Affiliation (if applicable)	Buffalo River Watershed Alliance; White River Waterkeeper; Nature Conservancy
Your connection to Arkansas waters	I am an Arkansas Landowner in Newton County since 1980. I swim and have fished in the the Buffalo National River, the Little Buffalo River, the White River and Bull Shoals Lake. My Drinking Water comes from Bull Shoals Lake. I have seen overgrowth of algae in (mostly) the two Buffalo Rivers, and there were times I would not (could not!) go in the water! I'm concerned about motor traffic on the Lake because of the gasoline/diesel contamination of our Drinking Water, with few other Water sources available. I'm concerned about the Raw Sewage contamination of Big Creek and the Buffalo National River because of the factory-sized "farm" questionably licensed to operate before they had secure environmental checks in place.
Are you a private landowner that could qualify for non-point source nutrient reduction credits?	I do not live in an urban area, but Do practice water-conservation on the property by catching Rain Water for watering plants and Not Using chemical fertilizers for lawn care.
Do you trust in ADEQ's ability to critically review applications for credit-generating projects to determine if proposed offsets will result in significant adverse effects to water quality?	I believe that ADEQ has the capability, but not sure whether the passage of Regulation 37 will permit them to make the crucial decisions.
Do you believe adequate consideration should be given to the impact on ADEQ and ANRC resources and staff, and how these costs will be covered, BEFORE approving a nutrient trading regulation?	No
Without objective criteria, do you believe ADEQ or ANRC will develop sufficient	I only have the Big Creek valley (in Newton County)

monitoring protocols to determine whether projects are resulting in an "unacceptable localized adverse effect on water quality?"

contamination from the hog CAFO to base my beliefs on, and I STILL OBJECT to the spreading of NON-treated RAW SEWAGE that is allowed to continue there!

Comments on Regulation 37

I OPPOSE Regulation 37 as written.

Concerns

As Arkansas grows in population (and it will ~ because of recreational opportunities, for one), I'm Very Concerned about limited regulations that will ultimately determine the Health of the People of Arkansas!. I see a lot of "good ol' boy" rules surfacing so that those who are affecting the Environment can AVOID being Responsible to the very People they ultimately Serve.

Additional comments

ADEQ is needed and wanted. I hope that they will be able to carry out their mission and duties in the good Faith and Trust with which (I'm Sure) they were created.
