Arkansas Pollution Control and Ecology Commission  
Rule 2, As Amended

**Rule Establishing  
Water Quality Standards for Surface Waters  
of the State of Arkansas**

**TABLE OF CONTENTS**

CHAPTER 1: AUTHORITY, GENERAL PRINCIPLES, AND COVERAGE .....	1-1
Rule 2.101 Authority .....	1-1
Rule 2.102 Purpose .....	1-1
Rule 2.103 Commission Review .....	1-1
Rule 2.104 Policy for Compliance.....	1-2
Rule 2.105 Environmental Improvement Projects.....	1-2
Rule 2.106 Definitions.....	1-2
CHAPTER 2: ANTIDegradation Policy .....	2-1
Rule 2.201 Existing Uses .....	2-1
Rule 2.202 High Quality Waters.....	2-1
Rule 2.203 Outstanding Resource Waters .....	2-1
Rule 2.204 Thermal Discharges.....	2-1
CHAPTER 3: WATERBODY USES.....	3-2
Rule 2.301 Introduction .....	3-2
Rule 2.302 Designated Uses .....	3-2
Rule 2.303 Use Attainability Analysis .....	3-6
Rule 2.304 Physical Alteration of Habitat .....	3-7
Rule 2.305 Short Term Activity Authorization .....	3-7
Rule 2.306 Procedures for Removal of Any Designated Use Except Fishable/Swimmable, Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway, and Modification of Water Quality Criteria not Related to These Uses .....	3-8
Rule 2.307 Use Subcategories .....	3-9
Rule 2.308 Site Specific Criteria .....	3-9
Rule 2.309 Water Quality Standards Temporary Variance .....	3-9
Rule 2.310 Procedure for the Removal of the Designated Use of Extraordinary Resource Water, or Ecologically Sensitive Waterbody, or Natural and Scenic Waterway for the Purpose of Constructing a Reservoir on a Free Flowing Waterbody to Provide a Domestic Water Supply. .	3-9
Rule 2.311 Procedure for the Addition of the Designated Use of Extraordinary Resource Water, or Ecologically Sensitive Waterbody, or Natural and Scenic Waterway to a Waterbody or Segment of a Waterbody. .	3-11
CHAPTER 4: GENERAL STANDARDS.....	3-1
Rule 2.401 Applicability.....	3-1
Rule 2.402 Nuisance Species.....	3-1
Rule 2.403 Methods.....	3-1

Rule 2.404	Mixing Zones .....	3-1
Rule 2.405	Biological Integrity .....	3-2
Rule 2.406	Color .....	3-2
Rule 2.407	Taste and Odor .....	3-2
Rule 2.408	Solids, Floating Material and Deposits .....	3-2
Rule 2.409	Toxic Substances .....	3-3
Rule 2.410	Oil and Grease .....	3-3
CHAPTER 5: SPECIFIC STANDARDS .....		4-1
Rule 2.501	Applicability .....	4-1
Rule 2.502	Temperature .....	4-1
Rule 2.503	Turbidity .....	4-2
Rule 2.504	pH .....	4-2

**ARKANSAS  
POLLUTION CONTROL  
AND ECOLOGY COMMISSION**

---

Rule 2, As Amended

**Rule Establishing  
Water Quality Standards for Surface Waters  
of the State of Arkansas**

**CHAPTER 1: AUTHORITY, GENERAL PRINCIPLES, AND COVERAGE**

**Rule 2.101      Authority**

Pursuant to the Arkansas Water and Air Pollution Control Act, (Ark. Code Ann. § 8-4-101 *et seq.*), and in compliance with the requirements of the Federal Water Pollution Control Act, 33 U.S.C. § 1251 *et seq.*, (hereinafter “Clean Water Act”), the Arkansas Pollution Control and Ecology Commission (hereinafter “Commission”) hereby promulgates this rule establishing water quality standards for all surface waters, interstate and intrastate, of the State of Arkansas.

**Rule 2.102      Purpose**

The water quality standards herein set forth are based upon present, future and potential uses of the surface waters of the State and criteria developed from statistical evaluations of past water quality conditions and a comprehensive study of least-disturbed, ecoregion reference streams. The standards are designed to enhance the quality, value, and beneficial uses of the water resources of the State of Arkansas, to aid in the prevention, control and abatement of water pollution, to provide for the protection and propagation of fish and wildlife and to provide for recreation in and on the water. In establishing these standards, the Commission has taken into consideration the use and value of the streams for public water supplies, commercial, industrial and agricultural uses, aesthetics, recreational purposes, propagation of fish and wildlife, other beneficial uses, and views expressed at public hearings. The State of Arkansas has an exceptionally large volume of high quality water. With few exceptions the streams and lakes of Arkansas contain waters of a quality suitable for all legitimate uses without the necessity of unreasonable water treatment. Where man-made pollution exists, substantial progress has been made in abatement. It is the purpose of these rules to preserve and protect the quality of this water so that it shall be reasonably available for all beneficial uses and thus promote the social welfare and economic well-being of the people of the State. It is further the purpose of these rules to designate the uses for which the various waters of the State shall be maintained and protected; to prescribe the water quality standards required to sustain the designated uses; and to prescribe rules necessary for implementing, achieving and maintaining the prescribed water quality.

**Rule 2.103      Commission Review**

The water quality standards herein established will be reviewed by the Commission at least once each three-year period beginning as of October 18, 1972. Revisions may be made to take into

account changing technology of waste production, treatment and removal, advances in knowledge of water quality requirements, and other relevant factors.

#### **Rule 2.104 Policy for Compliance**

It shall be the policy of the Arkansas Department of Energy and Environment, Division of Environmental Quality (hereinafter “Division”) to provide, on a case-by-case basis, a reasonable time for an existing permittee to comply with new or revised water quality based effluent limits. Consequently, compliance schedules may be included in National Pollutant Discharge Elimination System (NPDES) permits at the time of renewal or permit modification initiated by the Division to require compliance with new water quality standards. Compliance must occur at the earliest practicable time, in accordance with 40 C.F.R. §122.47.

#### **Rule 2.105 Environmental Improvement Projects**

The Commission may, after consideration of information provided pursuant to Appendix B and Ark. Code Ann. § 8-5-901 *et seq.*, grant temporary modifications to the General and Specific Standards or establish a subcategory(ies) of use(s) for completion of long-term Environmental Improvement Projects.

#### **Rule 2.106 Definitions**

**304(a) Guidance:** Refers to Section 304(a) of the Clean Water Act, 33 U.S.C. § 1314(a), which requires the United States Environmental Protection Agency to publish and periodically update ambient water quality criteria which will be protective of human health and the environment.

**Abatement:** The reduction in degree or intensity of pollution.

**Acute toxicity:** A statistically significant difference (at the 95 percent confidence level) in mortality or immobilization between test organisms and a control measured during a specified period of time which is normally less than 96 hours.

**Algae:** Simple plants (without roots, stems, or leaves) that contain chlorophyll and are capable of photosynthesis.

**Aquatic biota:** All those life forms which inhabit the aquatic environment.

**Aquatic life:** The designated use of a waterbody determined by the fish community and other associated aquatic biota.

**Base flows:** That portion of the stream discharge that is derived from natural storage (i.e., outflow from groundwater or swamps), or sources other than recent rainfall that creates surface runoff. Also called sustaining, normal, dry weather, ordinary, or groundwater flow.

**Bioaccumulation:** The process by which a compound is taken up by an aquatic organism, both from water and through food.

**Chronic toxicity:** A statistically significant difference (at the 95 percent confidence level) in mortality or immobilization, reduced reproduction or limited growth between test organisms and a control measured during a substantial segment of the life span of the test organism.

**Commission:** The Arkansas Pollution Control and Ecology Commission.

**Conventional pollutants:** Pursuant to section 304(a)(4) of the Clean Water Act, 33 U.S.C. § 1314(a)(4), includes biochemical oxygen demand (BOD), total suspended solids (nonfilterable) (TSS), pH, fecal coliform, and oil and grease.

**Criterion continuous concentration (CCC):** An estimate of the highest concentration of a material in ambient water to which an aquatic community can be *exposed indefinitely* without resulting in an unacceptable adverse effect. This is the chronic criterion.

**Criterion maximum concentration (CMC):** An estimate of the highest concentration of a material in ambient water to which an aquatic community can be *exposed briefly* without resulting in an unacceptable adverse effect. This is the acute criterion.

**Critical flows:** The flow volume used as background dilution flows in calculating concentrations of pollutants from permitted discharges. These flows may be adjusted for mixing zones. The following critical flows are applicable:

For a seasonal aquatic life - 1 cubic foot per second minus the design flow of any point source discharge (may not be less than zero);

For human health - harmonic mean flow or long term average flow;

For minerals - harmonic mean flow, except as follows:

- Rule 2.511(A) Site Specific Mineral Criteria listed with an asterisk- 4 cubic feet per second.
- Rule 2.511 (C) Domestic Water Supply: Q7-10; and

For metals and conventional pollutants - Q7-10.

**Critical season:** That period of the year when water temperatures exceed 22°C. This is normally the hot, dry season and after the majority of the fish spawning activities have ceased. This season occurs during a different time frame in different parts of the state, but normally exists from about mid-May to mid-September.

**Cumulative:** Increasing by successive additions.

**Degradation:** The act or process of causing any decrease in quality.

**Design flow:** A facility discharge flow of process wastewater that is authorized in a NPDES permit.

**Designated uses:** Those uses specified in the water quality standards for each waterbody or stream segment whether or not they are being attained.

**Discharge:** A discrete point source of waste or wastewater entering into waters of the State.

**Dissolved oxygen (DO):** A measure of the concentration of oxygen in solution in a liquid.

**Division:** The Arkansas Department of Energy and Environment, Division of Environmental Quality or its successor.

**Ecoregion:** A large area of landscape with relatively homogenous physical, chemical and biological characteristics.

**Effluent:** Water that is not reused after flowing out of any wastewater treatment facility or other works used for the purpose of treating, stabilizing, or holding wastes.

**Escherichia coli:** A rod shaped gram negative bacillus (0.5 – 3-5 microns) abundant in the large intestines of mammals.

**Endemic:** Native to and confined to a specific region.

**Existing uses:** Those uses listed in Section 303(c)(2) of the Clean Water Act, 33 U.S.C. § 1313(c)(2) (i.e., public water supplies, propagation of fish and wildlife, recreational uses, agricultural and industrial water supplies, and navigation), which were actually attained in the waterbody on or after November 28, 1975, whether or not they are included in the water quality standards.

**Fecal coliform bacteria:** Gram-negative nonspore-forming rods that ferment lactose in  $24 \pm 2$  hours at  $44.5 \pm 0.2$  °C with the production of gas in a multiple-tube procedure or produce acidity with blue colonies in a membrane filter procedure. For the purpose of this rule, the genus *Klebsiella* is not included in this definition.

**Fishable/swimmable:** Refers to one of the national goals stated in Section 101(a)(2) of the Clean Water Act, 33 U.S.C. § 1251(a)(2) ,“...provides for the protection and propagation of fish, shellfish and wildlife and provides for recreation in and on the water.”

**Groundwater:** Water below the land surface in a zone of saturation.

**Hardness:** A measure of the sum of multivalent metallic cations expressed as calcium carbonate ( $\text{CaCO}_3$ ).

**Harmonic mean flow:** The reciprocal of the mean of the reciprocals of daily flow measurements.

**Headwater:** The upper watershed area where streams generally begin; typically consists of 1st- and 2nd-order streams.

**Heavy metals:** A general name given to the ions of metallic elements heavier than iron, such as cadmium, lead, mercury, copper, zinc and chromium.

**Human health criteria:** Levels of toxicants in ambient water which will not manifest adverse health effects in humans.

**Hypolimnion:** That portion of a thermally stratified lake or reservoir below the zone in which the rate of temperature change is greatest. An area of minimal circulation and mixing.

**Impairment:** Exceedances of the water quality standards by a frequency and/or magnitude which results in any designated use of a waterbody to fail to be met as a result of physical, chemical or biological conditions.

**Indicator species:** Species of fish which may not be dominant within a species group and may not be limited to one area of the state, but which, because of their presence, are readily associated with a specific ecoregion. All indicator species need not be present to establish a normal or representative fishery.

**Indigenous:** Produced, growing or living naturally in a particular region or environment.

**Interstate:** Of, connecting, or existing between two or more states.

**Intrastate:** Existing or occurring within a state.

**Ionizing radiation:** Gamma rays and x-rays; alpha and beta particles, high speed electrons, neutrons, protons and other nuclear particles; but not sound or radio waves, or visible, infrared or ultraviolet light.

