if the LCL is above the Regulatory GWPS. The calculated LCLs for historically detected VOCs are below the respective GWPS.

Intrawell statistics

Intrawell statistics are appropriate for facilities where the upgradient wells do not accurately characterize the natural ground water conditions downgradient from the facility. This may be due to different

hydrogeological conditions where the wells are screened, having too few upgradient wells to account for the spatial variability, or the site exhibiting no definable hydraulic gradient. Intrawell statistics compare new measurements to the historical data at each ground water monitoring well independently. It is recommended that at least eight background samples be obtained prior to performing the statistics.

The most useful technique for intrawell comparisons is the combined Shewhart-CUSUM control chart. This control chart procedure is useful because it will detect releases both in terms of the constituent concentration and cumulative increases. This method is also extremely sensitive to sudden and gradual releases. A requirement for constructing these control charts is that the parameter is detected at a frequency greater than or equal to 25%, otherwise the data variance is not properly defined.

The combined Shewhart-CUSUM control chart assumes that the data are independent and normally distributed with a fixed mean and a constant variance. Independent data is much more critical than the normality assumption. To achieve independence, it is recommended that data are collected no more frequently than quarterly to account for seasonal variation. The combined Shewhart-CUSUM control chart is extremely robust to deviations from normality. Because the control charts do not use a specific multiplier based on a normal distribution, it is more conservative to assume normality.

It is recommended that at least eight rounds of data be available to provide a reliable estimate of the mean and standard deviation of the parameter concentration, although the control charts will be generated with as few as four data points. Having only four data points may produce greater uncertainty in the mean and standard deviation of the background data, leading to higher control limits, thus having a potentially high false negative rate.

Many groundwater monitoring parameters are not detected at a frequency great enough to generate the combined Shewhart-CUSUM control charts. For constituents that are detected less than 25% of the time at a particular well, the data should be plotted as a time series until a sufficient number of data points are available to provide a 99% confidence nonparametric prediction limit. Thirteen independent measurements (with 1 resample) are necessary to achieve a 99% confidence (1% false positive rate) nonparametric prediction limit. Eight independent measurements (for pass 1 of 2 resamples) are necessary to achieve a 99% confidence nonparametric prediction limit. The nonparametric prediction limit is the largest determination out of the data set collected for that well and parameter. If the detection frequency is 0% after thirteen samples have been collected, the practical quantitation limit (PQL) becomes the nonparametric prediction limit.

In developing the statistical background, the historical data must be thoroughly screened for anomalous data due to sampling error, analytical error, or simply by chance alone. An erroneous data point, if not removed prior to the mean and variance computations, would yield a larger control limit thus increasing the false negative rate. The DUMPStat[®] program screens for outliers using the Dixon test. If the Dixon test indicates an outlier, the value is compared to three times the median value for intrawell analyses. If the value fails both criteria of the two-stage screening, the value is considered a statistical outlier and will not be used in the mean and variance determinations. Anomalous data will still be plotted on the graphs (with a unique symbol) but will not be included in the calculations. The verification resample plan is an integral function of the statistical plan to reduce the probability that anomalous data obtained after the background has been established, is indicative of a landfill release. The background data for each well and constituent is tested for existing trends using Sen's nonparametric estimate of trend. If contamination exists prior to

completing the background, the control limits could be potentially high and this control chart method would not be able to detect an increasing trend unless the increase is severe.

Results of the Intra-well Statistics

The trace metals and inorganic indicator data were evaluated using the combined Shewhart-CUSUM control chart method (Attachment D). The background used to determine control limits includes data obtained from January 2006 through 2016 for wells LGW-10, LGW-2, LGW-4, LGW-9, MW-10N, MW-11N, MW-1N, and MW-2N; July 2015 through June 2019 for well LGW-3R; January 2006 through 2015 for wells LGW-5, LGW-6, and LGW-7; January 2009 through 2016 for wells LGW-14R and LGW-8R; June 2015 through 2016 for wells MW-15, MW-16, MW-17, MW-19, MW-20, and MW-21; and 2000 through 2016 for wells MW-3N, MW-7N, and MW-8N. For the parameters evaluated, the statistical limit exceedances identified are summarized in the table below.

Summary of statistical limit exceedances during the second semi-annual monitoring period in 2023.

Well	Parameter	Result	CUSUM Value	Control limit	Control Limit Type	Verified/Awaiting Verification
LGW-14R	TDS, mg/L	305	379.4546	288.5801	Normal	Verified

	TOC, mg/L	2.62	--	1.8000	Nonparametric	Awaiting Verification
MW-8N	TOC, mg/L	2.50	3.4441	2.3038	Normal	Verified

A control chart factor was selected to provide a balance of the site-wide false positive and false negative rates. A statistical power curve indicates the expected false assessments for the site as a whole. The site-wide false positive rate is 9% and the test becomes sensitive to 3 standard deviation units over background.

