**Subject:** Buffalo River watershed moratorium  
**Date:** Sunday, September 15, 2019 10:13:39 AM

---

- The karst geology in the Buffalo river area makes it unsuitable for concentrated animal feeding operations due to the many caves, springs and underground streams.
- Soils in the Buffalo watershed are thin and are thus unable to contain the large amounts of animal waste that are produced by CAFOs.
- Permitting C&H was an admitted mistake. Only a ban on this type of facility can ensure that the mistake is not repeated in the future.