**Key species:** Fishes which are normally the dominant species (except for some ubiquitous species) within the important groups such as fish families or trophic feeding levels. All specified key species need not be present to establish a normal or representative fishery.

**Long term average flow:** An average annual stream flow based on a period of record which reflects the typical annual variability.

**Milligrams per liter (mg/L):** The concentration at which one milligram is contained in a volume of one liter; one milligram per liter is equivalent to one part per million (ppm) at unit density.

**Mixing zone:** An area where an effluent discharge undergoes mixing with the receiving waterbody. For toxic discharges a zone of initial dilution may be allowed within the mixing zone.

**Mouth:** The point of confluence where a stream enters a larger body of water.

**Natural background:** Ambient conditions or concentrations of a parameter due to non-anthropogenic sources; natural background does not typically interfere with support of designated uses nor the level of aquatic biota expected to occur naturally at the site.

**Naturally occurring excursions:** Temporary deviation from natural background due to natural events such as severe storm events, drought, temperature extremes, etc.

**Nephelometric turbidity unit (NTU):** A measure of turbidity based upon a comparison of the intensity of light scattered by a sample of water under defined conditions with the intensity of light scattered by a standard reference suspension; NTU are considered comparable to the previously reported Jackson Turbidity Units (JTU). May also be reported as Formazin Turbidity Units (FTU) in equivalent units.

**Nonpoint source:** A contributing factor to water pollution that is not confined to an end-of-the-pipe discharge, i.e., stormwater runoff not regulated under Clean Water Act § 402(p)(1), 33 U.S.C. § 1342(p), agricultural or silvicultural runoff, irrigation return flows, etc.

**Nuisance species:** Those organisms capable of interfering with the beneficial use of water.

**Nutrient:** Any substance assimilated by an organism which promotes growth and replacement of cellular constituents. The usual nutrient components of water pollution are nitrogen, phosphorus and carbon.

**Objectionable algal densities:** Numbers of total algae which would interfere with a beneficial use.

**Persistent:** Degraded only slowly by the environment.

**pH:** The negative logarithm of the effective hydrogen-ion concentration in gram equivalents per liter.

**Picocurie:** One trillionth ( $10^{-13}$ ) of a curie which is a unit of quantity of any radioactive nuclide in which  $3.7 \times 10^{10}$  disintegrations occur per second.

**Point source:** A discharge from a discrete point.

**Primary season:** That period of the year when water temperatures are 22°C or below. This includes the major part of the year from fall through spring, including the spawning season of most fishes. It normally occurs from about mid-September to mid-May.

**Q7-10:** A flow volume equal to or less than the lowest mean discharge during 7 consecutive days of a year which, on the average, occurs once every 10 years.

**Regulated-flow stream:** Those streams restricted by structures which have the ability to control stream flow.

**Seasonal aquatic life:** The designated aquatic life use that occurs in some waterbodies only during the period when stream flows increase substantially and water temperatures are cooler. This is normally during the months of December through May.

**State of Arkansas Continuing Planning Process:** A document setting forth the principal procedures of the State's water quality management programs, developed pursuant to Section

303(e) of the Clean Water Act, 33 U.S.C. § 1313(e), and 40 C.F.R. § 130.5. The CPP is not a rule.

**Storm flows:** Takes into account all flows and data collected throughout the year, including elevated flows due to rainfall events.

**Surface water:** That water contained on the exterior or upper portion of the earth's surface as opposed to groundwater.

**Synergism:** Cooperative action of discrete agents such that the total effect is greater than the sum of the effects taken independently.

**Total dissolved solids (TDS):** The total soluble organic and inorganic material contained in water; includes those materials, both liquid and solid, in solution and otherwise, which pass through a standard glass fiber filter disk and are not volatilized during drying at 180 °C.

**Trout fishery:** Water that is suitable for the growth and survival of trout, usually characterized as high quality water having a maximum summer temperature of 68°F or less.

**Use attainability analysis:** A structured scientific assessment of the factors affecting the attainment of the fishable/swimmable use which may include physical, chemical, biological and economic factors.

**Waterbodies, waterways, waters:** In this document, refers to surface waters of the State as described in Act 472.

**Water effects ratio (WER):** A specific pollutant's acute or chronic value measured from a specific site ambient water, divided by the respective acute or chronic toxicity of the same pollutant in laboratory water.

**Zone of initial dilution (ZID):** An area within the mixing zone where a toxic effluent discharge initiates mixing in the receiving waterbody. This is an area where acute water quality criteria may be exceeded, but acute toxicity may not occur.

## **CHAPTER 2: ANTIDEGRADATION POLICY**

### **Rule 2.201 Existing Uses**

Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.

### **Rule 2.202 High Quality Waters**

Where the quality of the waters exceeds levels necessary to support propagation of fish, shellfish and wildlife and recreation in and on the water, that quality shall be maintained and protected unless the State finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the State of Arkansas's Continuing Planning Process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. In allowing such degradation or lower water quality, the State shall assure water quality adequate to protect existing uses fully. Further, the State shall assure that (1) there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and (2) that the provisions of the Arkansas Water Quality Management Plan be implemented with regard to nonpoint sources.

### **Rule 2.203 Outstanding Resource Waters**

Where high quality waters constitute an outstanding state or national resource, such as those waters designated as Extraordinary Resource Waters, Ecologically Sensitive Waterbodies or Natural and Scenic Waterways, those uses and water quality for which the outstanding waterbody was designated shall be protected by (1) water quality controls, (2) maintenance of natural flow regime, (3) protection of instream habitat, and (4) encouragement of land management practices protective of the watershed. It is not the intent of the Extraordinary Resource Waters (ERW) designated use definition to imply that ERW status dictates regulatory authority over private land within the watershed, other than what exists under local, state, or federal law. The Arkansas Natural Resources Commission has responsibility for the regulation of the withdrawal of water from streams and reservoirs, and such withdrawals are not within the jurisdiction of this rule.

### **Rule 2.204 Thermal Discharges**

In those cases where potential water quality impairment associated with a thermal discharge is involved, the antidegradation policy and implementing method shall be consistent with Section 316 of the Clean Water Act, 33 U.S.C. § 1326.

## CHAPTER 3: WATERBODY USES

### Rule 2.301 Introduction

Substantially all the waters of the State have been designated for specific uses as shown in Appendix A. In those instances where waters are classified for multiple uses and different criteria are specified for each use, the criteria to protect the most sensitive use shall be applicable.

### Rule 2.302 Designated Uses

The designated uses are defined as follows:

- (A) Extraordinary Resource Waters - This beneficial use is a combination of the chemical, physical and biological characteristics of a waterbody and its watershed that is characterized by scenic beauty, aesthetics, scientific values, broad scope recreation potential and intangible social values. (For specific listings, refer to Appendices A and D)
- (B) Ecologically Sensitive Waterbody - This beneficial use identifies segments known to provide habitat within the existing range of threatened, endangered or endemic species of aquatic or semi-aquatic life forms. (For specific listings, refer to Appendices A and D)
- (C) Natural and Scenic Waterways - This beneficial use identifies segments that have been legislatively adopted into a state or federal system. (For specific listings, refer to Appendices A and D)
- (D) Primary Contact Recreation - This beneficial use designates waters where full body contact is involved. Any streams with watersheds of greater than 10 mi<sup>2</sup> are designated for full body contact. All streams with watersheds less than 10 mi<sup>2</sup> may be designated for primary contact recreation after site verification.
- (E) Secondary Contact Recreation - This beneficial use designates waters where secondary activities like boating, fishing or wading are involved.
- (F) Aquatic Life - This beneficial use provides for the protection and propagation of fish, shellfish and other forms of aquatic biota. It is further subdivided into the following subcategories:
  - (1) Trout Waters- Water that is suitable for the growth and survival of trout (Family: Salmonidae).
  - (2) Lakes and Reservoirs - Water that is suitable for the protection and propagation of fish and other forms of aquatic biota adapted to impounded waters. Generally characterized by a dominance of sunfishes such as bluegill or similar species, black basses and crappie. May include substantial

populations of catfishes such as channel, blue and flathead catfish and commercial fishes including carp, buffalo and suckers. Forage fishes are normally shad or various species of minnows. Unique populations of walleye, striped bass and/or trout may also exist.

- (3) Streams - Water that is suitable for the protection and propagation of fish and other forms of aquatic biota adapted to flowing water systems whether or not the flow is perennial.

- (a) Ozark Highlands Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by a preponderance of sensitive species and normally dominated by a diverse minnow community followed by sunfishes and darters. The community may be generally characterized by the following fishes:

<b>Key Species</b>	<b>Indicator Species</b>
Dusky stripe, Bleeding or Cardinal shiner	Banded sculpin
Northern hogsucker	Ozark madtom
Slender madtom	Southern redbelly dace
"Rock" basses	Whitetail shiner
Rainbow and/or Orangethroat darters	Ozark minnow
Smallmouth bass	

- (b) Boston Mountains Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by a major proportion of sensitive species; a diverse, often darter-dominated community exists but with nearly equal proportions of minnows and sunfishes. The community may be generally characterized by the following fishes:

<b>Key Species</b>	<b>Indicator Species</b>
Bigeye shiner	Shadow bass
Black redhorse	Wedgespot shiner
Slender madtom	Longnose darter
Longear sunfish	Fantail darter
Greenside darter	
Smallmouth bass	

- (c) Arkansas River Valley Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by a substantial proportion of sensitive species; a sunfish- and minnow-dominated

community exists but with substantial proportions of darters and catfishes (particularly madtoms). The community may be generally characterized by the following fishes:

**Key Species**

Bluntnose minnow  
Golden redhorse  
Yellow bullhead  
Longear sunfish  
Redfin darter  
Spotted bass

**Indicator Species**

Orangespotted sunfish  
Blackside darter  
Madtoms

- (d) Ouachita Mountains Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. The fish community is characterized by a major proportion of sensitive species; a minnow-sunfish-dominated community exists, followed by darters. The community may be generally characterized by the following fishes:

**Key Species**

Bigeye shiner  
Northern hogsucker  
Freckled madtom  
Longear sunfish  
Orangebelly darter  
Smallmouth bass

**Indicator Species**

Shadow bass  
Gravel chub  
Northern studfish  
Striped shiner

- (e) Typical Gulf Coastal Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by a limited proportion of sensitive species; sunfishes are distinctly dominant followed by darters and minnows. The community may be generally characterized by the following fishes:

**Key Species**

Redfin shiner  
Spotted sucker  
Yellow bullhead  
Warmouth  
Slough darter  
Redfin pickerel

**Indicator Species**

Pirate perch  
Flier  
Spotted sunfish  
Dusky darter  
Creek chubsucker  
Banded pygmy sunfish

- (f) Springwater-influenced Gulf Coastal Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by a

substantial proportion of sensitive species; sunfishes normally dominate the community and are followed by darters and minnows. The community may be generally characterized by the following fishes:

**Key Species**

Redfin shiner  
Blacktail redhorse  
Freckled madtom  
Longear sunfish  
Creole darter  
Redfin pickerel

**Indicator Species**

Pirate perch  
Golden redhorse  
Spotted bass  
Scaly sand darter  
Striped shiner  
Banded pygmy sunfish

- (g) Least-altered Delta Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by an insignificant proportion of sensitive species; sunfishes are distinctly dominant followed by minnows. The community may be generally characterized by the following fishes:

**Key Species**

Ribbon shiner  
Smallmouth buffalo  
Yellow bullhead  
Bluegill  
Bluntnose darter  
Largemouth bass

**Indicator Species**

Pugnose minnow  
Mosquitofish  
Pirate perch  
Tadpole madtom  
Banded pygmy sunfish

- (h) Channel-altered Delta Ecoregion - Streams supporting diverse communities of indigenous or adapted species of fish and other forms of aquatic biota. Fish communities are characterized by an absence of sensitive species; sunfishes and minnows dominate the population followed by catfishes. The community may be generally characterized by the following fishes:

**Key Species**

Blacktail shiner  
Drum  
Carp  
Channel catfish  
Green sunfish  
Spotted gar

**Indicator Species**

Mosquitofish  
Gizzard shad  
Emerald shiner

- (G) Domestic Water Supply - This beneficial use designates water that will be protected for use in public and private water supplies. Conditioning or treatment may be necessary prior to use.

