Subject: Buffalo National River

This national treasure is being threatened by the presence of an industrial farm of over 6,000 hogs sited near a major tributary of the Buffalo, and bordering a small town and school whose residents' and students' health is adversely affected as they are exposed to noxious fumes. Run-off from this same operation will cause irreversible damage to the aquatic life in the river.

Please show the people of this state and this nation that government can act wisely and in the name of the common good by protecting this river and surrounding environs from the deep harm caused by this operation and others like it.
