Subject: RE: Regulations 5 and 6

To Doug Szenher,

This is in reference to the July 1st meeting of the ADEQ for the regulations 5 and 6 which will ban new medium and large-size CAFO's in the Buffalo River Watershed.

The thing that most upsets me about the possibility of putting medium and large CAFO's in the watershed is the porous ground. Not only will the Buffalo River be affected but groundwater, wells, and springs. Not only will a river be a risk but people and their quality of living.

I realize that farmers try to do their best about the keeping environment clean but there are other areas of the state that would be more suitable for such endeavors.

The horror stories are out there in other states with farmers that were trying to do the right thing but it didn't always work.

I don't think we need to risk that for the Buffalo River Watershed.

Thank you for your attention,

Pat McKeown