- (H) Industrial Water Supply - This beneficial use designates water that will be protected for use as process or cooling water. Quality criteria may vary with the specific type of process involved and the water supply may require prior treatment or conditioning.
- (I) Agricultural Water Supply - This beneficial use designates waters that will be protected for irrigation of crops and/or consumption by livestock.
- (J) Other Uses - This category of beneficial use is generally used to designate uses not dependent upon water quality, such as hydroelectric power generation and navigation.

**Rule 2.303      Use Attainability Analysis**

- (A) A use attainability analysis must be conducted to justify the following conditions:
  - (1) Removing a fishable/swimmable designated use, which is not an existing use, from a waterbody; or
  - (2) To identify a subcategory of a fishable/swimmable use that requires less stringent criteria.
- (B) In order to remove a designated fishable/swimmable use, which is not an existing use, or identify subcategories of a fishable/swimmable use that require less stringent criteria, it must be demonstrated that the designated use is not attainable because:
  - (1) naturally occurring pollutant concentrations prevent the attainment of the use; or
  - (2) natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating State water conservation requirements to enable uses to be met; or
  - (3) human caused conditions or sources of pollution prevent attainment of the use and cannot be remedied or would cause more environmental damage to correct than leave in place; or
  - (4) dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use; or
  - (5) physical conditions related to the natural features of a water body, such as lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses; or

- (6) controls more stringent than those required by Section 301(b) and 306 of the Clean Water Act would result in substantial and widespread economic and social impact.

The scope of a use attainability analysis shall be in direct proportion to the project involved and the resource value of the receiving stream. Methods for conducting a use attainability analysis may be found in the November 1983 United States Environmental Protection Agency publication entitled *Technical Support Manual: Waterbody Surveys and Assessments for Conducting Use Attainability Analyses*. Other scientific methods, including the use of existing technical data, may be used for justifying the removal of a designated use, provided the methods are agreed upon prior to the study. Such other methods may include the use of information previously gathered through technical studies, use attainability analysis, or both. Use attainability analysis procedures may be found in the State of Arkansas Continuing Planning Process document. Any waterbody on which a use attainability analysis is approved shall be listed in Appendix A with appropriate criteria.

#### **Rule 2.304      Physical Alteration of Habitat**

Significant physical alterations of the habitat within Extraordinary Resource Waters, Ecologically Sensitive Waterbodies, or Natural and Scenic Waterways are not allowed. In other waters, where significant physical alterations of the habitat are proposed, the Division must be assured that no significant degradation of any existing use or water quality necessary to protect that use will occur. In order to make such determinations, the Division may require an evaluation of all practicable alternatives to the project including: an environmental assessment of the impacts of each alternative, an engineering and economic analysis, and a socio-economic evaluation of the project in the local area.

#### **Rule 2.305      Short Term Activity Authorization**

The Director may authorize, with whatever conditions deemed necessary and without public notice, short term activities which might cause a violation of the Arkansas Water Quality Standards. This authorization is subject to the provisions that such activity is essential to the protection or promotion of the public interest and that no permanent or long-term impairment of beneficial uses is likely to result from such activity. Nothing herein shall be intended to supersede existing state and federal permitting processes or requirements.

Activities eligible for authorization include, but are not limited to:

- (A) wastewater treatment facility maintenance;
- (B) fish eradication projects;
- (C) mosquito abatement projects;
- (D) algae and weed control projects;
- (E) dredge and fill projects;

- (F) construction activities; or
- (G) activities which result in overall enhancement or maintenance of beneficial uses.

The Director shall specify the degree of variance from the standards, the time limit of activity, and restoration procedures where applicable.

Such authorization shall not be granted for activities which result in the adverse impact on any federally threatened or endangered species or on critical habitat of such species.

**Rule 2.306      Procedures for Removal of Any Designated Use Except Fishable/Swimmable, Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway, and Modification of Water Quality Criteria not Related to These Uses**

This procedure is applicable in those cases where the Commission chooses to establish less stringent water quality criteria without affecting a fishable/swimmable use or the designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway, or when the Commission chooses to remove a use which is not an existing use other than fishable/swimmable, Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway.

The Commission may allow a modification of the water quality criteria or the removal of a use which is not a fishable/swimmable use or designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway to accommodate important economic or social development in a local area, if existing uses are maintained and protected fully and the requirements for public participation in the State of Arkansas Continuing Planning Process are met. As a minimum, the following information shall be submitted to the Director before initiation of the public participation process:

- (A) Technological or economic limits of treatability.
- (B) Economic analysis of the impact on the local area.
- (C) Documentation that the use being removed is not an existing use and that all other designated uses will be protected.

Modifications made pursuant to this section may be required to be rejustified for continued support. As community water needs change, or technological advancement, including long-term environmental improvement projects, make treatment options more practicable, the Commission may reevaluate the need for the reestablishment of the more stringent water quality criteria or the removed use.

Any waterbody on which such alterations are approved will be ~~se~~ listed in Appendix A with the applicable changes noted.

**Rule 2.307      Use Subcategories**

The Commission may adopt sub-categories of a use and set the appropriate criteria to reflect varying needs of such sub-categories of uses; for instance, to differentiate between cold and warm water fisheries or agricultural and domestic water supply.

**Rule 2.308      Site Specific Criteria**

In establishing criteria:

- (A) Establish numerical criteria values based on:
  - (1) 304(a) Guidance; or
  - (2) 304(a) Guidance modified to reflect site conditions (i.e., Water Effects Ratio); or
  - (3) Other scientifically defensible methods.
- (B) Establish narrative criteria or criteria based upon biomonitoring methods where numerical criteria cannot be established or to supplement numerical criteria.

**Rule 2.309      Water Quality Standards Temporary Variance**

A water quality standards temporary variance shall be developed in accordance with and meet the requirements of 40 C.F.R. §131.14 and must be approved by the Arkansas Pollution Control and Ecology Commission and the United States Environmental Protection Agency.

**Rule 2.310      Procedure for the Removal of the Designated Use of Extraordinary Resource Water, or Ecologically Sensitive Waterbody, or Natural and Scenic Waterway for the Purpose of Constructing a Reservoir on a Free Flowing Waterbody to Provide a Domestic Water Supply.**

(A) An Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway designated use may be removed from a free flowing waterbody for the purpose of constructing a reservoir to provide a domestic water supply, if it can be demonstrated that:

- (1) the sole purpose for the funding and construction of the reservoir is to provide a domestic water supply; and
- (2) there is no feasible alternative to constructing a reservoir in order to meet the domestic water needs of the citizens of the State of Arkansas.

The limitation in Subsection A(1) of this section does not prohibit incidental uses of the reservoir that are consistent with the use of domestic water supply.

(B) A petition to initiate rulemaking to remove an Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway designated use from a free flowing

waterbody in order to construct a reservoir to provide a domestic water supply may be submitted to the Commission by a regional water distribution district, public facilities board, public water authority, or other public entity engaged in providing water to the public. Such petition, at a minimum, shall include:

- (1) A map depicting the location of the proposed project and the area to be impounded;
- (2) A description of the proposed project, including detailed design plans;
- (3) A certification that the proposed structure to impound the free flowing stream shall be funded and constructed solely for the purpose of providing a domestic water supply;
- (4) An evaluation of all alternatives to the proposed project, including:
  - (i) an environmental assessment of the impacts of each alternative on the instream and downstream water quality, the instream habitat, and the habitat and plant and animal life in the area upstream, downstream, and to be inundated by the proposed project;
  - (ii) the costs associated with, and an economic analysis for, each alternative;
  - (iii) an engineering analysis for each alternative; and
  - (iv) a socio-economic evaluation of the project to the local area and to the State as a whole; and
- (5) Information and supporting documentation which address the criteria set forth in Appendix E;
- (6) A recommendation to the Commission from the Director on whether or not the designated use should be maintained based upon a review of the information and supporting documentation required to be considered in Appendix E. The Director shall provide the petitioner with the Director's recommendation within 180 days of the Division's receipt of the petitioner's Appendix E submittal. If the Director does not deliver a recommendation to the petitioner within the 180 day time period, the petitioner may file its petition under this section without including a recommendation from the Director. The Director may submit a recommendation to the Commission at any time not less than 30 days prior to the Commission's final decision on the petition.
- (7) A description of any proposed mechanisms for protecting the domestic water supply, including but not limited to prohibitions to be placed on commercial and residential development along the proposed shoreline of the impoundment, the controls to be placed on public access to the water supply, and the legal authority for establishing and maintaining these domestic water supply protections; and
- (8) Any other submittals required by Rule 8 for a petition to initiate rulemaking.

(C) The Commission, as part of its rulemaking decision, shall determine whether or not a feasible alternative to constructing a reservoir is available to meet the domestic water needs of the citizens of the State of Arkansas. The Commission shall set forth the reasons for its determination in writing. The designated use of Extraordinary Resource Water, Ecologically

Sensitive Waterbody, or Natural and Scenic Waterway shall not be removed by the Commission if a feasible alternative to constructing a reservoir is available to meet the domestic water needs of the citizens of the State of Arkansas.

(D) The Commission, as part of its rulemaking, shall determine whether or not the sole purpose for the funding and construction of the reservoir is to provide a domestic water supply. The Commission shall set forth the reasons for its determination in writing. The designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway shall not be removed by the Commission if the purpose for the funding and construction of the reservoir is other than to provide a domestic water supply. In no circumstance, shall the designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway be removed by the Commission from a free flowing waterbody in order to construct a reservoir for recreational, flood control, or economic purposes other than providing a domestic water supply.

(E) The Commission, as part of its rulemaking decision, shall determine whether or not the designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway of a given waterbody should be maintained. The Commission shall set forth the reasons for its determination in writing, after considering the Director's recommendation referenced in Subsection (B)(6) of this section and reviewing the information and supporting documentation which address the criteria set forth in Appendix E.

**Rule 2.311      Procedure for the Addition of the Designated Use of Extraordinary Resource Water, or Ecologically Sensitive Waterbody, or Natural and Scenic Waterway to a Waterbody or Segment of a Waterbody.**

(A) Any waters of the State may be nominated for designation as an Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway by submitting a petition to initiate rulemaking to the Arkansas Pollution Control and Ecology Commission. Such petition shall include, at a minimum, the following:

- (1) Name of petitioner;
- (2) Petitioner's mailing address and telephone number;
- (3) Name and location description of the waterbody or segment proposed for designation;
- (4) A map depicting the waterbody or segment proposed for designation;
- (5) Petitioner's interest in the proposed action;
- (6) Statement of potential benefits and impacts of the proposed action, including economic benefits and impacts;
- (7) Evidence of requests for resolution(s) by appropriate local government(s) regarding the nomination of the waterbody as an Extraordinary Resource Water,

Ecologically Sensitive Waterbody, or Natural and Scenic Waterway;

(8) Supporting documentation for the designation, including information which addresses the factors listed in Appendix F;

(9) Recommended language change necessary to affect this proposed change to any Commission rule; and

(10) Any other submittals required by Rule 8 for a petition to initiate rulemaking.

(B) The Commission, as part of its rulemaking, shall set forth in writing the reasons for its final decision.

## CHAPTER 4: GENERAL STANDARDS

### **Rule 2.401      Applicability**

Unless otherwise indicated in this Chapter or in Appendix A, the general standards outlined below are applicable to all surface waters of the State at all times. They apply specifically with regard to substances attributed to discharges, nonpoint sources, or instream activities as opposed to natural phenomena. Waters may, on occasion, have natural background levels of certain substances outside the limits established by these criteria, in which case these criteria do not apply.

### **Rule 2.402      Nuisance Species**

All waters shall be free from substances attributed to man-caused point or nonpoint source discharges in concentrations that produce undesirable aquatic biota or result in the dominance of nuisance species.

### **Rule 2.403      Methods**

The methods of sample collection, preservation, measurements, and analyses shall be in accordance with the United States Environmental Protection Agency *Guidelines Establishing Test Procedures for the Analysis of Pollutants* (40 C.F.R. § 136) or other proven methods acceptable to the.

### **Rule 2.404      Mixing Zones**

Where mixing zones are allowed, the effects of wastes on the receiving stream shall be determined after the wastes have been thoroughly mixed with the mixing zone volume. Outfall structures should be designed to minimize the extent of mixing zones to ensure rapid and complete mixing.

