Subject: Comments to Proposed Changes to Regulation 2

I support comments provided by the Buffalo River Watershed Alliance on proposed changes to Regulation 2, and provide the following specific comments:

2.203

Regulatory authority over practices employed on private land that lead to degradation of Extraordinary Resource Waters should be exercised to protect these waters for use by all Arkansans.

2.509

Lack of measurable quantitative criteria for nutrients that result in an impairment will lead to regulatory uncertainty. Specific values for phosphorous and nitrogen should be included in the rule.

Thank you.
