Subject: Buffalo River watershed moratorium
Date: Sunday, September 15, 2019 2:14:25 PM

I support making the moratorium on hog CAFOs permanent. The reasons for closing the C&H hog farm and installing the moratorium remain very valid. Karst geology is characterized by cracks and seeps and our soil is thin and ineffective at absorbing large volumes of animal waste. Too much leaks down to the water table or nearest creek. I have concerns about other concentrated, high-volume animal operations as well.

Thank you for allowing public comment on this issue.