For aquatic life toxic substances in larger streams (those with Q7-10 flows equal to or greater than 100 cfs), the zone of mixing shall not exceed 1/4 of the cross-sectional area and/or critical flow volume of the stream. The remaining 3/4 of the stream shall be maintained as a zone of passage for swimming and drifting organisms, and shall remain of such quality that stream ecosystems are not significantly affected. In the smaller streams (Q7-10 flows less than 100 cfs) because of varying local physical and chemical conditions and biological phenomena, a site-specific determination shall be made on the percentage of river width necessary to allow passage of critical free-swimming and drifting organisms so that negligible or no effects are produced on their populations. As a guideline, no more than 2/3 of the cross-sectional area and/or critical flow volume of smaller streams should be devoted to mixing zones thus leaving at least 1/3 of the cross-sectional area free as a zone of passage.

Mixing zones are not allowed for the parameters of bacteria or oil and grease, or where the background flow is less than the critical flow or where the background concentration of a waste parameter exceeds the specific criteria for that waste parameter.

In lakes and reservoirs the size of mixing zones shall be defined by the Division on an individual basis, and the area shall be kept at a minimum.

Mixing zones shall not prevent the free passage of fish or significantly affect aquatic ecosystems.

A mixing zone shall not include any domestic water supply intake.

#### **Rule 2.405      Biological Integrity**

For all waters with specific aquatic life use designated in Appendix A, aquatic biota should not be impacted. Aquatic biota should be representative of streams that have the ability to support the designated fishery, taking into consideration the seasonal and natural variability of the aquatic biota community under naturally varying habitat and hydrological conditions; the technical and economic feasibility of the options available to address the relevant conditions; and other factors.

An aquatic biota assessment should compare biota communities that are similar in habitat and hydrologic condition, based upon either an in-stream study including an upstream and downstream comparison, a comparison to a reference water body within the same ecoregion, or a comparison to community characteristics from a composite of reference waters. Such a comparison should consider the seasonal and natural variability of the aquatic biota community. It is the responsibility of the Division to evaluate the data for an aquatic biota assessment to protect aquatic life uses designated in Appendix A. Such data may be used to develop permit effluent limitations or conditions.

#### **Rule 2.406      Color**

True color shall not be increased in any waters to the extent that it will interfere with present or projected future uses of these waters.

#### **Rule 2.407      Taste and Odor**

Taste and odor producing substances shall be limited in receiving waters to concentrations that will not interfere with the production of potable water by reasonable water treatment processes, impart unpalatable flavor to food or fish, result in offensive odors arising from the waters, or otherwise interfere with the reasonable use of the water.

#### **Rule 2.408      Solids, Floating Material and Deposits**

Receiving waters shall have no distinctly visible solids, scum, or foam of a persistent nature, nor shall there be any formation of slime, bottom deposits, or sludge banks.

**Rule 2.409      Toxic Substances**

Discharges shall not be allowed into any waterbody which, after consideration of the zone of initial dilution, the mixing zone, and critical flow conditions, will cause toxicity to human, animal, plant, or aquatic biota or interfere with normal propagation, growth, and survival of aquatic biota.

**Rule 2.410      Oil and Grease**

Oil, grease, or petrochemical substances shall not be present in receiving waters to the extent that they produce globules, other residue, or any visible, colored film on the surface; coat the banks and/or bottoms of the waterbody; or adversely affect any of the aquatic biota.

## CHAPTER 5: SPECIFIC STANDARDS

### Rule 2.501      **Applicability**

Unless otherwise indicated in this Chapter or in Appendix A, the following specific standards shall apply to all surface waters of the State at all times except during periods when flows are less than the applicable critical flow. Streams with regulated flow will be addressed on a case-by-case basis to maintain designated instream uses. These standards apply outside the applicable mixing zone. Waters may, on occasion, have natural background levels of certain substances outside the limits established by these criteria, in which case these criteria do not apply to the naturally occurring excursions.

### Rule 2.502      **Temperature**

Heat shall not be added to any waterbody in excess of the amount that will elevate the natural temperature, outside the mixing zone, by more than 5°F (2.8°C) based upon the monthly average of the maximum daily temperatures measured at mid-depth or three feet (whichever is less) in streams, lakes, or reservoirs.

The following criteria are applicable:

<b>Waterbodies</b>	<b>Criteria °C (°F)</b>
<b>Streams</b>	
Ozark Highlands	29 (84.2)
Boston Mountains	31 (87.8)
Arkansas River Valley	31 (87.8)
Ouachita Mountains	30 (86.0)
Springwater-influenced Gulf Coastal	30 (86.0)
Typical Gulf Coastal	30 (86.0)
Least-Altered Delta	30 (86.0)
Channel-Altered Delta	32 (89.6)
White River (Dam #1 to mouth)	32 (89.6)
St. Francis River	32 (89.6)
Mississippi River	32 (89.6)
Arkansas River	32 (89.6)
Ouachita River (L. Missouri R.to Louisiana state line)	32 (89.6)
Red River	32 (89.6)
<b>Lakes and Reservoirs</b>	32 (89.6)
<b>Trout Waters</b>	20 (68.0)

Temperature requirements shall not apply to off-stream privately-owned reservoirs constructed primarily for industrial cooling purposes and financed in whole or in part by the entity or successor entity using the lake for cooling purposes.

### **Rule 2.503      Turbidity**

There shall be no distinctly visible increase in turbidity of receiving waters attributable to discharges or instream activities.

The values below should not be exceeded during base flow (June 1 through October 31) in more than 20% of samples. The values below should not be exceeded during storm flows in more than 25% of samples taken in no less than 24 monthly samples.

<b>Waterbodies</b>	<b>Base Flows Values (NTU)</b>	<b>Storm Flows Values (NTU)</b>
<b>Streams</b>		
Ozark Highlands	10	17
Boston Mountains	10	19
Arkansas River Valley	21	40
Ouachita Mountains	10	18
Springwater-influenced Gulf Coastal	21	32
Typical Gulf Coastal	21	32
Least-Altered Delta	45	84
Channel-Altered Delta	75	250
Arkansas River	50	52
Mississippi River	50	75
Red River	50	150
St. Francis River	75	100
Trout Waters	10	15
<b>Lakes and Reservoirs</b>	25	45

### **Rule 2.504      pH**

pH between 6.0 and 9.0 standard units are the applicable criteria for rivers, streams, lakes, and reservoirs. As a result of waste discharges, the pH of water in streams or lakes must not fluctuate in excess of 1.0 standard unit over a period of 24 hours.

## **Rule 2.505      Dissolved Oxygen**

### **Rivers and Streams**

The following dissolved oxygen criteria are applicable:

<b>Waterbodies</b>	<b>Criteria (mg/L)</b>	
	Primary	Critical
<b>Streams</b>		
Ozark Highlands		
<10 mi <sup>2</sup> watershed	6	2
10 to 100 mi <sup>2</sup>	6	5
>100 mi <sup>2</sup> watershed	6	6
 Boston Mountains		
<10 mi <sup>2</sup> watershed	6	2
>10 mi <sup>2</sup> watershed	6	6
 Arkansas River Valley		
<10 mi <sup>2</sup> watershed	5	2
10 mi <sup>2</sup> to 150 mi <sup>2</sup>	5	3
151 mi <sup>2</sup> to 400 mi <sup>2</sup>	5	4
>400 mi <sup>2</sup> watershed	5	5
 Ouachita Mountains		
<10 mi <sup>2</sup> watershed	6	2
>10 mi <sup>2</sup> watershed	6	6
 Typical Gulf Coastal		
<10 mi <sup>2</sup> watershed	5	2
10 mi <sup>2</sup> to 500 mi <sup>2</sup>	5	3
 >500 mi <sup>2</sup> watershed	5	5
 Springwater-influenced Gulf Coastal		
All size watersheds	6	5
 Delta (least-altered and channel altered)		
<10 mi <sup>2</sup> watershed	5	2
10 mi <sup>2</sup> to 100 mi <sup>2</sup>	5	3
>100 mi <sup>2</sup> watershed	5	5
 Trout Waters		
All size watersheds	6	6

In streams with watersheds of less than 10 mi<sup>2</sup>, it is assumed that insufficient water exists to support aquatic life during the critical season. During this time, a dissolved oxygen criteria of

2 mg/L will apply to prevent nuisance conditions. However, field verification is required in areas suspected of having significant groundwater flows or enduring pools that may support unique aquatic biota. In such waters the critical season criteria for the next size category of stream shall apply.

All streams with watersheds of less than 10 mi<sup>2</sup> are expected to support aquatic life during the primary season when stream flows, including discharges, equal or exceed 1 cubic foot per second (cfs). However, when site verification indicates that aquatic life exists at flows below 1 cfs, such aquatic biota will be protected by the primary standard (refer to the State of Arkansas Continuing Planning Process for field verification requirements).

Also in streams with watersheds of less than 10 mi<sup>2</sup>, where waste discharges are 1 cfs or more, streams are assumed to provide sufficient water to support aquatic life and, therefore, must meet the dissolved oxygen criteria of the next size category of streams.

For purposes of determining effluent discharge limits, the following conditions shall apply:

- (A) The primary season dissolved oxygen standard is to be met at a water temperature of 22°C (71.5°F) and at the minimum stream flow for that season. At water temperatures of 10°C (50°F), the dissolved oxygen criteria is 6.5 mg/L.
- (B) During March, April and May, when background stream flows are 15 cfs or higher, the dissolved oxygen standard is 6.5 mg/L in all areas except the Delta Ecoregion, where the primary season dissolved oxygen criteria will remain at 5 mg/L.
- (C) The critical season dissolved oxygen standard is to be met at maximum allowable water temperatures and at Q7-10 flows. However, when water temperatures exceed 22°C (71.6°F), a 1 mg/L diurnal depression will be allowed below the applicable critical criteria for no more than 8 hours during any 24-hour period.

## **Lakes and Reservoirs**

Specific dissolved oxygen criteria for lakes and reservoirs shall be 5 mg/L.

Effluent limits for oxygen-demanding discharges into impounded waters are promulgated in Arkansas Pollution Control and Ecology Commission Rule 6, Rules for State Administration of the National Pollutant Discharge Elimination System (NPDES).

However, the Commission may, after full satisfaction of the intergovernmental coordination and public participation provisions of the State of Arkansas Continuing Planning Process, establish alternative limits for dissolved oxygen in lakes and reservoirs where studies and other relevant information can demonstrate that predominant ecosystem conditions may be more accurately reflected by such alternate limits; provided that these limits shall be compatible with all designated beneficial uses of named lakes and reservoirs.

## **Rule 2.506      Radioactivity**

The Rules and Regulations for the Control of Sources of Ionizing Radiation of the Division of Radiological Health, Arkansas Department of Health, limits the maximum permissible levels of radiation that may be present in effluents to surface waters in uncontrollable areas. These limits shall apply for the purposes of these standards, except that in no case shall the levels of dissolved radium-226 and strontium-90 exceed 3 and 10 picocuries/liter, respectively, in the receiving water after mixing, nor shall the gross beta concentration exceed 1000 picocuries/liter.

## **Rule 2.507      Bacteria**

For the purposes of this rule, all streams with watersheds less than 10 mi<sup>2</sup> shall not be designated for primary contact unless and until site verification indicates that such use is attainable. Secondary contact use is assumed in all watershed sizes. No mixing zones are allowed for discharges of bacteria.

For assessment of ambient waters as impaired by bacteria, the below listed applicable criteria for *E. coli* shall not be exceeded in more than 25% of individual samples in no less than eight (8) samples taken during the primary contact season or during the secondary contact season.

The following criteria are applicable:

<b><u>Contact Recreation Seasons</u></b>	<b><u>Criteria (col/100mL)</u></b>			
<b><u>Primary Contact</u></b> <sup>1</sup>	<i>E. coli</i>		Fecal Coliform	
	<i>IS</i> <sup>3</sup>	<i>GM</i> <sup>4</sup>	<i>IS</i> <sup>3</sup>	<i>GM</i> <sup>4</sup>
ERW, ESW, NSW, Reservoirs, Lakes	298	126	400	200
All Other Waters	410	-	400	200
<b><u>Secondary Contact</u></b> <sup>5</sup>				
ERW, ESW, NSW, Reservoirs, Lakes	1490	630	2000	1000
All Other Waters	2050	-	2000	1000

<sup>1</sup> May 1 to September 30

<sup>2</sup> (RESERVED)

<sup>3</sup> For assessment of Individual Sample Criteria– at least eight (8) data points

<sup>4</sup> For calculation and assessment of Geometric Mean – calculated on a minimum of five (5) samples spaced evenly and within a thirty (30)-day period.

<sup>5</sup> Year-round.

