Subject: Regulations #5 & #6

I strongly support the amendments 5 & 6 of the Arkansas Pollution Control & Ecology Commission Regulations so that further CAFO introduction in the Buffalo River watershed will be outlawed. It makes economic sense to protect the tourism that has flourished for years in this area; the karst topography is too vulnerable to pollution from these operations to risk even more of it. A recreational river must have high quality water.

I'm also concerned about health threats to the public from water & air borne pathogens, as well as environmental degradation associated with these farms.

Sincerely,

Nancy Owens
