Subject: Buffalo River watershed moratorium
Date: Saturday, September 14, 2019 10:14:09 PM

- The karst geology in the Buffalo river area makes it unsuitable for concentrated animal feeding operations due to the many caves, springs and underground streams.
 - Soils in the Buffalo watershed are thin and are thus unable to contain the large amounts of animal waste that are produced by CAFOs.
 - Permitting C&H was an admitted mistake. Only a ban on this type of facility can ensure that the mistake is not repeated in the future.
- I completely agree with the above. The Buffalo river is a jewel and doesn't need to be polluted by hog manure. Many people rely on the tourists who float and enjoy the river. Many many more than are employed by hog farms. I think the moratorium on medium to big hog farms needs to be upheld. Thank you.