The Arkansas Department of Health has the responsibility of approving or disapproving surface waters for public water supply and of approving or disapproving the suitability of specifically delineated outdoor bathing places for body contact recreation, and it has issued rules pertaining to such uses.

**Rule 2.508 Toxic Substances**

Toxic substances shall not be present in receiving waters, after mixing, in such quantities as to be toxic to human, animal, plant or aquatic life or to interfere with the normal propagation, growth and survival of the indigenous aquatic biota. Acute toxicity standards apply outside the zone of initial dilution. Within the zone of initial dilution acute toxicity standards may be exceeded but acute toxicity may not occur. Chronic toxicity and chronic numeric toxicity standards apply at, or beyond, the edge of the mixing zone. Permitting of all toxic substances shall be in accordance with the toxic implementation strategy found in the State of Arkansas Continuing Planning Process. For non-permit issues and as a guideline for evaluating toxic substances not listed in the following tables, the Division may consider No Observed Effect Concentrations or other literature values as appropriate. For the substances listed below, the following standards shall apply:

**ALL WATERBODIES - AQUATIC LIFE CRITERIA**

<b><u>Substance</u></b>	<b><u>Acute Values (µg/L)</u></b>	<b><u>Chronic Values (µg/L)</u></b> <b>(24-hr Average)</b>
PCBs		0.0140

Toxaphene	6.3

\* Criteria based on a lifetime risk factor of  $10^{-5}$ .

\*\* 4000 ng/L is also represented as 4.0 ug/L, which is the maximum contaminant level under the Safe Drinking Water Act, 42 U.S.C. § 300f *et seq.*

The permittee shall have the option to develop site-specific numerical standards for toxic substances using United States Environmental Protection Agency approved bioassay methodology and guidance. Such guidance may include but may not be limited to *Water Quality Standards Handbook; Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and Their Uses* (August, 1994); *Methods for Measuring the Acute Toxicity of Effluents to Freshwater and Marine Organisms* (EPA 600/4-90/027F. 5<sup>th</sup> ed. December 2002); *Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms* (EPA/600/4-91/002. 4<sup>th</sup> ed. October 2002) or most recent update thereof.

Only ambient water quality data for dissolved metals generated or approved by the Division after March 1, 1993 will be considered in the documentation of background concentrations for the purpose of developing permit limitations.

### **Rule 2.509      Nutrients**

(A) Materials stimulating algal growth shall not be present in concentrations sufficient to cause objectionable algal densities or other nuisance aquatic vegetation or otherwise impair any designated use of the waterbody. Impairment of a waterbody from excess nutrients is dependent on the natural waterbody characteristics such as stream flow, residence time, stream slope, substrate type, canopy, riparian vegetation, primary use of waterbody, season of the year, and ecoregion water chemistry. Because nutrient water column concentrations do not always correlate directly with stream impairments, impairments will be assessed by a combination of factors such as water clarity, periphyton or phytoplankton production, dissolved oxygen values, dissolved oxygen saturation, diurnal dissolved oxygen fluctuations, pH values, aquatic-life community structure and possibly others. However, when excess nutrients result in an impairment, based upon Division assessment methodology, by any Arkansas established numeric water quality criteria, the waterbody will be determined to be impaired by nutrients.

(B) Site Specific Nutrient Criteria

Lake	Chlorophyll a (ug/L)**	Secchi Transparency (m)***
Beaver Lake*	8	1.1

\*These criteria are for measurement at the Hickory Creek site over the old thalweg, below the confluence of War Eagle Creek and the White River in Beaver Lake.

\*\*Growing season geometric mean (May - October)

\*\*\*Annual Average

All point source discharges into the watershed of waters officially listed on Arkansas's impaired waterbody list (303(d)) with phosphorus as the major cause shall have monthly average discharge permit limits no greater than those listed below. Additionally, waters in nutrient surplus watersheds as determined as set forth in Ark. Code Ann. § 15-20-1104, and subsequently designated nutrient surplus watersheds may be included under this Rule if point source discharges are shown to provide a significant phosphorus contribution to waters within the listed nutrient surplus watersheds.

<u>Facility Design Flow – mgd</u>	<u>Total Phosphorus discharge limit – mg/L</u>
= or > 15	Case by case
3 to <15	1.0
1 to <3	2.0
0.5 to <1.0	5.0
<0.5	Case by Case

For discharges from point sources which are greater than 15 mgd, reduction of phosphorus below 1 mg/L may be required based on the magnitude of the phosphorus load (mass) and the type of downstream waterbodies (e.g., reservoirs, Extraordinary Resource Waters). Additionally, any discharge limits listed above may be further reduced if it is determined that these values are causing impairments to special waters such as domestic water supplies, lakes or reservoirs, or Extraordinary Resource Waters.

**Rule 2.510 Oil and Grease**

Oil, grease, or petrochemical substances shall not be present in receiving waters to the extent that they produce globules, other residue, or any visible, colored film on the surface; coat the banks and/or bottoms of the waterbodies; or adversely affect any of the aquatic biota. Oil and grease shall be an average of no more than 10 mg/L or a maximum of no more than 15 mg/L. No mixing zones are allowed for discharges of oil and grease.

**Rule 2.511 Mineral Quality**

(A) Site Specific Mineral Quality Criteria

Mineral quality shall not be altered by municipal, industrial, other waste discharges or instream activities so as to interfere with designated uses.

The following criteria apply to the streams indicated.

<u>Stream</u>	<u>Concentration-mg/L</u>

ER - ecoregion value

\* developed using background flow of 4 cfs

\*\* These criteria shall apply to all tributaries of Bayou Meto and Bayou Two Prairie listed in Appendix A

Any modification of these values must be made in accordance with Rule 2.306.

† Not applicable for Clean Water Act purposes until approved by EPA.

\*\*\*These temporary standards variations are effective for 148 months from EPA's approval of the EIP on January 7, 2020.

**(B) Ecoregion Reference Stream Minerals Values**

The following values were determined from Arkansas's least-disturbed ecoregion reference streams and are considered to be the maximum naturally occurring levels. For waterbodies not listed above, any discharge that results in instream concentrations more than 1/3 higher than these values for chlorides (Cl<sup>-</sup>) and sulfates (SO<sub>4</sub><sup>2-</sup>) or more than 15 mg/L, whichever is greater, is considered to be a significant modification of the maximum naturally occurring values. These waterbodies should be considered as candidates for site specific criteria development in accordance with Rules 2.306 and 2.308. Similarly, site specific criteria development should be considered if the following TDS values are exceeded after being increased by the sum of the increases to Cl<sup>-</sup> and SO<sub>4</sub><sup>2-</sup>. Such criteria may be developed only in accordance with Rules 2.306 and 2.308. The values listed in the table below are not intended to be used by the Division to evaluate attainment of water quality standards for assessment purposes.

**ECOREGION REFERENCE STREAM VALUES (mg/L)**

Ecoregion	Chlorides (Cl <sup>-</sup> )	Sulfates (SO <sub>4</sub> <sup>2-</sup> )	TDS
Ozark Highlands	13	17	240
Boston Mountains	13	9	85
Arkansas River Valley	10	13	103
Ouachita Mountains	6	15	128
Gulf Coastal Plains	14	31	123
Delta	36	28	390

(C) Domestic Water Supply Criteria

In no case shall discharges cause concentrations in any waterbody to exceed 250, 250, and 500 mg/L of chlorides, sulfates, and total dissolved solids, respectively, or cause concentrations to exceed the applicable criteria, except in accordance with Rules 2.306 and 2.308.

**Rule 2.512      Ammonia**

The total ammonia nitrogen (N) criteria and the frequency of occurrence are as follows:

(A) The one-hour average concentration of total ammonia nitrogen shall not exceed, more than once every three years on the average, the acute criterion as shown in the following table:

**pH-Dependent Values of the CMC (Acute Criterion)- mg/L**

<b><u>pH</u></b>	<b><u>Salmonids*</u></b>	<b><u>Salmonids</u></b>

\* At 15° C and above, the criterion for fish Early Life Stage absent is the same as the criterion for fish-Early Life Stage present.

(C) The highest four-day average within a 30-day period should not exceed 2.5 times the chronic values shown above.

(D) For permitted discharges, the daily maximum or seven-day average permit limit shall be calculated using the four-day average value described above as an instream value, after mixing and based on a season when fish early life stages are present and a season when fish early life stages are absent. Temperature values used will be 14° C when fish early life stages are absent and the ecoregion temperature standard for the season when fish early life stages are present. The pH values will be the ecoregion mean value from least-disturbed stream data.

## **CHAPTER 6: EFFECTIVE DATE**

This rule is effective ten (10) days after filing with the Secretary of State, The State Library, and the Bureau of Legislative Research.

# **RULE 2**

# **APPENDIX A**

**Designated Uses, Specific Standards, and Maps of Waters of  
the State by Ecoregions**

## APPENDIX A: MAP OF ECOREGIONS OF ARKANSAS

Ozark Highlands	A-3	Ouachita Mountains	A-23
Boston Mountains	A-11	Gulf Coastal	A-30
Arkansas River Valley	A-17	Delta	A-41

# Index to Plates of the Ozark Highlands

## **DESIGNATED USES: OZARK HIGHLANDS ECOREGION**

(Plates OH-1, OH-2, OH-3, OH-4)

### **Extraordinary Resource Waters**

Current River (OH-4)

Eleven Point River (OH-4)

Strawberry River (OH-3, OH-4)

Little Strawberry River (OH-3)

Spring River, including its tributaries: Field Creek, Big Creek, English Creek, Gut Creek and Myatt Creek (OH-4)

South Fork Spring River (OH-3, OH-4)

North Sylamore Creek (OH-3)

Buffalo River (OH-2, OH-3)

Kings River (OH-2)

Bull Shoals Reservoir (OH-2, OH-3)

### **Natural and Scenic Waterways**

Strawberry River from headwaters to Sharp-Izard County Line (OH-3, OH-4)

Kings River - that segment in Madison County (OH-2)

Buffalo River (OH-2, OH-3)

North Sylamore Creek (OH-3)\*

### **Ecologically Sensitive Waterbodies**

Cave Springs Cave, Logan Cave and numerous springs and spring-fed tributaries which support southern cavefish, Ozark cavefish, Arkansas darter, least darter, Oklahoma salamander, cave snails, cave crawfish and unique invertebrates (OH-1, OH-2, OH-3)

Strawberry River – location of Strawberry River darter (OH-3, OH-4)

Little Strawberry River – location of the Strawberry River darter (OH-3)

Spring River – snuffbox and pink mucket mussels; Ozark hellbender (OH-4)

Rock Creek – snuffbox and pink mucket mussels; Ozark hellbender (OH-4)

Eleven Point River – location of Ozark hellbender (OH-4)

Current River – location of flat floater and pink mucket mussels (OH-4)

Illinois River – Neosho mucket (OH-1)

**Primary Contact Recreation** - all streams with watersheds of greater than 10 mi<sup>2</sup> and all lakes/reservoirs\*\*

**Secondary Contact Recreation** - all waters\*\*

**Domestic, Industrial and Agricultural Water Supply** - all waters\*\*

### **Aquatic Life\*\***

#### **Trout Waters**

Bull Shoals Reservoir - lower portion (OH-2)

White River from Bull Shoals Dam to Dam #3 (OH-3)

North Fork White River (OH-3)

Spring River from Mammoth Springs to South Fork Spring River (OH-4)

Upper White River from Beaver Dam to Missouri state line (OH-1)

#### **Lakes and Reservoirs - all**

#### **Streams**

Seasonal Ozark Highlands aquatic life use - all streams with watersheds of less than 10 mi<sup>2</sup> except as otherwise provided in Rule 2.505

Perennial Ozark Highlands aquatic life use - all streams with watersheds of 10 mi<sup>2</sup> and larger and those waters where discharges equal or exceed 1-cfs

---

\*As designated in the National Wild and Scenic Rivers System

\*\*Except for those waters with designated use variations supported by Use Attainability Analysis or other investigations.