Increasing trends detected in the background data include cobalt, iron, manganese, nickel, and TDS at LGW-10; pH at LGW-14R; pH at LGW-4; barium and zinc at LGW-7; pH at LGW-8R; zinc at LGW-9; sulfate at MW-16; sulfate at MW-17; zinc at MW-1N; barium at MW-2N; manganese, nickel, sulfate, and zinc at MW-3N; pH and sulfate at MW-7N; and pH and sulfate at MW-8N.

Monitoring wells exhibiting unverified exceedances were resampled during October 2-6, 2023. The results of the resample analysis statistics are summarized in the table below.

Summary of statistics for the resample monitoring event.

Well	Parameter	Result	CUSUM Value	Control limit	Control Limit Type	Comment
LGW-2	TOC, mg/L	2.23	--	1.0000	Nonparametric	Previous exceedance verified
LGW-4	TOC, mg/L	1.63	--	1.0500	Nonparametric	Previous exceedance verified
LGW-6	TOC, mg/L	<1	--	1.0000	Nonparametric	Previous exceedance not verified
LGW-7	Manganese, µg/L	25.8	120.8809	150.3006	Normal	Previous exceedance not verified
	TOC, mg/L	<1	--	1.0000	Nonparametric	Previous exceedance not verified

STATISTICAL METHODOLOGIES FOR ASSESSMENT MONITORING

Trace Metals and Inorganic Compounds

GWPS exceedances observed during the second semi-annual monitoring in 2023 include cadmium at LGW-9, cadmium at MW-3N, cadmium at MW-8N, cobalt at LGW-10, cobalt at LGW-5, cobalt at LGW-6, and cobalt at MW-21. The current verified control limit/prediction limit exceedances and GWPS exceedances were evaluated against the approved GWPS using confidence limits (Attachment E). The 95% lower confidence limit (LCL) for the mean of the data was used to evaluate whether the regulated unit is in compliance with the groundwater protection standards (e.g. whether the verified constituent is detected at a significant level above the GWPS). An exceedance is verified if the LCL is above the GWPS.

The 95% LCL (42.629 µg/L) for cobalt at LGW-10 exceeds the GWPS of 6 µg/L.

The 95% LCL (6.232 µg/L) for cobalt at LGW-5 exceeds the GWPS of 6 µg/L.

The 95% LCL (20.232 µg/L) for cobalt at LGW-6 exceeds the GWPS of 6 µg/L.

The 95% LCL (10.167 µg/L) for cobalt at MW-21 exceeds the GWPS of 6 µg/L.

The 95% LCL (13.125 µg/L) for cadmium at LGW-9 exceeds the GWPS of 5 µg/L.

The 95% LCL (14.841 µg/L) for cadmium at MW-3N exceeds the GWPS of 5 µg/L.

The 95% LCL (7.182 µg/L) for cadmium at MW-8N exceeds the GWPS of 5 µg/L.

N(back) and N(mon) = Non-outlier measurements in the background and monitoring periods.

N(tot) = All independent measurements for that constituent and well.

For transformed data, mean and SD in transformed units and control limit in original units.

Conf = confidence level for passing initial test or one of two verification resamples (nonparametric test only).

* - Insufficient Data.

** - Detection Frequency < 25%.

*** - Zero Variance.

Table 4

**Dixon's Test Outliers
1% Significance Level**

Constituent	Units	Well	Date	Result	ND Qualifier	Date Range	N	Critical Value
Iron, total	ug/L	LGW-4	10/26/2006	1400.0000		01/24/2006-07/19/2016	24	0.4969

N = Total number of independent measurements in background at each well.

Date Range = Dates of the first and last measurements included in background at each well.

Critical Value depends on the significance level and on N-1 when the two most extreme values are tested or N for the most extreme value.

N(back) and N(mon) = Non-outlier measurements in the background and monitoring periods.

N(tot) = All independent measurements for that constituent and well.

For transformed data, mean and SD in transformed units and control limit in original units.

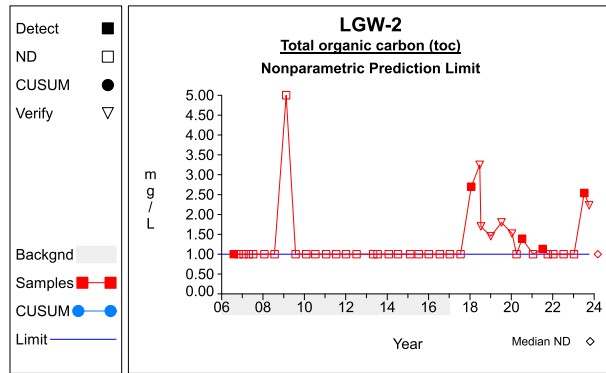

Conf = confidence level for passing initial test or one of two verification resamples (nonparametric test only).

* - Insufficient Data.

** - Detection Frequency < 25%.

*** - Zero Variance.
