Subject: Reg 6 Notification Changes Comments

Dear Commissioners, Thank-you for fulfilling your mission to protect the air and water quality of Arkansas.

Regarding the proposed changes to Arkansas Pollution Control and Ecology Commission Regulation 6 to include notification procedures whenever an applicant files a Notice of Intent to apply for a General Permit for a Concentrated Animal Feeding Operation.

I support the proposed changes for notification changes in Regulation 6.

I request the following additions:

- 1)Administrators of State and federal lands within 20 miles of the facility or within the watershed of the facility be notified
- 2) The Arkansas Department of Health should be notified.
- 3) Adequate Public Notification in the newspaper with the largest circulation,done no more than 30 days prior to submission of the NOI, in the county or counties where the facility and the spray fields are located
- 4)Water authorities that may be impacted by placement of such facility. This could extend into other Arkansas counties and even other states whose water source may be impacted.