**Site Specific Designated Use Variations Supported by Use Attainability Analysis or Other Investigations**

<b>Plate</b>	<b>Map Inset</b>	<b>Waterbody</b>	<b>Variation</b>
OH-1	1	Railroad Hollow Creek	No fishable/swimmable uses
OH-1	2	Columbia Hollow Creek	Seasonal aquatic life use March-June
OH-1	9	Town Branch from point of discharge of the City of Huntsville WWTP downstream to the confluence with Holman Creek	No domestic water supply use
OH-1	10	Holman Creek from the confluence with Town Branch downstream to the confluence with War Eagle Creek	No domestic water supply use
OH-3	4	Moccasin Creek below Arkansas Highway 177	Perennial aquatic life use
OH-4	3	Curia Creek below first waterfall	Perennial aquatic life use
OH-4	6	Stennitt Creek from Brushy Creek to Spring River	No domestic water supply use

**SPECIFIC CRITERIA: OZARK HIGHLANDS ECOREGION**

(Plates OH-1, OH-2, OH-3, OH-4)

	<b><u>Streams</u></b>	<b><u>Lakes and Reservoirs</u></b>
Temperature °C (°F)* Trout Waters	29 (84.2) 20 (68)	32 (89.6)
Turbidity (NTU) (base/storm) Trout Waters	10/17 10/15	25/45
Minerals	see Rule 2.511	see Rule 2.511
Dissolved Oxygen**	<u>Pri.</u> <u>Crit</u>	see Rule 2.505
<10 mi <sup>2</sup> watershed	6      2	
10 to 100 mi <sup>2</sup>	6      5	
>100 mi <sup>2</sup> watershed	6      6	
Trout Waters	6      6	

All other criteria (same as statewide)

\*Increase over natural temperatures may not be more than 2.8°C (5°F).

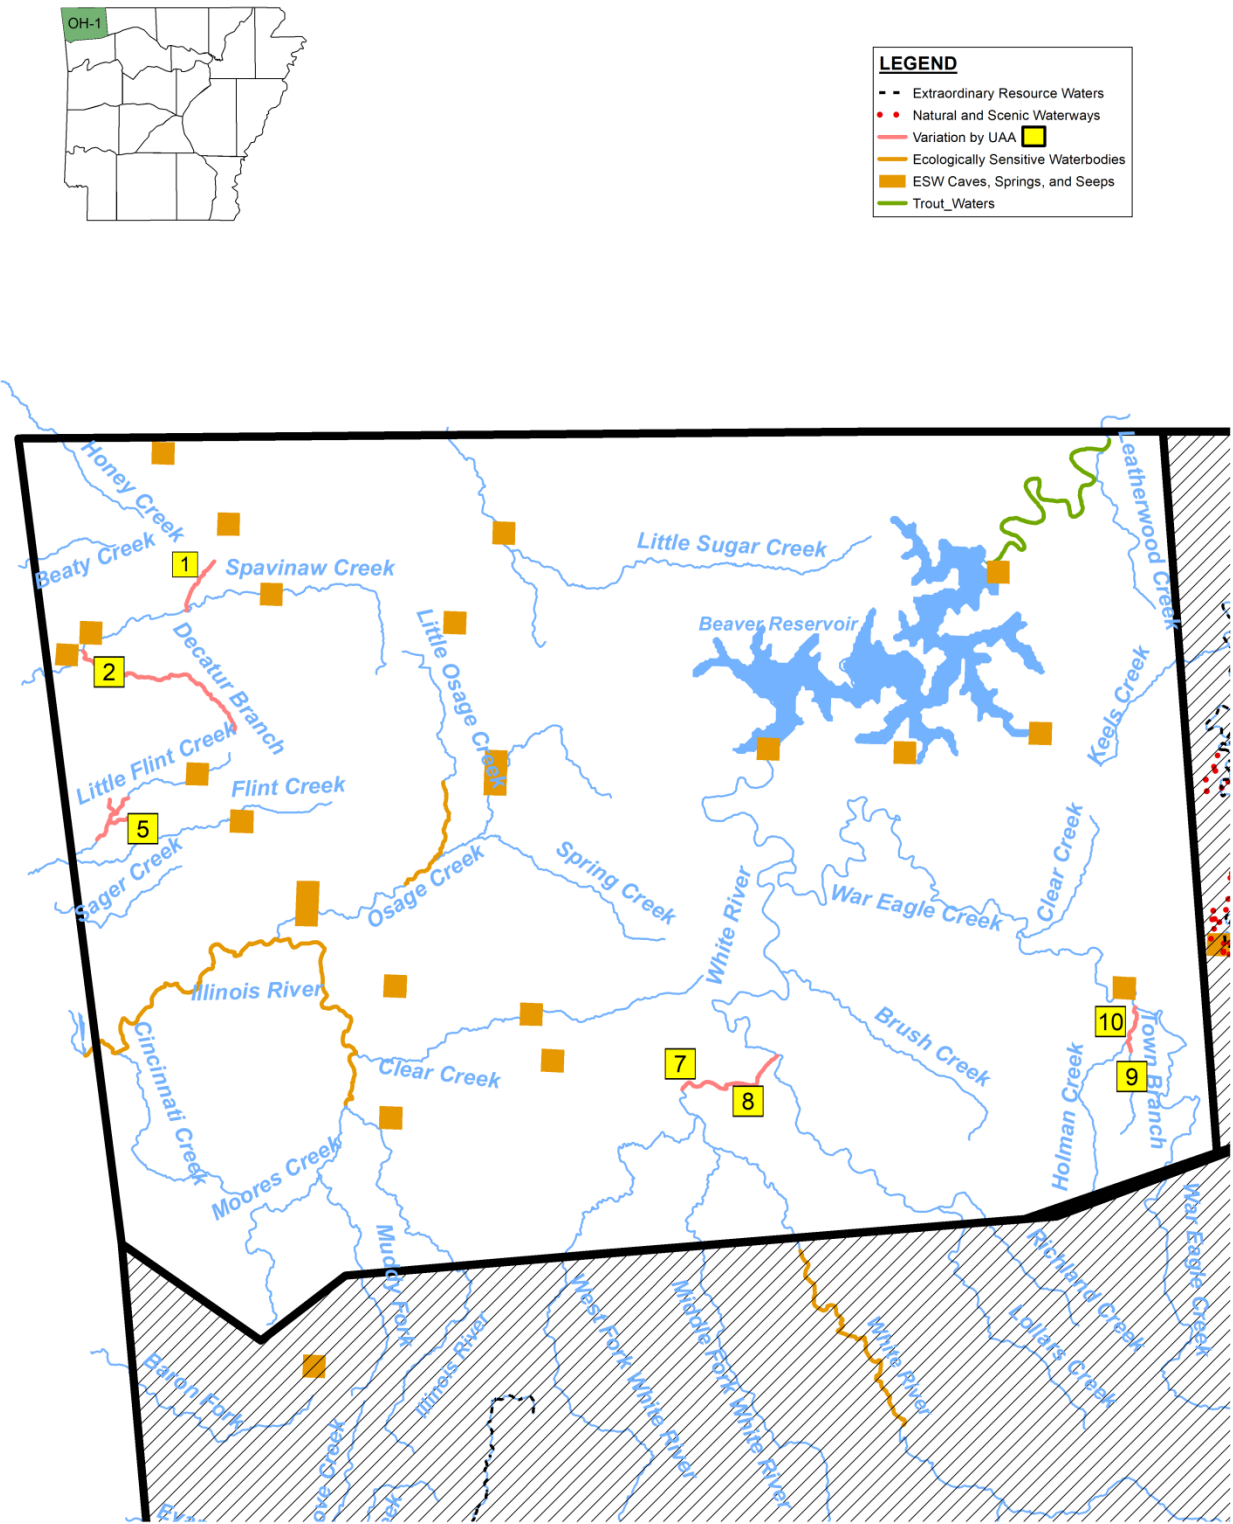

\*\*At water temperatures ≤ 10°C or during March, April and May when stream flows are 15 cfs and greater, the primary season dissolved oxygen standard will be 6.5 mg/L. When water temperatures exceed 22°C, the critical season dissolved oxygen standard may be depressed by 1 mg/L for no more than 8 hours during a 24-hour period.

**Site Specific Criteria Variations Supported by Use Attainability Analysis**

<b>Plate</b>	<b>Map Inset</b>	<b>Waterbody</b>	<b>Variation</b>
OH-1	1	Railroad Hollow Creek from headwaters to Spavinaw Creek	Year-round DO 2 mg/L
OH-1	5	SWEPCO Reservoir	Maximum temperature 54 °C (limitation of 2.8 °C above natural temperature does not apply)
OH-1	7	White River from Noland WWTP to 0.4 miles downstream (WR-02)	Chloride 44 mg/L, sulfate 79 mg/L, TDS 362 mg/L
OH-1	8	White River from WR-02 to WHI0052	Chloride 30 mg/L, sulfate 40 mg/L, TDS 237 mg/L
OH-1	9	Town Branch from point of discharge of the City of Huntsville WWTP Downstream to the confluence with Holman Creek	Chloride 223 mg/L, sulfate 61 mg/L, TDS 779 mg/L
OH-1	10	Holman Creek from the confluence with Town Branch downstream to the confluence with War Eagle Creek	Chloride 180 mg/L, sulfate 48 mg/L, TDS 621 mg/L
OH-2	7	Crooked Creek from Harrison WWTP outfall to DEQ Monitoring Station WHI0193	Chloride 22.6 mg/L, sulfate 24.4 mg/L, TDS 269 mg/L
OH-3	4	Moccasin Creek below Highway 177	Critical season DO 5mg/L
OH-3	8	Crooked Creek from DEQ Monitoring Station WHI0193 to mouth	TDS 238 mg/L

GC-2	41	Loutre Creek from Highway 15 S. to the confluence of Bayou de Loutre	No domestic water supply use
GC-2	51	Boggy Creek from the discharge from Clean Harbors El Dorado LCC downstream to the confluence of Bayou de Loutre	No domestic water supply use

<b>Plate</b>	<b>Map Inset</b>	<b>Waterbody</b>	<b>Variation</b>
GC-3	8	Coffee Creek* and Mossy Lake**	No fishable/swimmable or domestic water supply uses

<b>Plate</b>	<b>Map Inset</b>	<b>Waterbody</b>	<b>Variation</b>
GC-4	5	Dodson Creek	Perennial aquatic life use
GC-4	14	Town Creek below Acme tributary	No domestic water supply use
GC-4	14	Unnamed tributary from Acme	No domestic water supply use
GC-4	19	Alcoa unnamed tributary to Hurricane Creek and Hurricane Creek	No domestic water supply use
GC-4	20	Holly Creek	No domestic water supply use
GC-4	21	Dry Lost Creek and tributaries	No domestic water supply use
GC-4	22	Lost Creek	No domestic water supply use

\*“Coffee Creek” for purposes of Rule 2 is defined as Coffee Creek from below Mossy Lake to the Ouachita River.

\*\* Mossy Lake is excluded from the waters of the United States as defined by 40 C.F.R. § 120.2 because it functions as a component of GP’s waste treatment system.

## SPECIFIC CRITERIA: GULF COASTAL ECOREGION

(Plates GC-1, GC-2, GC-3, GC-4)

	<u>Typical Streams</u>	<u>Spring Water Streams</u>	<u>Lakes and Reservoirs</u>
Temperature °C (°F)*	30 (86)	30 (86)	32 (89.6)
Ouachita River			
(state line to Little Missouri River)	32 (89.6)		
Red River	32 (89.6)		
Little River			
(from Millwood Lake to the Red River)	32 (89.6)		
Trout Waters	20 (68)	20 (68)	
Turbidity (NTU) (base/storm)	21/32	21/32	25/45
Red River	50/150		
Trout Waters	10/15		
Minerals	see Rule 2.511		see Rule 2.511
Dissolved Oxygen (mg/L) **	<u>Pri.</u>	<u>Crit.</u>	see <u>Rule</u> 2.505
<10 mi <sup>2</sup> watershed	5	2	
10 mi <sup>2</sup> - 500 mi <sup>2</sup>	5	3	
>500 mi <sup>2</sup> watershed	5	5	
All sizes (springwater influenced)	6	5	
Trout Waters	6	6	
All other criteria	(same as statewide)		

\*Increase over natural temperatures may not be more than 2.8°C (5°F).

