Subject: Buffalo River Moratorium
Date: Monday, September 23, 2019 10:04:30 AM

Not only is potable water one of the most endangered human needs, but we must begin shifting away from meat consumption and support local markets. CAFOs only continue our agricultural activities in the wrong direction. The 2019 IPCC report makes it very clear that current agricultural practices are a primary negative factor in combating climate change. The moratorium on CAFOs should be permanent.
