

Dear Mr. Szenher,

My comments relate to Reg. 6, Act 954, proposed changes to APC&EC Reg. 6. Most of the revisions proposed to conform to provisions in Act 954 appear to impede ADEQ's ability to protect our water, which I do understand that Act 954 itself attempts to undermine.

Pamela E. Stewart

> Lack of water is expected to be the next crisis. Arkansas now has water it needs, but bordering states are already looking to Arkansas to supplement their supplies. Future population growth and agriculture will put more demands on the supply. Relaxing regulations to allow more pollution of any kind would be extremely dangerous. All streams should be kept as pure as possible. Businesses which create waste should pay for treatment on their own properties, rather than using streams as free garbage disposal for taxpayers to clean up somewhere downstream.