\*\*At water temperatures ≤ 10°C or during March, April and May when stream flows are 15 cfs and greater, the primary season dissolved oxygen criteria will be 6.5 mg/L. When water temperatures exceed 22°C, the critical season dissolved oxygen criteria may be depressed by 1 mg/L for no more than 8 hours during a 24-hour period

### Site Specific Criteria Variations Supported by Use Attainability Analysis

Plate	Map Inset	Waterbody	Variation
GC-1	7	Lick Creek - from headwaters to Millwood Reservoir	Critical season DO 2 mg/L
GC-1	9	Red River from Oklahoma state line to confluence with Little River	TDS 850 mg/L
GC-1	10	Bluff Creek and unnamed tributary	Sulfates 651 mg/L, TDS 1033 mg/L
GC-1	11	Mine Creek from Highway 27 to Millwood Lake	Chlorides 90 mg/L, sulfates 65 mg/L, TDS 700 mg/L
GC-1	12	Caney Creek	Chlorides 113 mg/L, sulfates 283 mg/L, TDS 420 mg/L
GC-1	24	Muddy Fork Little Missouri River	Sulfates 250 mg/L, TDS 500 mg/L
GC-1	25	Little Missouri River	Sulfates 90 mg/L, TDS 180 mg/L

Plate	Map Inset	Waterbody	Variation
GC-1	30	Unnamed tributary of Lake June below Entergy Couch Plant to confluence with Lake June	Maximum water temperature 95 degrees F (limitation of 5 degrees above natural temperature does not apply)
GC-1	55	Red River from mouth of the Little River to the Arkansas/Louisiana state line	TDS 780 mg/L
GC-1	56	Little River from Millwood Lake to the Red River	TDS 138mg/L; temperature 32 °C/89.6 °F

Plate	Map Inset	Waterbody	Variation
GC-2	1	Loutre Creek from headwaters to railroad bridge	Critical season DO 3 mg/L, primary season DO 5 mg/L
GC-2	1	Loutre Creek from railroad bridge to mouth	Critical season DO 2 mg/L
GC-2	2	Unnamed tributary to Smackover Creek headwaters to Smackover Creek	Year round DO 2 mg/L
GC-2	4	Unnamed tributary to Flat Creek from headwaters to Flat Creek	Year round DO2 mg/L
GC-2	6	Jug Creek - from headwaters to confluence with Moro Creek	Critical season DO 3 mg/L
GC-2	15	Gum Creek	Chlorides 104 mg/L, TDS 311 mg/L
GC-2	16	Bayou de Loutre from Gum Creek to State line	Chlorides 250 mg/L, TDS 750 mg/L
GC-2	17	Walker Branch	Chlorides 180 mg/L, TDS 970 mg/L
GC-2	27	Albemarle unnamed tributary (AUT) to Horsehead Creek	Chlorides 137 mg/L, TDS 383 mg/L
GC-2	27	Horsehead Creek from AUT to mouth	Chlorides 85 mg/L, TDS 260 mg/L
GC-2	27	Bayou Dorcheat	Sulfates 16 mg/L
GC-2	28	Dismukes Creek	Chlorides 26 mg/L, TDS 157 mg/L
GC-2	28	Big Creek from Dismukes to Bayou Dorcheat	Chlorides 20 mg/L, TDS 200 mg/L
GC-2	29	Bayou de Loutre from Chemtura outfall to Loutre Creek	Maximum water temperature 96°F
GC-2	51	Boggy Creek from the discharge from Clean Harbors El Dorado LCC downstream to the confluence of Bayou de Loutre.	Chloride 631mg/L, Sulfate 63 mg/L, TDS 1360 mg/L, Selenium 15.6 u/L

Plate	Map Inset	Waterbody	Variation
GC-3	8	Coffee Creek* and Mossy Lake**	Exempt from Rule 2.406 and Chapter Five

Plate	Map Inset	Waterbody	Variation
GC-3	26	Ouachita River from Ouachita River mile (ORM) 223 to the Arkansas-Louisiana border (ORM 221.1)	Site specific seasonal DO criteria: 3 mg/L June and July; 4.5 mg/L August; 5 mg/L September through May. These seasonal criteria may be unattainable during or following naturally occurring high flows, (i.e., river stage above 65 feet measured at the lower gauge at the Felsenthal Lock and Dam, Station No.89-o, and also for the two weeks following the recession of flood waters below 65 feet), which occurs from May through August. Naturally occurring conditions which fail to meet criteria should not be interpreted as violations of these criteria

\*"Coffee Creek" for purposes of Rule 2 is defined as Coffee Creek from below Mossy Lake to the Ouachita River.

\*\* Mossy Lake is excluded from the waters of the United States as defined by 40 C.F.R. § 120.2 because it functions as a component of GP's waste treatment system.

Plate	Map Inset	Waterbody	Variation
GC-4	5	Dodson Creek - from headwaters to confluence with Saline River	Critical season DO 3 mg/L
GC-4	14	Town Creek below Acme tributary	Sulfates 200 mg/L, TDS 700 mg/L
GC-4	14	Unnamed tributary from Acme	Sulfates 330 mg/L, TDS 830 mg/L
GC-4	19	Alcoa unnamed tributary to Hurricane Creek and Hurricane Creek	See Rule 2.511
GC-4	20	Holly Creek	See Rule 2.511
GC-4	23	Saline River bifurcation	See Rule 2.511
GC-4	21	Dry Lost Creek and tributaries	See Rule 2.511
GC-4	22	Lost Creek	See Rule 2.511
GC-4	52	McGeorge Creek (headwaters to Willow Springs Branch)	Sulfate 250 mg/L, TDS 432 mg/L
GC-4	53	Willow Springs Branch (McGeorge Creek to Little Fourche Creek)	Sulfate 112 mg/L, TDS 247 mg/L
GC-4	54	Little Fourche Creek (Willow Springs Branch to Fourche Creek)	TDS 179 mg/L

#### **Temporary Variations Supported by Environmental Improvement Project**

Plate	Map Inset	Waterbody	Variation
GC-4	1	Holly Creek	Selenium chronic criteria 17µg/L
GC-4	2	Reyburn Creek from headwaters to confluence of Francois Creek	Sulfates 250 mg/L, TDS 500 mg/L*
GC-4	3	Scull Creek from a point approximately 350 feet upstream of Clearwater Lake to Clearwater Lake (including Clearwater Lake) and from Clearwater Lake dam to confluence Reyburn Creek	Sulfates 250 mg/L, TDS 500 mg/L*

\*These temporary standards variations are effective for 148 months from EPA's approval of the EIP on January 7, 2020.

## Index to Plates of the Delta

## DESIGNATED USES: DELTA ECOREGION

(Plates D-1, D-2, D-3, D-4, D-5)

### **Extraordinary Resource Waters**

Second Creek (D-4)

Cache River above Cache Bayou - adjacent to natural areas (D-3)

Arkansas River below Norrell Lock and Dam (Dam #2) (D-5)

Strawberry River (D-1)

Two Prairie Bayou adjacent to natural areas (D-3)

### **Natural and Scenic Waterways**

None

### **Ecologically Sensitive Waterbodies**

Lower St. Francis River and lower 10 miles of Straight Slough - location of fat pocketbook mussel (D-2, D-4)

Right Hand Chute at confluence with St. Francis River - location of fat pocketbook mussel (D-2)

Departee Creek - location of flat floater mussel (D-1)

Black River at mouth of Spring River - location of pink mucket mussel (D-1)

**Channel-altered Delta Ecoregion Streams** - These include the majority of the streams in this ecoregion and are characterized by substantial alteration of the morphology of their main-stream channel as well as their tributary streams. Such alteration of the tributaries of these streams significantly affects the water quality and hydrology of the streams and their watersheds. Most of the upper segments of these waters have been dredged and straightened into ditches. Additionally most of the tributaries of these streams have been straightened, ditched and, in some cases, rerouted to quickly move water off the agriculture fields and into the major streams. In the lower segments of these waters, channel realignment is less expansive but most of these channels have been “snagged” to remove any in-stream obstructions (brush, logs, and other debris) and the stream channel and banks have been dredged to uniform depths and cleared of any obstructions. These include Cache River, Bayou DeView, Village Creek, Blackfish Bayou and others to be determined by the Division on a case by case basis.

**Primary Contact Recreation** - all streams with watersheds of greater than 10 mi<sup>2</sup> and all lakes/reservoirs\*\*

**Secondary Contact Recreation** - all waters\*\*

**Domestic, Industrial and Agricultural Water Supply** - all waters\*\*

### **Aquatic Life\*\***

**Trout Waters** - none

**Lakes and Reservoirs** - all

#### **Streams**

Seasonal Delta aquatic life - all streams with watersheds of less than 10 mi<sup>2</sup> except as otherwise provided in Rule 2.505

Perennial Delta aquatic life - all streams with watersheds 10 mi<sup>2</sup> or larger and those waters where discharges equal or exceed 1cfs

\*\*Except for those waters with designated use variations supported by Use Attainability Analysis or other investigations.

**Site Specific Designated Use Variation Supported by Use Attainability Analysis**

<b>Plate</b>	<b>Map Inset</b>	<b>Waterbody</b>	<b>Variation</b>

ARKANSAS POLLUTION CONTROL AND ECOLOGY COMMISSION

**RULE 2**

**APPENDIX B**

**Environmental Improvement Project**

**APPENDIX B: ENVIRONMENTAL IMPROVEMENT PROJECT**

Stricken language would be deleted from present law. Underlined language would be added to present law  
State of Arkansas *As Engrossed: S2/21/97*

81st General Assembly **A Bill** ACT 401 OF 1997  
Regular Session, 1997 HOUSE BILL 1563

By: Representatives Sheppard, Wallis, Lancaster, Johnson, and Horn  
By: Senator Mahony

**For An Act To Be Entitled**

"AN ACT TO ENCOURAGE LONG-TERM ENVIRONMENTAL PROJECTS; AND  
FOR OTHER PURPOSES."

## Subtitle

"AN ACT TO ENCOURAGE LONG-TERM  
ENVIRONMENTAL PROJECTS."

BE IT ENACTED BY THE GENERAL ASSEMBLY OF THE STATE OF ARKANSAS:

## SECTION 1. Legislative Findings and Intent.

The General Assembly hereby finds that many areas of the state would benefit from long-term environmental remediation projects that significantly improve the effects caused by industrial or extractive activities. However, commitments by private enterprise to remedy such damages are discouraged by the prospect of civil liability based upon rigid application of state water quality standards to the enterprises activities. The purpose of this act is to preserve the states approach to establishing water quality standards, while also encouraging private enterprises to make significant improvements to closed or abandoned sites that are of such magnitude that more than three (3) years will be required to complete the project.

## SECTION 2. Definitions and Applicability.

For the purposes of this act:

(1) "Long-term Improvement Project" or "Project" means any remediation or reclamation project at closed or abandoned:

- (A) Mineral Extraction Sites;
- (B) Solid Waste Management Units as defined pursuant to the Arkansas Hazardous Waste Management Act;
- (C) Oil and Gas Extraction Sites;
- (D) Brownfield Sites as defined in Act 125 of 1995 or as may be amended; and
- (E) Hazardous Substance Sites listed on the National Priority List (42 U.S.C. Section 9605), or State Priority List (Arkansas Code 8-7-509(e), or as may be amended.

(2) "Water Quality Standard" means standards developed through administrative rulemaking by the Commission;

(3) "Commission" means the Arkansas Pollution Control and Ecology Commission; and

(4) "Department" means the Arkansas Department of Pollution Control and Ecology.

1           SECTION 3. Procedures for approval of environmental projects, contents of  
2 applications, and public notice.

3           (a) A petitioner seeking approval of a change in water quality standards to accommodate  
4 a long-term environmental improvement project shall file with the Department a Notice of Intent,  
5 which includes as a minimum:

6                   (1) A description of the water body or stream segment affected by the project;

7                   (2) The existing ambient water quality for the use of criteria at issue;

8                   (3) The affected water quality standard;

9                   (4) The modifications sought;

10                  (5) The proposed remediation activities;

11                  (6) A proposed Remediation Plan, which shall contain:

12                   (A) A description of the existing conditions, including identification of  
13 the conditions limiting the attainment of the water quality standards;

14                   (B) A description of the proposed water quality standard modification,  
15 both during and post project;

16                   (C) A description of the proposed remediation plan; and

17                   (D) The anticipated collateral effects, if any, of the Remediation Plan; and

18                  (7) A schedule for implementing the Remediation Plan that ensures that the post  
19 project water quality standards are met as soon as reasonably practicable.

20           (b) The department shall cause notice of the proposed project and associated water  
21 quality standard changes described in subsection (a) to be published for public notice and  
22 comment in the same manner as provided for permit applications in Arkansas Code 8-4-203(b),  
23 and shall advise the public that the details of the proposed project are available for public review.

