Subject: Protect the Buffalo National River

Dear Mr. Szenher,

Please continue your work on protecting the Buffalo National River. The Buffalo river is a pristine and treasured area of our state. It is now at risk of contamination from

multiple sources including leakage from waste holding ponds, run-off, and flooding.

A catastrophic failure of a hog waste pond would create irreversible damage to the aquatic life of the Buffalo and downstream in the White River.

Please don't let that happen to one of our states most beautiful areas, one that brings in people from all over the US. People who spend money in our state.

Sincerely,

Jennifer Steck
