Your connection to Arkansas waters	I am a landowner in Carroll County, not on a river but between the Osage creek and the Kings River. I have a private well. I am a board member of the Kings River Watershed Partnership. I swim and kayak on the Kings River and The Buffalo River whenever I can. I feel like this proposed change in regulations will compromise water quality. This is too high a price to pay. There is clean water in our part of this state and I don't understand how any program that endangers this could be approved. Also it seems like this new change isn't defined well enough to be approved at this time. I am opposed to this change.
Are you a private landowner that could qualify for non-point source nutrient reduction credits?	No
Do you trust in ADEQ's ability to critically review applications for credit-generating projects to determine if proposed offsets will result in significant adverse effects to water quality?	No. All details outlining how credits will be calculated, administered, monitored, enforced, and how credit ratios will be determined should be open for full public participation.
Do you believe adequate consideration should be given to the impact on ADEQ and ANRC resources and staff, and how these costs will be covered, BEFORE approving a nutrient trading regulation?	Yes
Without objective criteria, do you believe ADEQ or ANRC will develop sufficient monitoring protocols to determine whether projects are resulting in an "unacceptable localized adverse effect	No

on water quality?"

**Comments on
Regulation 37**

I OPPOSE Regulation 37 as written.