24           (c) After considering comments from the public, the department shall notify the  
25 petitioner as to whether the proposed project is approved or denied. The department may deny  
26 approval of a project if it reasonably concludes that the plan is not complete, the plan is not  
27 technically sound, the schedule is unrealistic, the plan will not have an overall beneficial effect  
28 for the environment, or other appropriate reasons. Any department determination on the  
29 approval or denial of a project is subject to the appeal procedures applicable to permitting  
30 decisions set out in Arkansas Code 8-4-205.

31           (d) Upon approval of the project for further development, the petitioner shall prepare  
32 documentation required for third-party rulemaking by Arkansas Code 8-4-202 and established in  
33 administrative procedures.  
34

35           SECTION 4. Modification of Water Quality Standards.

36           (a) The commission may approve a modification where the water quality standard is not  
37 being maintained due to conditions which may, in part or in whole, be corrected through the  
38 implementation of long-term measures. The commission shall establish such subcategory of use  
39 and modify such general and specific standards as it deems appropriate to reflect such  
40 modification while ensuring that the fishable/swimmable use is maintained. In all water quality  
41 standard changes associated with long-term environmental projects, the remedial action plan  
42 described in subsection (a) of Section 3 of this act shall be incorporated by reference in the  
43 statement of basis and purpose of the rule and shall be considered an essential condition of the  
44 modified water quality standard.

45           (b) Once the commission approves a water quality standard modification, the department  
46 shall ensure that conditions and limitations designed to achieve compliance with the plan are

1 established in applicable discharge permits, consent administrative orders, or such other  
2 enforcement measures deemed appropriate by the department. The department may allow  
3 modifications by the petitioner to the remediation plan and schedule as is deemed appropriate,  
4 provided that any such modifications to the original remedial action plan shall not render the  
5 project significantly less protective of the applicable use subcategory. Should the department  
6 find that the petitioner is not acting in good faith to complete the project in accordance with the  
7 approved plan, applicable and appropriate enforcement authority may be exercised subject to  
8 appeal to the commission.

9 (c) The department or the petitioner shall report annually to the commission on the  
10 progress of the project.

11  
12 SECTION 5. Project Completion.

13 At the end of the project the post project water quality standards shall be in full force and  
14 effect.

15  
16 SECTION 6. All provisions of this act of a general and permanent nature are amendatory  
17 to the Arkansas Code of 1987 Annotated and the Arkansas Code Revision Commission shall  
18 incorporate the same in the Code.

19  
20 SECTION 7. If any provision of this act or the application thereof to any person or  
21 circumstance is held invalid, such invalidity shall not affect other provisions or applications of  
22 the act which can be given effect without the invalid provision or application, and to this end the  
23 provisions of this act are declared to be severable.

24  
25 SECTION 8. All laws and parts of laws in conflict with this act are hereby repealed.

## **Scientific Names of Aquatic Biota**

## APPENDIX C: SCIENTIFIC NAMES OF AQUATIC BIOTA

<b><u>Common Name</u></b>	<b><u>Species</u></b>	<b><u>Family</u></b>
Banded sculpin	<i>Cottus carolinae</i>	Cottidae
Banded pygmy sunfish	<i>Elassoma zonatum</i>	Elassomatidae
Bigeye shiner	<i>Notropis boops</i>	Cyprinidae
Black redhorse	<i>Moxostoma duquesnei</i>	Catostomidae
Blackside darter	<i>Percina maculata</i>	Percidae
Blacktail redhorse	<i>Moxostoma poecilurum</i>	Catostomidae
Blacktail shiner	<i>Cyprinella venusta</i>	Cyprinidae
Bleeding shiner	<i>Luxilus zonatus</i>	Cyprinidae
Bluegill	<i>Lepomis macrochirus</i>	Centrarchidae
Bluntnose minnow	<i>Pimephales notatus</i>	Cyprinidae
Bluntnose darter	<i>Etheostoma chlorosoma</i>	Percidae
Cardinal shiner	<i>Luxilus cardinalus</i>	Cyprinidae
Carp	<i>Cyprinus carpio</i>	Cyprinidae
Channel catfish	<i>Ictalurus punctatus</i>	Ictaluridae
Creek chubsucker	<i>Erimyzon oblongus</i>	Catostomidae
Creole darter	<i>Etheostoma collettei</i>	Percidae
Current River darter	<i>Etheostoma uniporum</i>	Percidae
Drum	<i>Aplodinotus grunniens</i>	Sciaenidae
Dusky darter	<i>Percina sciera</i>	Percidae
Duskystripe shiner	<i>Luxilus pilsbryi</i>	Cyprinidae
Emerald shiner	<i>Notropis atherinoides</i>	Cyprinidae
Fantail darter	<i>Etheostoma flabellare</i>	Percidae
Flier	<i>Centrarchus macropterus</i>	Centrarchidae
Freckled madtom	<i>Noturus nocturnus</i>	Ictaluridae
Gizzard shad	<i>Dorosoma cepedianum</i>	Clupeidae
Golden redhorse	<i>Moxostoma erythrurum</i>	Catostomidae
Redfin pickerel	<i>Esox americanus</i>	Esocidae
Gravel chub	<i>Erimystax x-punctatus</i>	Cyprinidae
Green sunfish	<i>Lepomis cyanellus</i>	Centrarchidae
Greenside darter	<i>Etheostoma blennioides</i>	Percidae
Largemouth bass	<i>Micropterus salmoides</i>	Centrarchidae
Longear sunfish	<i>Lepomis megalotis</i>	Centrarchidae
Longnose darter	<i>Percina nasuta</i>	Percidae
Madtoms	<i>Noturus sp.</i>	Ictaluridae
Mosquitofish	<i>Gambusia affinis</i>	Poeciliidae
Northern hogsucker	<i>Hypentelium nigricans</i>	Catostomidae
Northern studfish	<i>Fundulus catenatus</i>	Fundulidae
Orangebelly darter	<i>Etheostoma radiosum</i>	Percidae
Orangebelly darter	<i>Etheostoma radiosum</i>	Percidae
Orangethroat darter	<i>Etheostoma spectabile</i>	Percidae
Ozark madtom	<i>Noturus albat</i>	Ictaluridae
Ozark minnow	<i>Notropis nubilus</i>	Cyprinidae

**Common Name**

Pirate perch  
Pugnose minnow  
Rainbow darter  
Redfin darter  
Redfin shiner  
Ribbon shiner  
"Rock basses"  
Scaly sand darter  
Shadow bass  
Slender madtom  
Slough darter  
Smallmouth bass  
Smallmouth buffalo  
Southern redbelly dace  
Spotted bass  
Spotted sucker  
Spotted sunfish  
Spotted gar  
Strawberry River darter  
Striped shiner  
Tadpole madtom  
Warmouth  
Wedgespot shiner  
Whitetail shiner  
Yellow bullhead

**Species**

*Aphredoderus sayanus*  
*Opsopoeodus emiliae*  
*Etheostoma caeruleum*  
*Etheostoma whipplei*  
*Lythrurus umbratilis*  
*Lythrurus fumeus*  
*Ambloplites sp.*

# **RULE 2**

# **APPENDIX E**

**Criteria to be Considered in Determining Whether the  
Designated Use of Extraordinary Resource Water,  
Ecologically Sensitive Waterbody, or Natural and  
Scenic Waterway Should be Maintained**

**APPENDIX E: CRITERIA TO BE CONSIDERED IN  
DETERMINING WHETHER THE DESIGNATED USE OF  
EXTRAORDINARY RESOURCE WATER, ECOLOGICALLY  
SENSITIVE WATERBODY, OR NATURAL AND SCENIC  
WATERWAY SHOULD BE MAINTAINED**

The determination of whether a designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway should be maintained in a given waterbody must be made on a case by case basis. At least 180 days prior to filing any petition authorized under Rule 2.310 to initiate rulemaking with the Commission to remove the designated use of Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway from a free flowing waterbody for the purpose of constructing a reservoir to provide a domestic water supply, the petitioner shall submit to the Division information and supporting documentation which address each of the following:

- (A) Describe generally and specifically the state of the existing water quality;
- (B) Identify the presence of key and indicator species of fish adapted to flowing water systems and state the extent to which these species are present in the waterbody;
- (C) Describe the extent to which water quality and physical habitat, including wetlands, support other plant or animal life and identify the species;
- (D) Identify the presence of, and state the extent to which, other wildlife uses are dependent upon the waterbody;
- (E) State the extent to which water quality and physical habitat support threatened, endangered, or endemic aquatic or semi-aquatic species and identify those species;
- (F) Specify the extent to which the waterbody supports a high diversity of aquatic species and identify the presence and frequency of the species;
- (G) Describe and identify the extent to which physical or chemical characteristics of the waterbody provide an unusual or uncommon aquatic habitat;
- (H) Describe the extent to which physical or chemical characteristics give the waterbody unusual or unique aesthetic attributes;
- (I) Specify the extent of the use of the waterbody for recreation in or on the water, such as fishing, swimming, and boating (including but not limited to canoeing, kayaking, or rafting), or use of the waterbody for commercial activity, including tourism;
- (J) Identify and describe the intangible social values associated with the free flowing characteristics of the waterbody;
- (K) Identify the presence and location of gorges, rapids, waterfalls, or other significant geologic features;
- (L) Identify the presence and location of scenic areas and sites potentially impacted by the reservoir;
- (M) Identify the presence and location of rare and/or irreplaceable natural areas potentially impacted by the reservoir;

- (N) Identify the presence and location of known archeological sites potentially impacted by the reservoir;
- (O) Identify the presence and location of historic resources potentially impacted by the reservoir;
- (P) Delineate the extent to which the waterbody is located within the boundaries of, flows through, or is adjacent to state or federal forest land, parks, natural areas, nature preserves, refuges, or wildlife management areas;
- (Q) Describe the extent to which the waterbody is used for educational, scientific, or research purposes;
- (R) Identify the waterbody's use or potential use as an ecoregion reference stream;
- (S) Describe the land uses, and the geographical extent of each, occurring within the watershed;
- (T) Identify the presence and location of all permitted point sources discharging to the waterbody;
- (U) Identify the presence and location of existing alterations, diversions or man-made impoundments; and
- (V) Provide the frequency of occasions when there is no natural flow in the waterbody, and the Q7-10 flow values for the waterbody.

# **RULE 2**

## **APPENDIX F**

**Factors Considered In Adding the Designated Use of  
Extraordinary Resource Water, Ecologically Sensitive  
Waterbody, or Natural and Scenic Waterway to a  
Waterbody or Waterbody Segment**

## **APPENDIX F: FACTORS CONSIDERED IN ADDING THE DESIGNATED USE OF EXTRAORDINARY RESOURCE WATER, ECOLOGICALLY SENSITIVE WATERBODY, OR NATURAL AND SCENIC WATERWAY TO A WATERBODY OR WATERBODY SEGMENT**

The Commission shall consider the following supporting documentation in determining whether a waterbody should be designated as an Extraordinary Resource Water, Ecologically Sensitive Waterbody, or Natural and Scenic Waterway:

- (A) Location – The waterbody is within the boundaries of or flows through or is adjacent to state or federal forest land, parks, natural areas, nature preserves, refuges, or wildlife management areas, or the watershed may include remote, primitive, or relatively undeveloped areas;
- (B) Existing water quality – pristine, naturally-occurring, or unique;
- (C) Ecological value – The presence of water quality and physical habitat that supports threatened, endangered, or sensitive species, the presence of any threatened, endangered, or sensitive species, and/or water quality that supports an exceptional high diversity of aquatic species (fish or benthic macroinvertebrates) as categorized by an appropriate index of biological integrity (IBI) protocol;
- (D) Presence of physical or chemical characteristics that provide an unusual or uncommon aquatic habitat;
- (E) Special attributes of the waterbody that make it an outstanding resource, including but not limited to the presence of archeological sites, historical sites, or rare or valuable wildlife habitat;
- (F) Aesthetic Value- the presence of scenic areas or sites or scenic beauty resulting from natural features of the basin such as flow, topography, geology, ecology, physiography (i.e., waterfalls, gorges, rapids, or other special features), or the presence of characteristics giving the waterbody unique or unusual attributes;
- (G) Recreational Value- Use of the waterbody for:
  - (1) Fishing, rafting, kayaking, camping, family outings, backpacking, bird watching, etc.,
  - (2) Presence of hiking trails or scenic road or highway alongside, and
  - (3) Attracting tourism;
- (H) Use of the waterbody for educational, scientific, or research purposes;
- (I) Presence of rare and/or irreplaceable natural areas; and
- (J) Impacts the designation may have on current uses, upstream users, downstream users, and potential future uses of the waterbody or waterbody segment.
